

Metering, Billing, and Payment

Net metered energy shall be measured in accordance with standard metering practices by metering equipment capable of measuring (but not necessarily displaying) power flow in both directions.

In instances where a net metering customer has requested, and where the City would not have otherwise installed, metering equipment that is intended to be read off site, the City may charge the net metering customer its actual cost of installing any additional equipment necessary to implement net metering service.

A net metering customer shall receive no compensation for excess generation from the City. In any billing period in which there is a billing credit, the customer shall be required to pay only the non-usage sensitive charges for that billing period which includes the customer charge. Any billing period credits shall be accumulated, carried forward, and applied at the first opportunity to any billing periods having positive net consumption. However, any accumulated billing credits remaining unused at the end of a net metering period shall be carried forward only to the extent that such accumulated billing period credits do not exceed the net metering customer's billed consumption for the current net metering period, adjusted to exclude accumulated billing credits carried forward and applied from the previous net metering period.

A net metering customer owns any renewable energy certificates associated with the total output its renewable fuel generator.
