Tree Debris Removal
Collection Guidelines

Clive
Distinct by Nature

- Tree debris must be cut down to an 18-inch diameter or less.
- Tree trunks and branches must be cut into 4-foot sections or shorter.
- Do not tie debris with rope, wire, etc., because this material cannot go through the wood chipper.
- Place tree limbs and logs in the same direction with the larger ends facing the curb – this makes it easier to load into the wood chipper.
- Separate tree branches and brush in one pile and larger logs in another pile.
- The resident is responsible for moving debris to the curb.
- Keep tree debris piles away from hydrants, mailboxes, and utility boxes.
- Small plant materials like leaves and twigs can placed in yard waste bags for regular collection day.
