Re: Lead Service Line Replacement Plan
City of Lake Forest, Illinois

Dear Mr. Martin:

Enclosed is an electronic copy of the revised Lead Service Line Replacement Plan for the City of Lake Forest as required by the Illinois Environmental Protection Agency.

Please call 815-744-4200 with questions.

Sincerely,

STRAND ASSOCIATES, INC.®

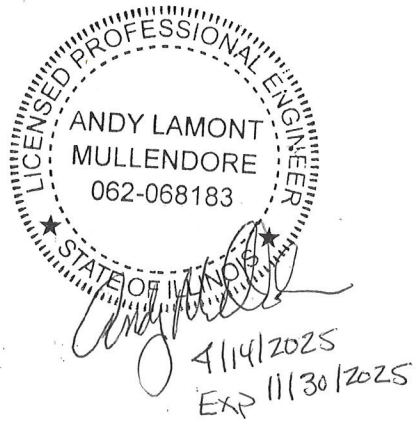

Brian L. Hackman, P.E., P.H., BCEE

APPENDIX A–LEAD SERVICE INFORMATION SUMMARY (2024)
APPENDIX B–LETTER OF ACKNOWLEDGEMENT
APPENDIX C–OPCC (2024)
APPENDIX D–IEPA CHECKLIST (2024)
APPENDIX E–2025 INFORMATION AND INVENTORY UPDATE

The following report has been commissioned by the City of Lake Forest, Illinois (City) to meet all sections required by 415 Illinois Compiled Statutes (ILCS) 5 Section 17.12 of the Environmental Protection Act as administered by the Illinois Environmental Protection Agency (IEPA). This report includes updates since the April 2024 report accepted by the IEPA.

CITY COMMUNITY WATER SUPPLY DETAILS

The home rule community of the City is supplied drinking water through its surface water treatment facilities on Lake Michigan in Lake County. The municipal utility is Public Water System Identification Number No. IL0970800 with 6,927 residential and 288 commercial service connections serving approximately 19,367 people.

The City has a water system comprised of the following infrastructure:

1. Lake Michigan source intake
2. 14-million-gallon-per-day (MGD) water treatment plant (WTP) and high lift pumps
3. Distribution system
4. Emergency interconnections with the City of Highland Park and Village of Lake Bluff
5. 1.5-million-gallon (MG) elevated tank
6. 1.5-MG ground storage tanks and 4-MGD pumping system

The City does not own lead service lines or leads within the City. In accordance with City Ordinance §51.075, the water system customers own and control the entire length of service lead from the City's water main to their residence or business. The City also takes a proactive role in notifying customers of opportunities to replace lead service lines with water main replacement projects and emergency repairs, as outlined in Illinois Administrative Code (IAC) Title 35: Part 611 Section 354.

Table 1 identifies the total number of suspected and known private lead service lines and private lead service lines identified by the City, including quantities identified as of April 2025.

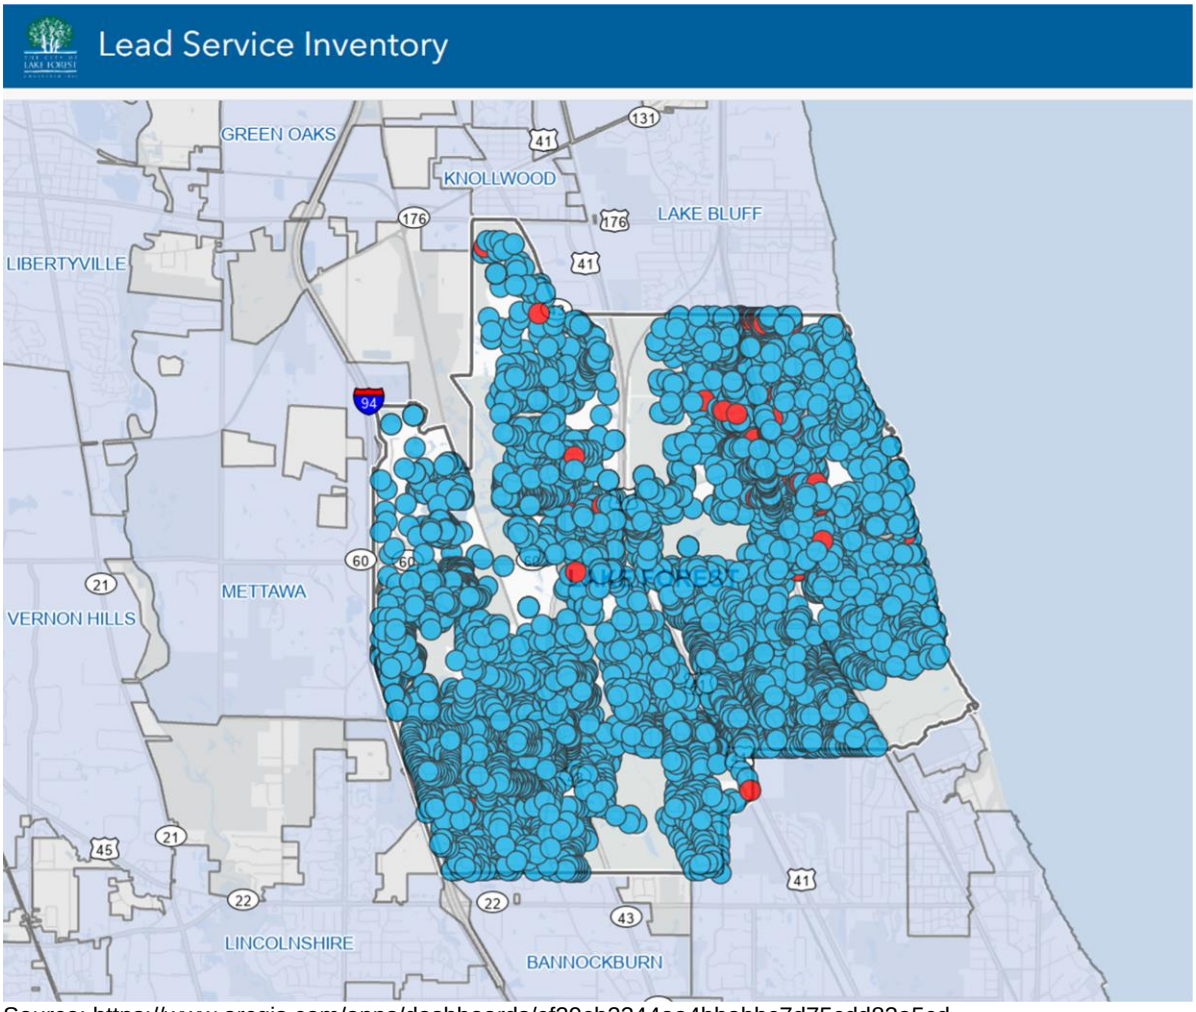

Description	Quantity (Valve to House, 2024)	Updated Quantities (April 2025)
Known Non-Lead Services	6,615	6,644
Known Lead Services	274	250
Unknown Services	37	31
Total Services	**6,926**	**6,925**

Table 1 Drinking Water Services–Summary (as of April 2025)

The shift in service quantities occurred because of additional effort and error checking with the 2024 data, resulting in high unknown services and an overall reduction in lead services by replacement.

Figure 1 shows the location of the various lead service lines identified in Table 1, as shown through the City's ArcGIS Web site:

https://www.arcgis.com/apps/dashboards/cf29cb2344aa4bbabbc7d75cdd83a5cd

Source: https://www.arcgis.com/apps/dashboards/cf29cb2344aa4bbabbc7d75cdd83a5cd

Figure 1 City's Geographic Information System (GIS) Lead Service Inventory Mapping

Appendix A includes the summary of identified lead service information available at the time of this report. The lead service inventory is being reviewed and updated as new information is discovered, lead service lines are replaced, or as other activity occurs that reduces the number of lead services installed.

LEAD SERVICE LINE EDUCATION AND PUBLIC INVOLVEMENT

Given the concerns for lead services, the City has developed information that is available on its Web page that educates the public about the potential risks of lead services and action steps to address lead drinking water contamination. The City's public education action plan identifies educational materials on lead in drinking water, how customers can test their drinking water, sources of lead within a customer's water system (e.g., leaded brass and lead solder joints), and how to and which portions of the public to educate about the risk of lead in drinking water based on United States Environmental Protection Agency (USEPA) and American Water Works Association (AWWA) guidance. The link to the City's Lead Service Line Replacement Web site is:

https://cityoflakeforest.com/departments/public_works/lead_service_line_replacement.php

Using AWWA guidance language, the City notifies its customers if a lead service is identified and disturbed by the City, but not replaced, as a result of water main replacement and repair activities. There are no specific requirements in the IAC requiring utilities to perform public notification if a lead service pipe is disturbed. However, guidance from USEPA indicates that disturbed lead services may release elevated concentrations of lead, often as particulates, into a customer's water system for some time after the event. Guidance for the homeowner should include information on how to flush the homeowner's system and use of filtration to reduce potential exposure to lead in drinking water.

As water main replacement projects are undertaken, the City notifies customers approximately 2 to 3 months, and again at 2 to 3 weeks, in advance of a project by letter. The day before the water main replacement, staff will attempt to contact homeowners directly by going door-to-door. During water main replacement projects, the existing service is removed from the main to the curb stop (B-box) and replaced with a new 1 1/2-inch copper service from the curb stop to the new water main. Following shut-off and restoration of service, staff conduct a 5-minute flush at a tap located within the residence of the affected homeowner. The tap aerator is typically removed for flushing and staff indicated that they monitor water temperature to confirm the water is cold before the flushing is complete.

For emergency water main repairs, staff work quickly to isolate the affected water main for repairs. In an effort to notify impacted homeowners, City staff go door-to-door or place door hangers notifying customers of the event. If a lead service is identified during emergency repairs, the existing service is left in place as crews work around the area.

As an option, the City Council may consider implementing ordinances that identify the presence of a lead service to a potential homebuyer for potential mitigation purposes during the sale of the property.

LEAD SERVICE LINE REPLACEMENT PLAN

City staff have actively engaged City Council members regarding lead in drinking water and gaining approval for staff efforts to develop the action plan. This plan is a result from various levels of discussion from public meetings and workshops to one-on-one discussion between staff and homeowners. The information, as posted on the City's Web site, is intended to help homeowners who have lead-based materials (e.g., leaded brass or lead solder) within their homes, through identification of the affected properties.

The City will encourage lead line replacement in accordance with the State of Illinois statute and USEPA rulemaking when identified during water main replacement or emergency repairs. However, the City does not maintain or control ownership of the private service leads as identified previously. The City will develop detailed plans considering the USEPA's rulemaking status between the Lead and Copper Rule Revisions (LCRR) and the Lead and Copper Rule Improvements (LCRI) proposed regulations.

When the City voluntarily replaces portions of a customer's lead service line, it is recommended, but not necessarily required, to follow the requirements of IAC: Section 611.354.d. This specific portion of the regulation calls out a lead service line notification process prior to the commencement of work and additional sampling requirements upon completion. The first step in the lead service replacement process is to notify the homeowner 45 days before the work. In emergency situations, attempts to notify the affected homeowners with lead services should be made at the time of repair. Guidance language for

developing customer notification letters and door hangers is provided in AWWA's guidance titled *Communicating About Lead Service Lines: A Guide for Water Systems Addressing Service Line Repair and Replacement*. Under both standard and emergency conditions, the regulation requires that the City recommend replacement of the customers' lead service line at the customers' cost.

When the transfer of a property occurs, the City is requiring the landowners to file an affidavit acknowledging the presence of lead service lines associated with the property. The City's best approach to lead service line replacement may result in encouraging homeowners to negotiate lead service replacement with the sale and transfer of a property, similar to how basement radon issues have been dealt with over decades. A copy of the City's notice and affidavit is shown in Appendix B.

Once a partial lead service replacement is completed, a service line sample for lead in drinking water using a certified laboratory, paid for by the City, is required within 72 hours. The sample results are to be reported to the customer within 3 business days after the receipt of the result and to the IEPA (as required under IAC: Section 611.360.e.4). Typical sampling costs from a certified laboratory are in the range of $20 to $100 per sample.

IEPA may request additional information following a result submission to verify that all partial lead service line replacement activities have taken place. Depending on the result of the partially replaced lead service sample, (i.e., greater than 15 micrograms per liter [μg/L] lead), the City may want to supply the homeowner with additional information that describes steps than can be taken to reduce exposure to drinking water lead within the home.

If public water supply users would choose to replace lead services within the City, the approximate opinion of probable construction cost (OPCC) for replacement within 1 year is approximately $3,140,000, based on April 2024 identified services needing replacement. A breakdown of properties and approximate cost of replacement is provided in Appendix C.

Given the status of the LCRR (agreed to by the current USEPA administration), and LCRI (as proposed by the current USEPA administration), the City can now focus on a 10-year replacement value starting November 2027 in accordance with the promulgated USEPA LCRI for IEPA that establishes what will be required and timelines for implementation. Depending on homeowner participation, the following represents the homeowner burden for complying with the LCRR requirements evenly spread over the 3-, 5-, 7-, 10-, 15-, 20-, 25-, or 30-year period (Table 2). The present value of the lead service line probable costs can be converted to an annual replacement cost based on the economic formula:

$$\text{Annual Payment (\$)} = PV / ((1+i)*n-1) / (i*(1+i)*n)$$

Where:

i = effective interest rate
n = duration of period, years
PV = OPCC in $

These costs are further compounded by interest-bearing loans that property owners choose in funding options 2 and 4, which are provided in the following section.

Table 2 summarizes the OPCC of total system replacement of lead and unknown service lines based on duration of replacement period, if this can be established as a requirement through either IEPA or USEPA regulations. Given the length and size of lead-services, the annual dollar amounts for replacement over a particular period indicates that the actual number of replacements by year may vary.

The 10-year period is highlighted in Table 2 to demonstrate the LCRI replacement period.

Duration of Potential Replacement Period (Years)	Total Future Value for Potential Replacement	Probable Annual Replacement Rate in $
1	$3,330,000	$3,330,000
3	$3,530,000	$1,175,000
5	$3,730,000	$750,000
7	$3,940,000	$570,000
10	$4,270,000	$430,000
15	$4,850,000	$330,000
20	$5,480,000	$280,000
25	$6,150,000	$250,000
30	$6,850,000	$230,000

Table 2 Replacement OPCC Based on Potential Replacement Rate (I=6 percent)

The actual performance of any lead service line replacement is a matter of means and methods selected by the homeowner. The City recognizes that homeowners may directionally drill, pipe burst, pull through, open-trench, or a combination of the various methods for their particular property and situation. Homeowners will be encouraged by local resources to understand the risks and benefits of the replacement methods being proposed by individual contractors.

To date, the 2025 inventory already identifies a reduction in lead services by a total of 22 (or 8 percent) of the 274 total lead services identified. This replacement represents a burden of approximately $226,500 in 2025 dollars.

LEAD SERVICE LINE REPLACEMENT FUNDING

As the City does not own lead services, it is recommending to its customers to seek the following avenues for funding replacement, including:

1. Self-funding replacement.
2. Residential loans against the value of the property and improvements.
3. As a matter of sale and purchase price of a property and improvements.

Given that the City is not a financial institution, property owners will find commercial and private banking to be more competitive than municipal funding. Thus, the City has considered different scenarios for structuring payments, as itemized previously. However, the terms and condition of payment will be encouraged by private institutions available, by law, to the property owners when possible.

The marketplace affordability of replacement work will in-turn be driven by the competitive price nature of Illinois-licensed plumbers, required to submit a City permit for site and plumbing modifications for inspection by Lake County in order to meet the demand for lead service replacement as selected by the private property owners. Each plumbing contractor is in-turn responsible for meeting applicable Illinois regulations related to diversity and inclusion, (for example, Equal Opportunity Employment, Drug Free Workplace, and Sexual Harassment).

FACILITY SAMPLING AND COMPLIANCE

High-risk facilities including preschools, day care centers, group day care homes, parks, playgrounds, hospitals, and clinics are regulated by the Illinois Department of Public Health (IDPH). These facilities are not part of or within the City's governance. The facilities remain responsible for their facilities connected to the public water supply to conduct the required sampling procedures. These facilities have sufficient public scrutiny to replace their lead services and promote the health and well-being of their students and staff in a responsible manner, along with IDPH oversight.

The City community water supply has not identified high-risk areas within the community that should be prioritized over others because USEPA has recognized that lead at any concentration in the water supply is a potential health concern for all. Each individual property is being identified for the presence of lead to allow property owners to make important decisions for themselves relative to their ownership of the lead services on their property.

Considering the City's past efforts in establishing Special Sanitary Service Assessment Areas, pursuit of local laws and ordinances to enforce replacement on private property will be faced with significant ownership challenges. Also, the current proposed LCRI proposal by USEPA suggests that compliance with the regulation is a matter of communication, not action. Without regulations in place, planning for specific private property lead service line replacements becomes the homeowner's responsibility and remains well outside of the control of the City. Depending on needs, the City will stay open to the idea of a special assessment or loan program, as appropriate, through Committee and City Council action.

City staff remain available to assist in educating the local critical care facilities regarding sampling techniques and certified laboratory information as appropriate.

Appendix D includes the IEPA checklist showing where items are included within this report for compliance purposes.

Appendix E includes updated information and inventory lists from April 2025.

Re: 123 Main St. (PIN 12-34-456-789) (the "*Property*")

The City of Lake Forest has received a request for a Real Estate Transfer Tax Stamp and a request to transfer the water bill for the above referenced Property from the Grantor to the Grantee. The City understands that this request is based on the fact that the Property is being acquired by the Grantee.

In reviewing the request for a Real Estate Transfer Tax Stamp for the Property, consistent with standard City procedures, the City has conducted a Cross Connection Sewer Inspection as required by City Code and reviewed relevant City records. Based on available City records, the above referenced Property is identified as having a lead water service line. The water service line connects the household plumbing to the City's publicly owned water main. Water service lines are privately owned and are the responsibility of the homeowner.

In accordance with the State of Illinois Lead Service Line Replacement and Notification Act (415ILCS5/17.12), the City provides notification to property owners and to buyers as part of the pre-sale City review process to assure all parties are aware of the presence, or believed presence, of lead water service lines and/or related components.

It is anticipated that in the future, owners of properties with lead water service lines will be required to remove and replace lead lines and any related lead components. In addition, lead

service lines are required to be removed and replaced in conjunction with significant alterations or additions to homes.

No action is required to remove the lead water service line at this time. The intent of this acknowledgement is to inform all parties of the likely presence of lead water service lines at the above referenced Property based on available City records.

Both the Grantor and Grantee acknowledge the information provided in this Letter of Acknowledgement as evidenced by the signatures on the following page.

The City is interested in working with you to facilitate this transfer of property consistent with the desires of both parties. Please contact me if you have any questions regarding this matter.

Sincerely,

Matt Goodman
Code Enforcement Officer
Inspection Supervisor
City of Lake Forest

Lead Service Line Replacement Plan Checklist

PWS ID No.: 0970800 Name: City of Lake Forest, Illinois

Lead Service Line Replacement Plan Self-Assessment

This section should be completed after your plan has been developed to ensure it meets all sections required by Section 17.12 of the Environmental Protection Act.

Please certify the inclusion of each lead service line replacement requirement and note the location in the appropriate box. Failure to include any required information in the lead service line replacement plan will result in the plan be rejected.

Initials	Location (e.g. Pg. 3 Para. 6)	**Please initial each box to confirm that that required section is included in the plan and include the page number and paragraph number for where that information can be found in the plan.**	Citation
BLH	Pg 1, ¶2	The name and identification number of the community water supply.	*415 ILCS 5/17.12 (q)(1)*

APPENDIX E
2025 INFORMATION AND INVENTORY UPDATE

THE CITY OF
LAKE FOREST
CHARTERED 1861

May XX, 2024

Lake Forest Resident
XXXXXXXXXXXXXXX
Lake Forest, IL 60045

Re: Lead Service Line Inventory

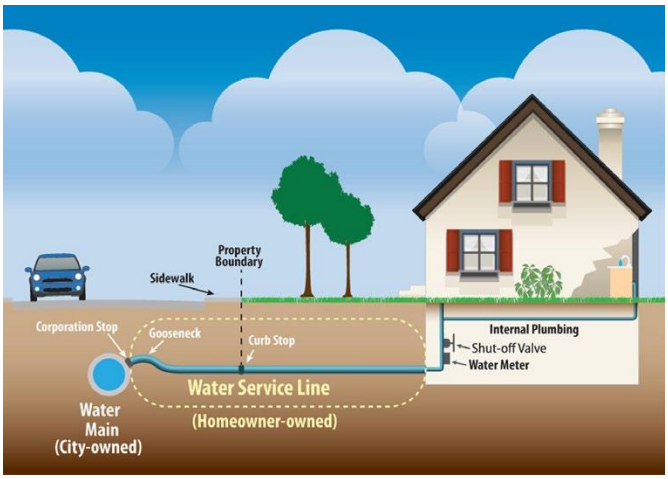

Dear Lake Forest Resident:

Thank you for taking the time to schedule a lead service verification earlier this year. Based on that verification, your property at <<address>> is one of around 400 properties served by the City of Lake Forest that has a privately-owned lead water service line connecting your household plumbing with the City's water main. If you have already replaced your lead service line or are in the process of doing so, you may disregard this message.

The State of Illinois is requiring the replacement of all lead service lines per the Lead Service Line Replacement and Notification Act (415ILCS5/17.12). In accordance with the statute, the City must notify property owners with a known or suspected lead service line once per year about the health effects of lead exposure. Attached is an official notice from the Illinois Environmental Protection Agency regarding the Health Effects of Lead.

Lead is not present in the City's treated drinking water or in the approximately 168 miles of water mains that deliver drinking water to Lake Forest homes and businesses. The City of Lake Forest provides clean, safe and reliable water to all Lake Forest residents and businesses.

Your water service line is the pipe that connects the City's water main in the street or parkway to your household plumbing (as illustrated in the graphic on the right). In Lake Forest, the water main is owned by the City. The entire water service line is owned, maintained, and repaired by the homeowner.

Find additional information about lead service line replacement, an interactive lead service inventory map where you can search for your address, and Frequently Asked Questions at cityoflakeforest.com/ServiceLines.

Thank you,

Daniel H. Martin
Superintendent of Public Works

ATTACHED: IEPA FACT SHEET

YOU ARE SERVED BY A LEAD SERVICE LINE

Health Effects of Lead

Exposure to lead in drinking water can cause serious health effects in all age groups. Infants and children can have decreases in IQ and attention span. Lead exposure can lead to new learning and behavior problems or exacerbate existing learning and behavior problems. The children of women who are exposed to lead before or during pregnancy can have increased risk of these adverse health effects. Adults can have increased risks of heart disease, high blood pressure, kidney, or nervous system problems. The most common exposure to lead is swallowing or breathing in lead paint chips and dust. However, lead in drinking water can also be a source of lead exposure. In the past, lead was used in some water service lines and household plumbing materials. Lead in water usually occurs through corrosion of plumbing products containing lead; however, disruption (construction or maintenance) of lead service lines may also temporarily increase lead levels in the water supply. This disruption may be sometimes caused by water main or service line maintenance/replacement.

Work on a lead service line may result in sediment, possibly containing lead from the service line in the building's water.

Below describes some information about some preventative measures you can take to help reduce the amount of lead in drinking water.

What you can do to reduce lead exposure in drinking water:

- *Run your water to flush out lead.*
  - flushing times can vary based on the length of your lead service line and the plumbing configuration in your home. The length of lead service lines varies considerably. Flushing for at least 5 minutes is recommended.
- *Use cold water for drinking, cooking, and preparing baby formula.* Do not cook with or drink water from the hot water tap, lead dissolves more easily into hot water. Do not use water from the hot water tap to make baby formula.
- *Look for alternative sources or treatment of water.* You may want to consider purchasing bottled water or a water filter that is certified to remove "total lead".
- *Clean and remove any debris from faucet aerators on a regular basis.*
- *Do not boil water to remove lead. Boiling water will not reduce lead.*
- *Purchase lead-free faucets and plumbing components.*
- *Remove the entire lead service line.*
- *Test your water for lead. Verify your service line.* Please call us at 847-810-4650 to find out how to get your water tested for lead.
- If test results indicate a lead level above 15 ug/L, bottled water should be used by pregnant women, breast-feeding women, young children, and formula-fed infants.

Re: Lead Service Line Inventory

Dear Lake Forest Resident:

The State of Illinois is requiring the replacement of all lead service lines per the Lead Service Line Replacement and Notification Act (415ILCS5/17.12). In accordance with the statute, the City is required to create a multi-year approach for replacing all the privately-owned lead service lines in the City.

Based on our records, your property at <<address>> is one of around 400 properties served by the City of Lake Forest that may have a privately-owned lead water service line connecting your household plumbing with the City's water main.

Per the Illinois statute, the City must notify property owners with a known or suspected lead service line once per year about the health effects of lead exposure. Attached is an official notice from the Illinois Environmental Protection Agency regarding the Health Effects of Lead.

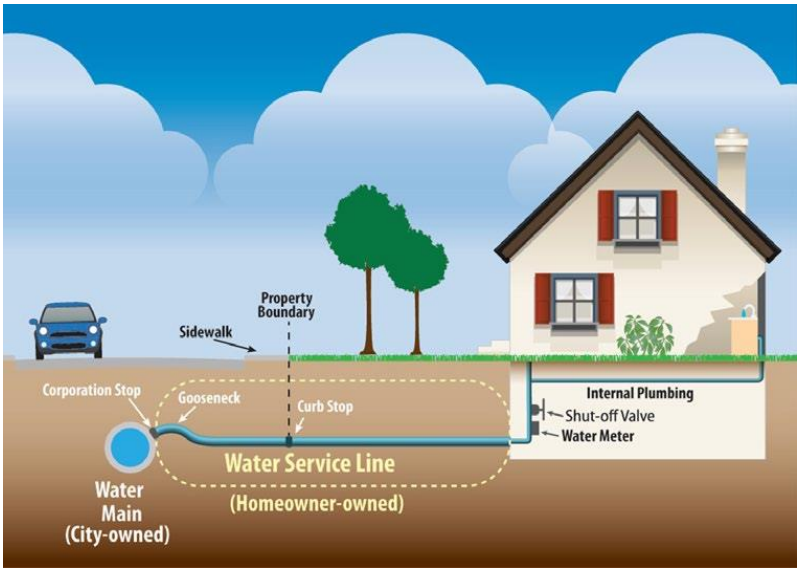

Earlier this year, you received a letter from the City regarding updating its records to identify properties with suspected lead service lines in Lake Forest. Lead is not present in the City's treated drinking water or in the approximately 168 miles of water mains that deliver drinking water to Lake Forest homes and businesses. The City of Lake Forest provides clean, safe and reliable water to all Lake Forest residents and businesses.

The City is scheduling inspections to verify the status of suspected lead service lines, as our records might not reflect repairs or replacements made after your original service line was installed. If you don't schedule an inspection, the City will assume your property has a lead service line and will submit that information to the Illinois Environmental Protection Agency in the required report.

Over the next 30 days, the City is scheduling inspections to verify service line materials. Please scan the QR code or visit appt.link/LF/lead-inspection to schedule an appointment. If you have any questions about scheduling, please contact Administrative Assistant Becky Pocasangre at (847) 810-3543 or pocasanb@cityoflakeforest.com.

For the City to confirm service material, Water & Sewer Section staff will need to enter your home to inspect near the water meter location. The verification takes only a few minutes. All City Employees will be wearing "City of Lake Forest" uniforms, arrive in a City vehicle, and will have their City IDs available.

Your water service line is the pipe that connects the City's water main in the street or parkway to your household plumbing (as illustrated in the graphic on the right). In Lake Forest, the water main is owned by the City. The entire water service line is owned, maintained, and repaired by the homeowner.

Find additional information about lead service line replacement, an interactive lead service inventory map where you can search for your address, and Frequently Asked Questions at cityoflakeforest.com/ServiceLines.

Thank you in advance for contacting us to schedule your service line verification.

YOU ARE SERVED BY AN UNKNOWN MATERIAL SERVICE LINE THAT MAY CONTAIN LEAD

Health Effects of Lead

Exposure to lead in drinking water can cause serious health effects in all age groups. Infants and children can have decreases in IQ and attention span. Lead exposure can lead to new learning and behavior problems or exacerbate existing learning and behavior problems. The children of women who are exposed to lead before or during pregnancy can have increased risk of these adverse health effects. Adults can have increased risks of heart disease, high blood pressure, kidney, or nervous system problems. The most common exposure to lead is swallowing or breathing in lead paint chips and dust. However, lead in drinking water can also be a source of lead exposure. In the past, lead was used in some water service lines and household plumbing materials. Lead in water usually occurs through corrosion of plumbing products containing lead; however, disruption (construction or maintenance) of lead service lines may also temporarily increase lead levels in the water supply. This disruption may be sometimes caused by water main maintenance/replacement.

Work on your service line may result in sediment, possibly containing lead from the service line in the building's water.

Below describes some information about the project and some preventative measures you can take to help reduce the amount of lead in drinking water.

What you can do to reduce lead exposure in drinking water:

- *Run your water to flush out lead.* If the plumbing in your home is accessible; you may be able to inspect your own plumbing to determine whether you have a lead service line or lead solder. Otherwise, you will most likely have to hire a plumber.
  - If you do not have a lead service line, running the water for 1 – 2 minutes at the kitchen tap should clear the lead from your household plumbing to the kitchen tap. Once you have done this, fill a container with water and store it in the refrigerator for drinking, cooking, and preparing baby formula throughout the day.
  - If you do have a lead service line, flushing times can vary based on the length of your lead service line and the plumbing configuration in your home. The length of lead service lines varies considerably. Flushing for at least 3 – 5 minutes is recommended.
- *Use cold water for drinking, cooking, and preparing baby formula.* Do not cook with or drink water from the hot water tap, lead dissolves more easily into hot water. Do not use water from the hot water tap to make baby formula.
- *Look for alternative sources or treatment of water.* You may want to consider purchasing bottled water or a water filter that is certified to remove "total lead".
- *Clean and remove any debris from faucet aerators on a regular basis.*
- *Do not boil water to remove lead. Boiling water will not reduce lead.*
- *Purchase lead-free faucets and plumbing components.*
- *Remove the entire lead service line.*
- *Test your water for lead. Verify your service line.* Please call us at 847-810-4650 to find out how to get your water tested for lead.
- If test results indicate a lead level above 15 ug/L, bottled water should be used by pregnant women, breast-feeding women, young children, and formula-fed infants.
