July 11, 2017 Regular Board Meeting 8:30 a.m.
July 18, 2017 Regular Board Meeting 8:30 a.m.

Briefing Notes for CD 11

Hwy 30 Roadbed Blowout – June, 8 2017

From the sinkhole going west the camera footage interfered with by a high voltage line going through the area.

The first 300 feet of the video is unavailable due to that high voltage interference, but we could see it on the pullback footage that starts at 10:11 a.m. at 811 ft. going back towards the hole.

The tile was located and flagged. It was found to run west straight down the road for several hundred feet before curving north into the field.

Going east from the sinkhole, it was found to run under the roadbed for 835ft.

Throughout the entire tile there are many cracks ranging from small to large and there are several seams that were disintegrating. It should also be noted that there were large patches of pitting inside the pipe.

The concrete pipe is in generally very poor shape throughout. Stones and rocks have washed through the pipe over the years and became trapped in areas of the pipe where it has heaved - which is causing the water to slow down in several areas. You can see in the video the camera crawling over many of these debris fields.

Some photos on the thumb drive have been noted for specific issues. The photos are labeled with a number indicating the timestamp to correspond with the time on video. GW on the photo file names means going west and GE means going east.
