EXECUTIVE SUMMARY

The City of Eastpointe currently owns and maintains 104.6 miles of roadway. Combating the aging road system and deteriorating road infrastructure is a top priority of the City. This Asset Management Plan (AMP) was developed to provide insight into the City's roadway inventory as well as to aid the City in estimating the annual budget required to achieve the desired Level of Service (LOS).

The Federal Highway Administration has developed Asset Management System Guidelines and recommends considering the following when preparing a road budget:

"Proposed expenditures by the road agency must be justified. The consequences of prolonged insufficient maintenance should be explained in terms of the deterioration of the road network, the eventual costs of deferred maintenance, and the higher costs sustained by road users. All major maintenance activities such as periodic resurfacing, strengthening, and rehabilitation should be supported by a quantified economic justification for each project or road link. Routine maintenance operations should be based on a set of standards and levels of service derived from cost-effectiveness analysis."

The current condition of the City's roadway network was determined using the Pavement Surface Evaluation and Rating (PASER) methodology developed by the University of Wisconsin and adopted by Michigan as the standard for evaluating the condition of local agency roads. The PASER system consists of a simple 1 to 10 rating scale to describe the condition of the pavement, whereby 10 represents a newly constructed roadway and 1 represents a failed or fully deteriorated roadway. Furthermore, PASER classifies roadways as good, fair, and poor, corresponding to the ratings 7-10, 4-6, and 1-3, respectively.

The City's roadway network was evaluated in 2017 and the resulting ratings were 16% good, 76% fair, and 8% poor, with an average PASER rating of 5.3. Based on this assessment, four (4) strategies were analyzed to determine what road improvements and preventative maintenance would provide the greatest benefit to the roadway network.

Option 1: "Do-Nothing" – If the City budgets no dollars per year for road improvements and preventative maintenance the road surface condition average PASER rating is projected to decline by 2 over the next ten years.

Option 2: Budget \$1,300,000 per year for the City's road improvements and preventative maintenance. Over the next ten years, the City's current average PASER rating is expected to be maintained.

- Option 3:** Budget \$2,500,000 per year for the City's road improvements and preventative maintenance. Over the next ten years, the City's current average PASER rating is expected to increase by 0.85.
- Option 4:** Budget \$4,000,000 per year for the City's road improvements and preventative maintenance. Over the next ten years, the City's current average PASER rating is expected to increase by 1.30.

This summary provides a brief overview of the evaluation, analysis, and road improvement and preventative maintenance strategies for the City of Eastpointe's roadway network. A more comprehensive discussion can be found herein.

1.0 INTRODUCTION

A City's infrastructure is comprised of several assets including sewer, water main, and roadways. As the system ages and deteriorates, incidental costs are likely to occur, these unforeseen costs include: operation costs, maintenance costs, and replacement costs. An approach to managing these aging assets is defined as asset management. The International Infrastructure Management Manual defines the goal of asset management:

“Meeting a required level of service in the most cost-effective way through the creation, acquisition, operation, maintenance, rehabilitation, and disposal of assets to provide for present and future customers.”

The intent of this Asset Management Plan (AMP) is to ensure long-term funding strategies in order to preserve the longevity of the City of Eastpointe's roadway network. This AMP has been developed following Michigan Department of Transportation (MDOT) and Transportation Asset Management Council (TAMC) requirements and best practices for road AMP's. The AMP is intended to be a working document which is reviewed and updated on an annual basis and consists of the following elements:

- An inventory of the City's current road system, including mileage of major and local roads, federal aid eligible roads and pavement surface type.
- An assessment of current pavement conditions of the City's major and local roads. (The assessment is based on the 2017 PASER Report of individual street segments and known road improvement projects)
- An assessment of the road treatments that are currently utilized and/or considered when programming road improvement projects within the City and an estimate of project costs and funding levels.
- A prediction of future pavement conditions and development of performance measures and targets.
- A trade-off analysis and identification of candidate projects.

2.0 ROAD FUNDING SOURCES

The designation of City Major and City Local is utilized by the State of Michigan to distribute Michigan Transportation Fund (MTF) dollars received from the state gas tax, vehicle registration fees, and other funds to the state, counties, cities and villages according to a formula based on street network mileage and population. This process is outlined in the State of Michigan's Act 51 of 1951, as amended. This law also describes the requirements that road authorities must adhere to for spending monies received from the MTF. The Major Street Fund and Local Street Fund in the City's annual budget represent the funds received from the MTF. Additional road projects (such as resurfacing or reconstruction) can be funded with these dollars as well. In eligible areas, Community Development Block Grant (CDBG) funds may also be utilized for road reconstruction and/or resurfacing projects.

City streets are also classified as federal aid eligible. The City of Eastpointe has 14.6 miles of roads that are eligible for federal aid. Road improvements on these segments may be completed with funds distributed from the federal government via the state to counties, cities and villages from the Federal Highway Trust Fund. Potential road improvement projects on eligible roads are submitted to the Macomb County Federal Aid Committee for competitive evaluation. Roads submitted for funding are evaluated based on surface condition, traffic counts and safety concerns. Those selected for federal funding participation must meet additional design and reporting requirements dictated by the Federal Highway Administration (FHWA) and MDOT. The current federal participation levels for these projects stipulate that up to 80% of eligible construction project costs may be paid with federal aid and the City must provide a 20% local match.

NOTE: TAMC AND THE STATE OF MICHIGAN CLASSIFY ROADS AS CITY MAJOR AND CITY LOCAL; ROADSOFT CLASSIFIES ROADS AS CITY MAJOR AND CITY MINOR. THE USE OF THE TERM CITY MINOR IN ALL CASES IS REPRESENTING THE TAMC CLASSIFICATION CITY LOCAL.

3.0 ASSESSMENT OF CURRENT CONDITIONS

3.1 *Background of City Streets*

The City of Eastpointe has 104.6 miles of roadway that the City is entirely responsible for maintaining. This includes routine maintenance activities such as pot-hole filling, plowing, sweeping, pavement markings, signs, etc., and preventative maintenance and improvement activities such as joint sealing, concrete repairs, resurfacing and reconstruction. The street network can be broken down and classified in several ways. For state funding purposes, the network consists of 22.9 miles of Major streets and 81.7 miles of Local streets. Of the 22.9 miles of Major streets, 14.6 miles of roadway are eligible for federal aid assistance. The streets are also classified by surface type, with nearly 86% of the city's roads being concrete, and approximately 14% classified as composite (asphalt surface over a concrete base).

Figure 1. Road Mileage by Act 51 and Federal Aid Designation

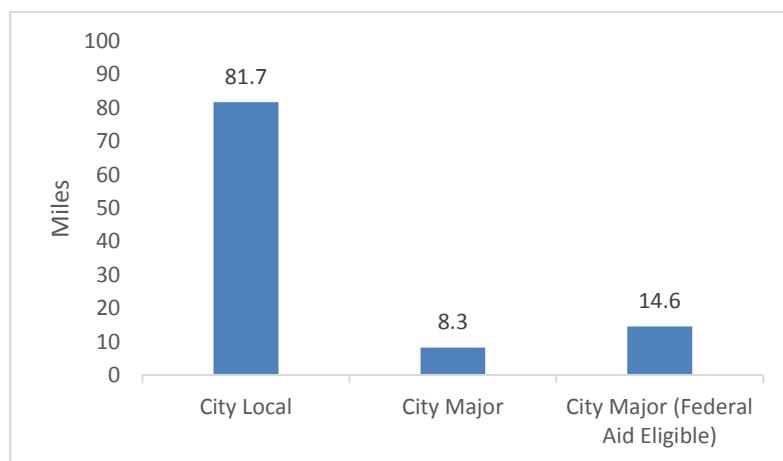

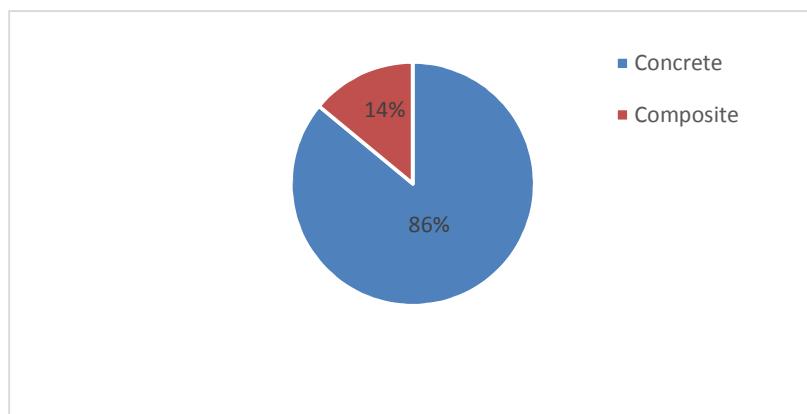

Figure 2. Road Surface Type Breakdown

3.2 Current Road Conditions

The current condition of the City's roads is determined using the Pavement Surface Evaluation and Rating (PASER) methodology developed by the University of Wisconsin and adopted by Michigan as the standard for evaluating the condition of local agency roads. The PASER system consists of a simple 1 to 10 rating scale to describe the condition of the pavement, whereby 10 represents a newly constructed roadway and 1 represents a failed or fully deteriorated roadway. Furthermore, PASER classifies roadways as good, fair, and poor, corresponding to the ratings 7-10, 4-6, and 1-3, respectively. The PASER system is relatively intuitive and the results can be easily understood by the general public, which makes it an effective tool for describing the condition of the road network.

The PASER ratings are collected and maintained in RoadSoft GIS, a Geographic Information System (GIS) based road asset management software package that is available to local agencies in Michigan at no cost.

Summary statistics for the road network PASER ratings are displayed in the following figures. Based on the latest surface ratings, the average PASER ratings are as follows;

- All streets - 5.3
- Major Streets - 6.2
- Local Streets – 5.1
- Federal Aid Eligible Streets – 6.6
- Non-Federal Aid Eligible Streets – 5.1

This generally indicates that the more important roads within the City, federal aid eligible roads, are in better condition than the non-federal aid eligible roads. Figures 3-5 summarize the PASER ratings for the road network broken down by federal aid designation, as well a roadway surface type.

Figure 3. PASER Rating for Entire Road Network

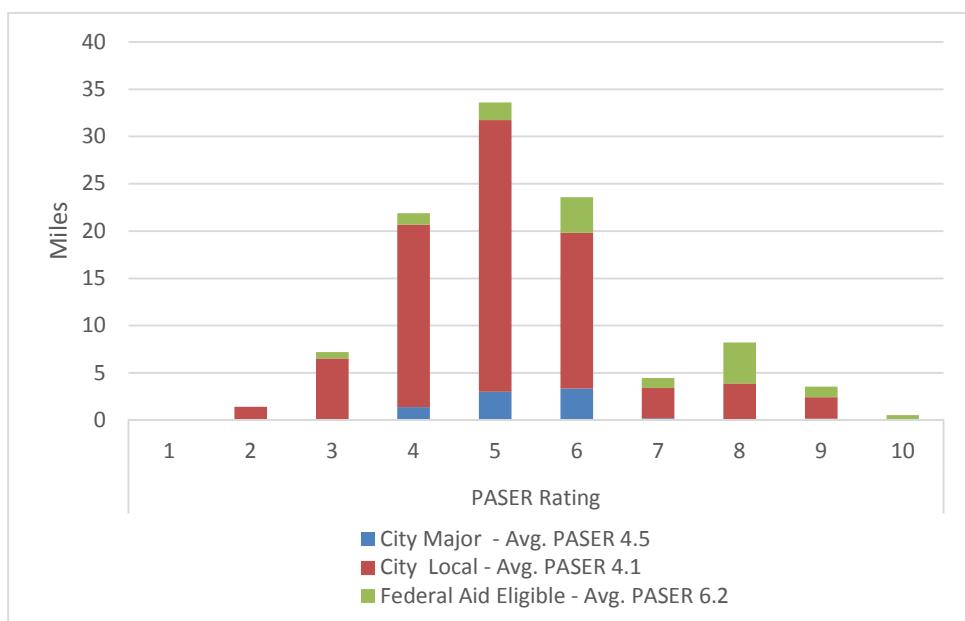

Figure 4. PASER Rating by Surface Type for Entire Road Network

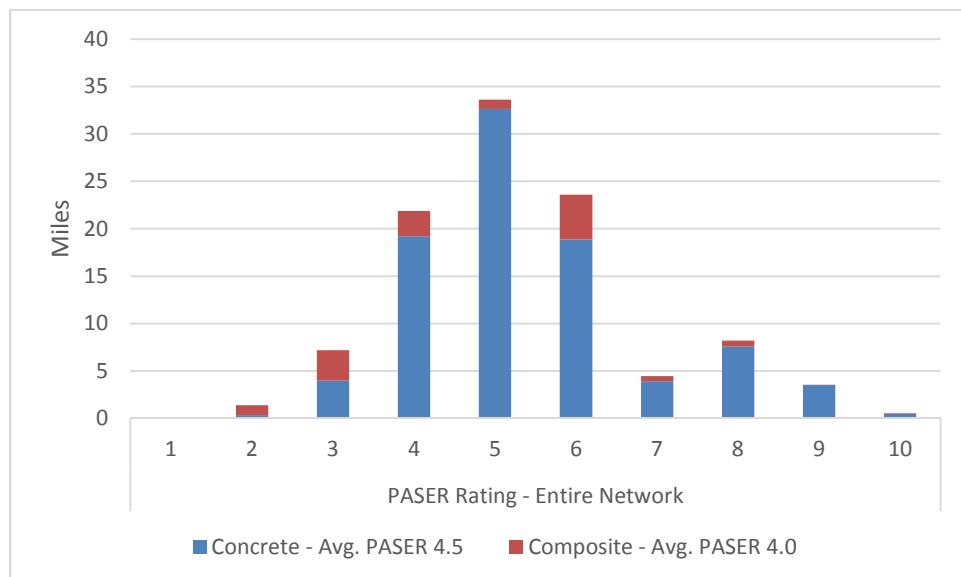

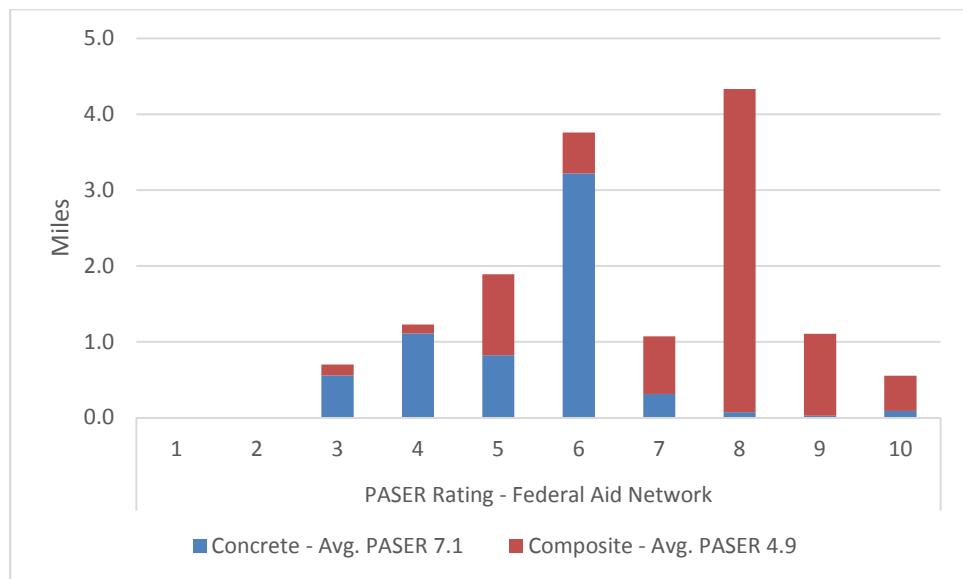

Figure 5. PASER Rating by Surface Type for Federal Aid Eligible Roads

A map depicting the 2017 PASER ratings for the City's road network can be found in Appendix A.

3.3 *Projected Road Conditions*

Roads have a finite life and will deteriorate over time, therefore it is important to evaluate the condition of the road network at the present time and also predict the condition of the road network in the future. RoadSoft GIS has the capability to project the 2017 PASER ratings to the current year, and into future years, based on standard road deterioration curve models that have been developed with statewide data. The concrete road deterioration curve is shown in Figure 6 and the composite road (follows the asphalt deterioration curve) is shown in Figure 7.

Figure 6. Standard Concrete Pavement Deterioration Curve

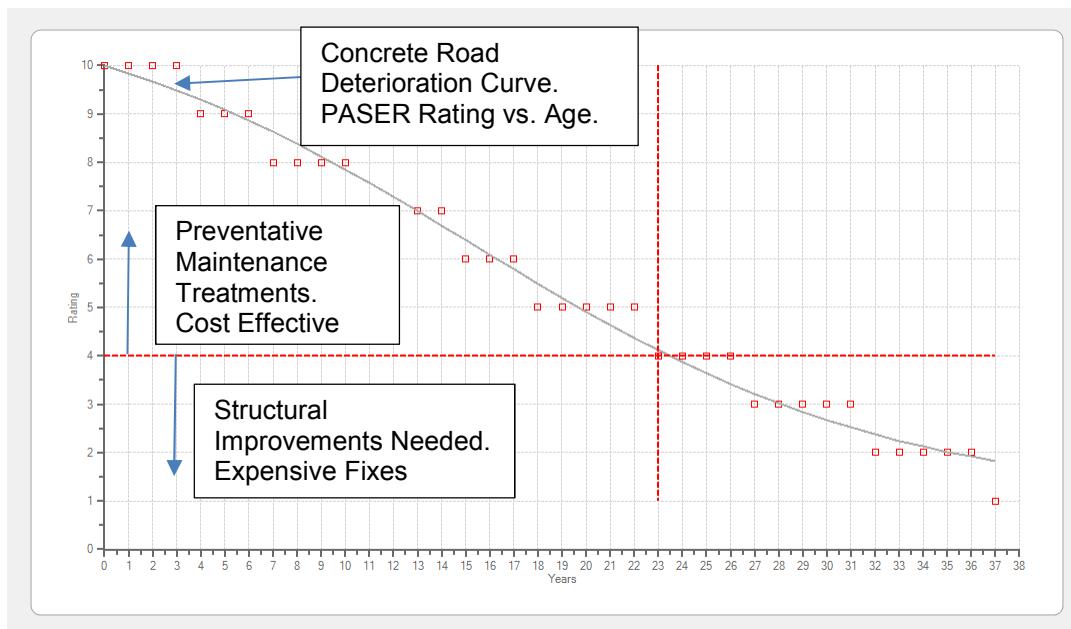

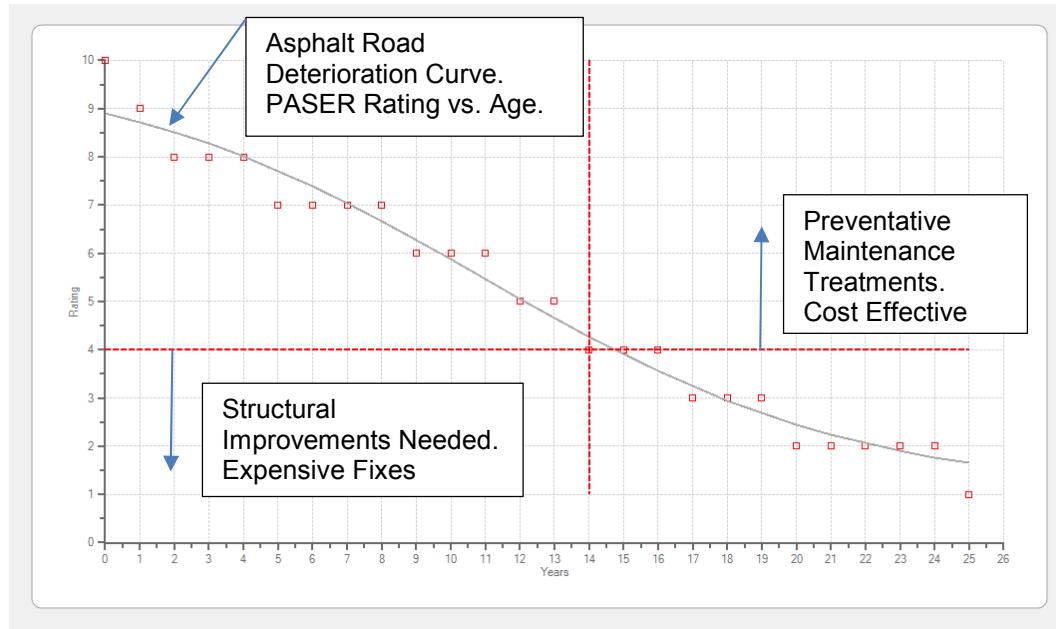

Figure 7. Standard Asphalt Pavement Deterioration Curve

While the RoadSoft GIS software has the ability to model the current conditions of the road network over time, predicting the condition of roads beyond one year does not always result in the most accurate data. The TAMC and MDOT require that all federal aid eligible roads be rated once every two years. Although 86% of the City's road network is not federal aid eligible, it is

strongly suggested that the City implement a similar rating schedule for all of its roads, either 50% of the system every year or rating the entire road network every other year. This will ensure accurate, up to date data to assist the City in annual road budgeting and evaluation of asset management strategy performance.

4.0 ROAD IMPROVEMENT PROGRAM

4.1 Available Treatments

There are many different treatment options for the various road surface types, and it is important to select the right fix at the right time. This provides an optimized approach to programming scarce road dollars, rather than fixing the worst roads first. **While it may seem counterintuitive to spend money on roads that appear to be in relatively good shape, it is much more cost effective to maintain good roads in a good condition than to let roads deteriorate to a point where a very expensive fix is the only option available.** Road improvement costs tend to increase progressively as conditions deteriorate.

A road's Remaining Service Life (RSL) is a metric that is used to determine the appropriate time to perform improvements on a road segment. Essentially, the RSL is the estimated number of years remaining until a structural rehabilitation is necessary. Roads with a positive RSL can generally be cost effectively maintained with preventative maintenance treatments such as joint sealing, concrete patching, and thin overlays. However, roads with a negative RSL generally require a more expensive fix, such as structural asphalt overlay or complete reconstruction.

A "mix of fixes" have been developed that are appropriate for the types of roads in the City, including the appropriate time to apply these fixes. These fixes are shown in the charts below. The Extended Service Life (ESL) shown in the table is simply the additional number of years of remaining service life that is added after a particular treatment has been applied.

Table 1 - Pavement Treatment Toolbox

<u>Composite</u>							
PASER	Min. RSL	Max RSL	Treatment	Type	PASER Reset	RSL Reset	Avg. ESL
10	14	14	None

<u>Concrete - Major</u>						
PASER	Treatment	Type	Cost/Syd	Cost/Ln Mi		
10	None					
9	None					
8	None					
7	Joint Seal	PM	\$ 2.00	\$ 21,120.00		
6	Joint Seal	PM	\$ 2.00	\$ 21,120.00		
5	Full Depth Slab Replacement - 10" Thick	RH	\$ 35.00	\$ 369,600.00		
4	Full Depth Slab Replacement - 10" Thick	RH	\$ 35.00	\$ 369,600.00		
3	Reconstruction with Concrete - 9" Thick	RC	\$ 145.00	\$ 1,531,200.00		
2	Reconstruction with Concrete - 9" Thick	RC	\$ 145.00	\$ 1,531,200.00		
1	Reconstruction with Concrete - 9" Thick	RC	\$ 145.00	\$ 1,531,200.00		

The costs shown are budgetary estimates for the various treatments, which include construction costs, engineering design services, construction phase engineering services and a factor for contingency. The costs reported above should be reviewed on a regular basis and adjusted based on additional project experience and future construction costs.

5.0 PREDICTION OF FUTURE PAVEMENT CONDITIONS

5.1 *Performance Measures and Targets*

For the purposes of this evaluation all streets within the City, including federal aid eligible streets, were considered in the analysis to highlight the need for additional funding. Securing funds for federal aid eligible roads has been inconsistent and therefore, it was assumed that the City will budget for improvements of these road segments.

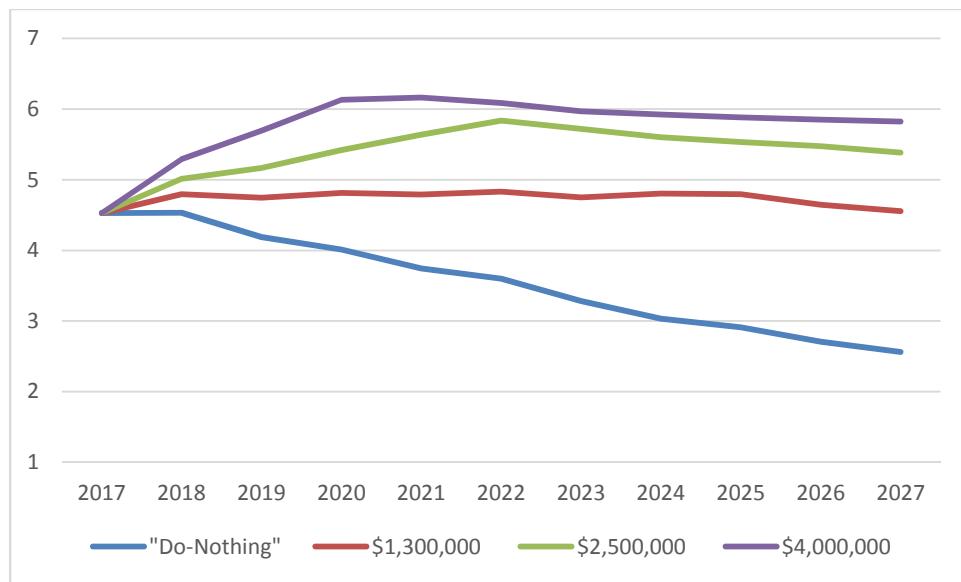

The figures presented below represent results of an optimized strategy for applying road treatments based on a given budget. Four budget options were utilized for this evaluation.

Option 1: “Do-Nothing” – If the City budgets no dollars per year for road improvements and preventative maintenance, the road surface condition average PASER rating is projected to decline by 2 over the next ten years.

Option 2: Budget \$1,300,000 per year for the City’s road improvements and preventative maintenance. Over the next ten years, the City’s current average PASER rating is expected to be maintained at a 5.3.

- Option 3:** Budget \$2,500,000 per year for the City's road improvements and preventative maintenance. Over the next ten years, the City's current average PASER rating is expected to increase by 0.85.
- Option 4:** Budget \$4,000,000 per year for the City's road improvements and preventative maintenance. Over the next ten years, the City's current average PASER rating is expected to increase by 1.30.

Figure 8. Average PASER Rating Comparison

6.0 ROAD PROGRAMMING DECISIONS

6.1 Trade-Off Analysis

Spending the available dollars in the most cost effective manner should be a common goal for the City of Eastpointe. While road reconstruction can have a large impact on the PASER rating and RSL for that particular segment, the high cost of road reconstruction often happens at the expense of cost effective preventative maintenance treatments. However, just performing preventative maintenance treatments on streets where those fixes are appropriate will not address the roads in the worst condition. Finding the right balance between reconstruction, rehabilitation, and preventative maintenance requires conducting a trade-off analysis and analyzing the results.

A trade-off analysis for the City's roads is shown in the figures below. An assumed annual rate of inflation of 1.5% was applied to projected costs and budgets for these analyses (i.e. recognizing

that road projects will get more expensive year over year, the City will increase its annual budget for road projects at the rate of inflation to negate the increase in project costs).

The figures below display the most cost effective approach for proportioning the budget for reconstruction (RC), rehabilitation (RH) and preventative maintenance (PM) projects.

Figure 9. Repair Methodology for \$1,300,000/yr Budget

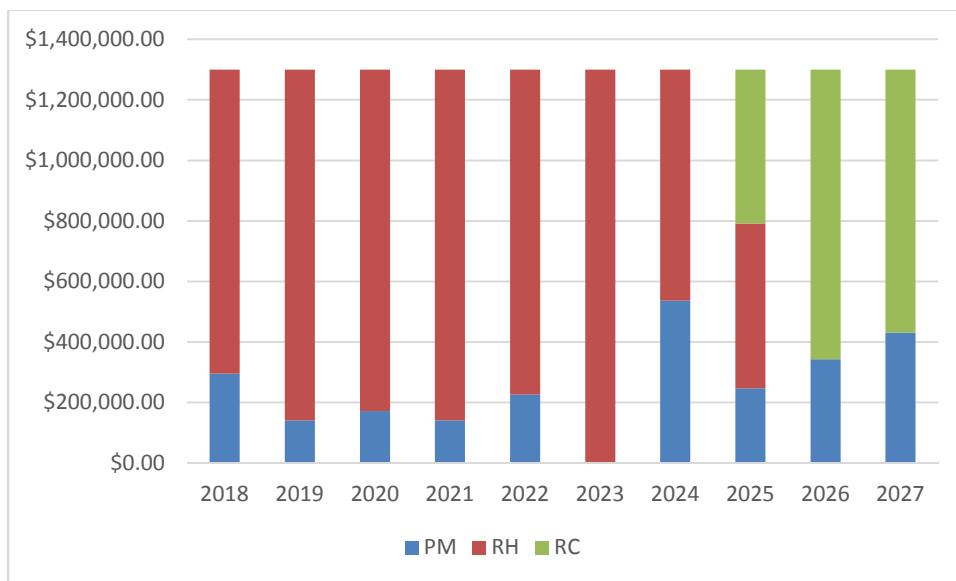

Figure 10. Repair Methodology for \$2,500,000/yr Budget

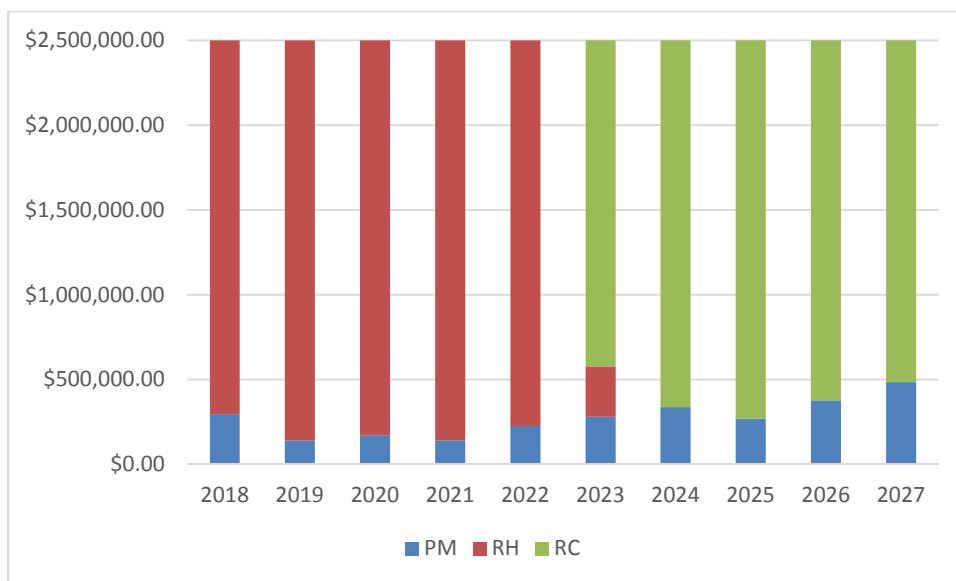

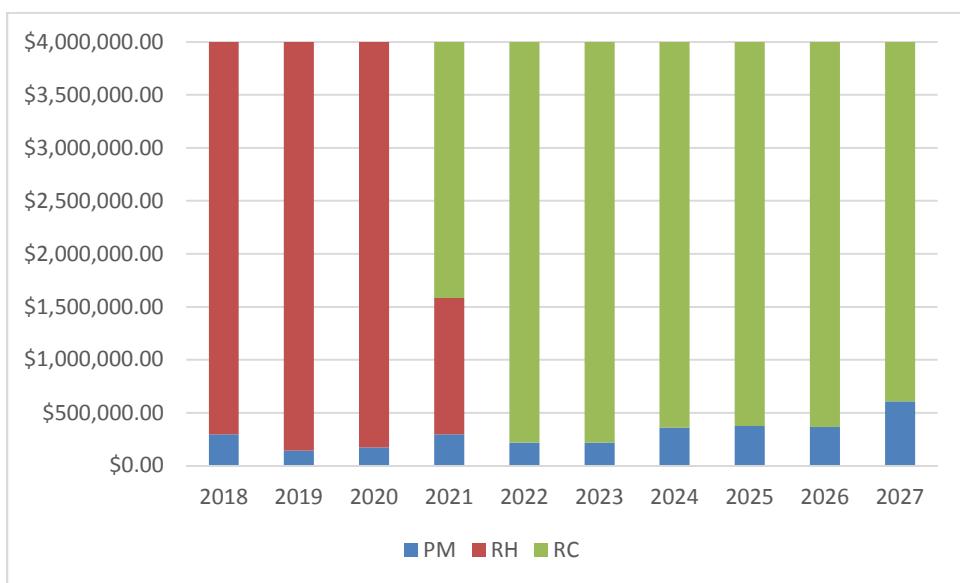

Figure 11. Repair Methodology for \$4,000,000/yr Budget

6.2 Identification of Candidate Projects

Potential future projects shall be screened from a network level analysis of PASER ratings and RSL. Candidate project segments which meet the criteria for particular treatments will be grouped with nearby segments where practical. These candidate projects will then be evaluated in greater detail with field visits and additional information gathering to verify the appropriateness of the selected treatments. Factors that should be considered when evaluating candidate projects include:

- Detailed engineering review of location
- Future water and sewer work
- Future anticipated projects
- Economies of scale
- Safety concerns
- Proximity to schools and other sensitive institutions

Projects which continue to be good candidates for the proposed treatment will be programmed for work in a future CIP as funds become available.

7.0 CONCLUSION

The City of Eastpointe has committed to managing their road assets in a cost effective manner with the limited funds that are available. To accomplish this goal, the City has developed a road AMP. The road AMP involves regular assessment of the current conditions of the road network, an evaluation of the treatments available and their costs, and a plan to meet the goals and priorities of the community. This plan will serve as a guiding document when making future decisions regarding the most cost effective way to program road funds. Although this plan should serve to provide guidance in the future, it also should be reviewed and updated on an annual basis to analyze progress made to date, evaluate the success of the program, and determine if an adjustment in road funding allocation or strategy is necessary to accomplish the road network goals and priorities of the City.
