US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Number of Days to Update: 84	Next Scheduled EDR Contact: 10/11/2021
	Data Release Frequency: Quarterly

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 12/17/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 03/24/2021

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
06059C0136J	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>

06059C0128J	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
ANAHEIM	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	0 - 1/8 Mile South
Site Name:	DICHEM/DRESSER & CALLA CHEMICAL
Site EPA ID Number:	CAD000632984
Groundwater Flow Direction:	GENERALLY W IN THE REGION.
Inferred Depth to Water:	approximately 20 feet to the shallow perched aquifer.
Hydraulic Connection:	Little is known about the perched aquifer in terms of interconnection with the lower Talbert aquifer. The Talbert is present at an approximate depth of 140 feet and is confined.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: METZ

Soil Surface Texture: loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	16 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 8.4 Min: 6.6
2	16 inches	62 inches	stratified sand to fine sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 8.4 Min: 6.6

Soil Map ID: 2

Soil Component Name: HUENEME

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class:

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	27 inches	fine sandy loam	Not reported	Not reported	Max: 42 Min: 14	Max: 8.4 Min: 7.4
2	27 inches	59 inches	stratified sand to silt loam	Not reported	Not reported	Max: 42 Min: 14	Max: 8.4 Min: 7.4

Soil Map ID: 3

Soil Component Name: SAN EMIGDIO

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	7 inches	fine sandy loam	Not reported	Not reported	Max: 42 Min: 14	Max: 8.4 Min: 7.9
2	7 inches	61 inches	stratified gravelly loamy coarse sand to very fine sandy loam	Not reported	Not reported	Max: 42 Min: 14	Max: 8.4 Min: 7.9

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Re: Native American Tribal Consultation, Pursuant to the Assembly Bill 52 (AB 52), Amendments to the California Environmental Quality Act (CEQA) (Chapter 532, Statutes of 2014), Public Resources Code Sections 5097.94 (m), 21073, 21074, 21080.3.1, 21080.3.2, 21082.3, 21083.09, 21084.2 and 21084.3, 3KTG010400 Project, Orange County

Dear Mr. Cisneros:

Pursuant to Public Resources Code section 21080.3.1 (c), attached is a consultation list of tribes that are traditionally and culturally affiliated with the geographic area of the above-listed project. Please note that the intent of the AB 52 amendments to CEQA is to avoid and/or mitigate impacts to tribal cultural resources, (Pub. Resources Code §21084.3 (a)) ("Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource.")

Public Resources Code sections 21080.3.1 and 21084.3(c) require CEQA lead agencies to consult with California Native American tribes that have requested notice from such agencies of proposed projects in the geographic area that are traditionally and culturally affiliated with the tribes on projects for which a Notice of Preparation or Notice of Negative Declaration or Mitigated Negative Declaration has been filed on or after July 1, 2015. Specifically, Public Resources Code section 21080.3.1 (d) provides:

Within 14 days of determining that an application for a project is complete or a decision by a public agency to undertake a project, the lead agency shall provide formal notification to the designated contact of, or a tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, which shall be accomplished by means of at least one written notification that includes a brief description of the proposed project and its location, the lead agency contact information, and a notification that the California Native American tribe has 30 days to request consultation pursuant to this section.

The AB 52 amendments to CEQA law does not preclude initiating consultation with the tribes that are culturally and traditionally affiliated within your jurisdiction prior to receiving requests for notification of projects in the tribe's areas of traditional and cultural affiliation. The Native American Heritage Commission (NAHC) recommends, but does not require, early consultation as a best practice to ensure that lead agencies receive sufficient information about cultural resources in a project area to avoid damaging effects to tribal cultural resources.

The NAHC also recommends, but does not require that agencies should also include with their notification letters, information regarding any cultural resources assessment that has been completed on the area of potential effect (APE), such as:

1. The results of any record search that may have been conducted at an Information Center of the California Historical Resources Information System (CHRIS), including, but not limited to:

- A listing of any and all known cultural resources that have already been recorded on or adjacent to the APE, such as known archaeological sites;
- Copies of any and all cultural resource records and study reports that may have been provided by the Information Center as part of the records search response;
- Whether the records search indicates a low, moderate, or high probability that unrecorded cultural resources are located in the APE; and
- If a survey is recommended by the Information Center to determine whether previously unrecorded cultural resources are present.

2. The results of any archaeological inventory survey that was conducted, including:

- Any report that may contain site forms, site significance, and suggested mitigation measures.

All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum, and not be made available for public disclosure in accordance with Government Code section 6254.10.

3. The result of any Sacred Lands File (SLF) check conducted through the Native American Heritage Commission was negative.

4. Any ethnographic studies conducted for any area including all or part of the APE; and

5. Any geotechnical reports regarding all or part of the APE.

Lead agencies should be aware that records maintained by the NAHC and CHRIS are not exhaustive and a negative response to these searches does not preclude the existence of a tribal cultural resource. A tribe may be the only source of information regarding the existence of a tribal cultural resource.

This information will aid tribes in determining whether to request formal consultation. In the event that they do, having the information beforehand will help to facilitate the consultation process.

If you receive notification of change of addresses and phone numbers from tribes, please notify the NAHC. With your assistance, we can assure that our consultation list remains current.

If you have any questions, please contact me at my email address: Andrew.Green@nahc.ca.gov.

Sincerely,

Andrew Green
Cultural Resources Analyst

PSOMAS

Attn: Charles Cisneros

re: Paleontological resources for the 3KTG010400 Project

Dear Charles:

I have conducted a thorough search of our paleontology collection records for the locality and specimen data for proposed development at the 3KTG010400 project area as outlined on the portion of the Anaheim USGS topographic quadrangle map that you sent to me via e-mail on October 21, 2021. We do not have any fossil localities that lie directly within the proposed project area, but we do have fossil localities nearby from the same sedimentary deposits that occur in the proposed project area, either at the surface or at depth.

The following table shows the closest known localities in the collection of the Natural History Museum of Los Angeles County.

Locality Number	Location	Formation	Taxa	Depth
LACM IP 4933	Near the intersection of Navajo Rd & Meinhardt Rd	Niguel Formation	Invertebrates (unspecified)	Unknown
LACM VP 1652	Rio Vista Avenue south of Lincoln Avenue	Alluvium (Pleistocene)	Sheep (<i>Ovis</i>) Bison (<i>Bison</i>), camel (<i>Camelops</i>), horse (<i>Equus</i>), mammoth (<i>Mammuthus</i>), mastodon (<i>Mamut</i>), elephant clade (Proboscidea), dire wolf (<i>Canis dirus</i>), Coyote (<i>C. latrans</i>), deer (<i>Odocoileus</i>), dwarf pronghorn (<i>Capromeryx</i>), unidentified artiodactyl; sea duck (<i>Chendytes</i>)	Unknown (excavations for housing project)
LACM VP 4185-4201	Coyote Creek, adjacent to Ralph B Clark Regional Park in West Coyote Hills	La Habra Formation (Pleistocene; sandy silt shot through with caliche)		Surface, in creek bed
LACM VP	Sunset Beach at	Unknown Formation	Camel (<i>Camelops hesternus</i>)	Surface

3291	low tide, 50 yards north of Anderson Street & west of Pacific Coast Highway	(Pleistocene)		
LACM VP 3260	Long Beach (more specific locality not available)	Unknown formation (Pleistocene)	Bison (<i>Bison</i>) Invertebrates (snails; clams; tusk shells; barnacles; crabs; sea urchins); requiem shark (<i>Carcharhinus</i>), Spotted cusk eel (<i>Chilara</i>), croakers (<i>Genyonemus</i> , <i>Seriphus</i>), school shark (<i>Galeorhinus</i>), righteye flounder (<i>Glyptocephalus</i>), guitarfish (<i>Rhinobatos</i>), toadfish (<i>Porichthys</i>), perch (<i>Cymatogaster</i> , <i>Damalichthys</i>), bullhead shark (<i>Heterodontus</i>), ray (<i>Dasyatis</i> , <i>Myliobatus</i> , <i>Raja</i>), surfperch (<i>Embiotoca</i> , <i>Hyperprosopon</i> , <i>Micrometrus</i>), flatfish (<i>Citharichthys</i>), leopard shark (<i>Triakis</i>), slender sole (<i>Lyopsetta</i>), dogfish shark (<i>Squalus</i>), skate (<i>Squatina</i>), barracuda (<i>Sphyraena</i>)	Unknown
LACM VP 7739	Bluff Park (on the beach adjacent to the eastern half of the southern edge of the parking lot); Long Beach	Late Pleistocene* coastal deposits (dark gray massive sandy silt)		56 ft bgs

VP, Vertebrate Paleontology; IP, Invertebrate Paleontology; bgs, below ground surface

**Locality is 25 feet below carbon-14 accelerator mass spectrometry date of 43180 +/-710 years*

This records search covers only the records of the Natural History Museum of Los Angeles County ("NHMLA"). It is not intended as a paleontological assessment of the project area for the purposes of CEQA or NEPA. Potentially fossil-bearing units are present in the project area, either at the surface or in the subsurface. As such, NHMLA recommends that a full paleontological assessment of the project area be conducted by a paleontologist meeting Bureau of Land Management or Society of Vertebrate Paleontology standards.

Sincerely,

Alyssa Bell, Ph.D.
Natural History Museum of Los Angeles County

1.0 Introduction

The following study represents the Hydrology and Water Quality Technical Report prepared in support of the Town Center Specific Plan, Initial Study and Mitigated Negative Declaration. This study is based on the Hydrology and Water Quality Report prepared by RBF Consulting for the City of Stanton Town Center Specific Plan in October 2009 and is revised to reflect the current specific plan and storm water permit requirements. This report is a technical engineering study/evaluation intended to support the Town Center Specific Plan for the project on issues related to drainage, surface hydrology, and water quality.

The Town Center Specific Plan project site encompasses a 156.9-acre area in the northern portion of the City of Stanton. The City of Stanton is generally situated south of the cities of Anaheim and Buena Park, west of Garden Grove, and north of Westminster. The Specific Plan area is generally bounded by Cerritos Avenue to the north, Dale Avenue to the east, Katella Avenue to the south, and Rose Street to the west. Existing land uses surrounding the Specific Plan area include a mix of small commercial centers along Beach Boulevard; single-family and multi-family residential uses to the north; a Southern California Edison (SCE) substation and industrial uses to the east; industrial and commercial uses, including ORCO Block and Hardscape and a shopping center anchored by Food 4 Less, to the south; single- and multi-family residential uses to the west; and Stanton City Hall, Stanton Library, and an Orange County Sheriff Substation to the southwest. (See **Figures 1 and 2** for the Regional Location and Local Vicinity Map, and the Project Aerial Map, respectively).

The project consists of the revitalization of the City of Stanton, which is located within Orange County and under the jurisdiction of the Santa Ana Regional Water Quality Control Board (RWQCB). The proposed project involves mixed-use, commercial retail, industrial, open space parks and residential expansion and development. Both the commercial retail and industrial areas will have a mixed-use land use.

All assessments and technical analyses in this report are in compliance with the local drainage policies and requirements for the City of Stanton, Santa Ana RWQCB, and Orange County. The hydrology analysis and drainage assessments have been prepared at a specific plan level based upon available information.

1.1 Background and History

The City of Stanton initiated a comprehensive planning process for the Town Center to develop a cohesive, long-range plan for logical growth and provide the community with certainty of what may be developed. The Town Center Specific Plan provides policy, regulatory, and design guidance for both public and private land. The City of Stanton is in a key location for future regional transit opportunities including bus, rail, and light-rail. The Pacific Electric Corridor and the Union Pacific Line intersect at Beach Boulevard and Pacific Street, creating a unique opportunity for a transit center.

TOWN CENTER SPECIFIC PLAN

1.2 Development Planning for Storm Water Management

1.2.1 Flood Control Criteria

According to the County of Orange Local Drainage Manual, all habitable structures must be designed to provide 1.0 foot of freeboard during 100-year storm events. Roadways must be designed to allow one travel lane (approximately 12 feet) during the 10-year storm event and in sump conditions, one travel lane during the 25-year storm event.

The 10-year frequency shall be used in storm drain design when tributary areas are less than 640 acres. The water surface elevation must be kept below the top of curb, using a combination of street and storm drain flow. In sump conditions, catch basins and the connecting storm drains should be designed to a 25-year frequency. Regional and sub-regional facilities should be designed to the 100-year frequency with a minimum freeboard of 0.5 feet in subcritical flow and 1.0 feet in supercritical flow.

1.2.2 Storm Water Quality

The Clean Water Act (CWA) is the primary Federal law that protects the nation's surface waters and requires that an appropriate permit must be obtained to discharge into the Waters of the United States (US). Section 402 of the CWA establishes the National Pollutant Discharge Elimination System (NPDES), a permitting system for the discharge of any pollutant (except for dredge or fill materials) into the Waters of the US. The CWA requires that municipal NPDES Permits include:

1. A requirement to effectively prohibit non-storm water discharges into municipal storm sewers; and
2. Controls to reduce the discharge of pollutants from municipal storm drains to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants.

On January 18, 2002, the Santa Ana RWQCB issued a municipal storm water NPDES permit to the County of Orange and the 25 incorporated cities within the Santa Ana region, including the City of Stanton. This permit falls under a Phase I municipal separate storm water systems (MS4) permit which requires the discharger to develop and implement a WQMP with the goal of reducing the discharge of pollutants to the maximum extent possible (MEP). MEP is the performance standard specified in Section 402(p) of the Clean Water Act.

On July 22, 2006, the County of Orange, Orange County Flood Control District (OCFCD) and the incorporated cities (hereinafter collectively referred to as permittees or dischargers), submitted NPDES Application No. CAS618030 and a Report of Waste Discharge for reissuance of their areawide urban storm water

permit. The updated permit was issued as ORDER NO. R8-2009-0030, NPDES No. CAS618030 as amended by Order No. R8-2010-0062.

The Orange County Drainage Area Management Plan (DAMP) was created to "present a plan that satisfies NPDES permit requirements and to evaluate the impacts of urban stormwater discharges on receiving waters." The current DAMP (2003) was "redesigned [from the original 1993 DAMP] to serve as the foundation for a series of model programs, local implementation plans, and watershed implementation plans" and was "developed through a process that involved public and private sector input and public review through the California Environmental Quality Act (CEQA) process." Per Chapter 6.20 (Stormwater Discharge and Water Quality Ordinance) of the City of Stanton Municipal code, all new developments and significant redevelopments shall be in compliance with the Orange County DAMP and any conditions and requirements established by the Planning Department.

The Town Center Specific Plan must adhere to the DAMP New Development/Significant Redevelopment Program which fulfills the requirements of Section IIX of the Santa Ana Regional Water Quality Board Municipal NPDES Stormwater permit, R8-2009-0030, NPDES No. CAS618030 as amended by Order No. R8-2010-0062.

2.0 Existing Conditions

The purpose of this existing conditions evaluation is to establish a baseline for comparison of the pre- and the post-project conditions. Baseline conditions investigated include the following: land use, hydrology, floodplain mapping, and surface water quality.

2.1 Existing Land Use

The project site drains generally to the southwest. The project area consists of a mixture of residential, commercial, industrial and barren land uses. Refer to **Figure 3** for the Existing Land Use Map.

Note for the hydrology analysis, watershed land uses were simplified to consist of barren, residential (5-7 or 8-10 dwellings per acres), and commercial. The actual land uses varied slightly from those shown in the hydrology analysis due to a site visit and the percent impervious found in the existing conditions. Regions of the existing site were found to have a higher percent impervious than the hydrology manual specifies per the existing land use.

2.2 Hydrology

A hydrologic analysis for the existing condition was prepared for the Town Center Specific Plan. Hydrologic calculations to evaluate surface runoff associated with 10-year, 25-year and 100-year storm frequencies from the tributary drainage areas were performed using the Rational Method. Hydrologic parameters used in the analysis, such as rainfall, impervious values, time of concentration and soil classification, are presented in the Orange County Hydrology Manual and Addendum No. 1, dated 1986 and 1996, respectively.

2.2.1 Rational Method

The Advanced Engineering Software (AES) computer program RATSCx was used for the Rational Method calculations. According to the Orange County Hydrology Manual, the Rational Method was originally developed to estimate runoff from small (less than one square mile / 640 acres) urban and developed areas. The Rational Method equation relates rainfall intensity, a runoff coefficient, and drainage area size to the direct peak runoff. The design discharges were computed by generating a hydrologic "link-node" model, which divides the area into drainage subareas. These subareas are tributary to concentration points or hydrologic "node" points determined by the existing terrain and street layout. The following assumptions/guidelines were applied for use of the Rational Method:

1. The Rational Method hydrology includes the effects of infiltration caused by soil surface characteristics. The soils map from Orange County

Hydrology Manual indicates that the study area consists of soil types A and B. Refer to **Figure 4** for the Hydrologic Soils Group Map.

2. The infiltration rate is also affected by the type of vegetation or ground cover and percentage of impervious surfaces. **Table 2.1** contains a summary of the impervious values used for the analysis.

Table 2.1 - Percent Impervious Values	
Land Use	% Impervious
Commercial, Downtown Business, or Industrial	90
Natural or Agriculture	0
Public Park	15
School	40
Residential: 2.5 acre lots	10
Residential: 1 acre lots	20
Residential: 2 dwellings/acre	30
Residential: 3-4 dwellings/acre	40
Residential: 5-7 dwellings/acre	50
Residential: 8-10 dwellings/acre	60
Residential: More than 10 dwellings/acre	80
Condominiums	65
Apartments	80
Mobile Home Park	75

3. The time of concentration (T_c) is defined as the interval of time required for the runoff from the most hydraulically remote portion of the drainage area to reach the point of concentration. The time of concentration is a function of many variables including the length of the flow path from the most remote point of an area to the concentration point, the slope and other characteristics of natural and improved channels in the area, the infiltration characteristics of the soil and the extent and type of development.
4. Standard rainfall intensity data was based on the 10-year, 25-year and 100-year return periods, which can be found in Table B.1. of the Orange County Hydrology Manual.
5. Drainage patterns were determined using information obtained from existing storm drain plans, site visits, Google Maps and Google Earth, the City of Stanton GIS website, and Orange County Flood Control District base maps. Note that discrepancies were found between the City of Stanton's GIS files and as-built conditions in the field. Existing facilities were verified during a site visit on April 22, 2009 and discussed with City

employees on April 29, 2009. Refer to **Figure 5** -Storm Drain Base Map for existing storm drain facilities.

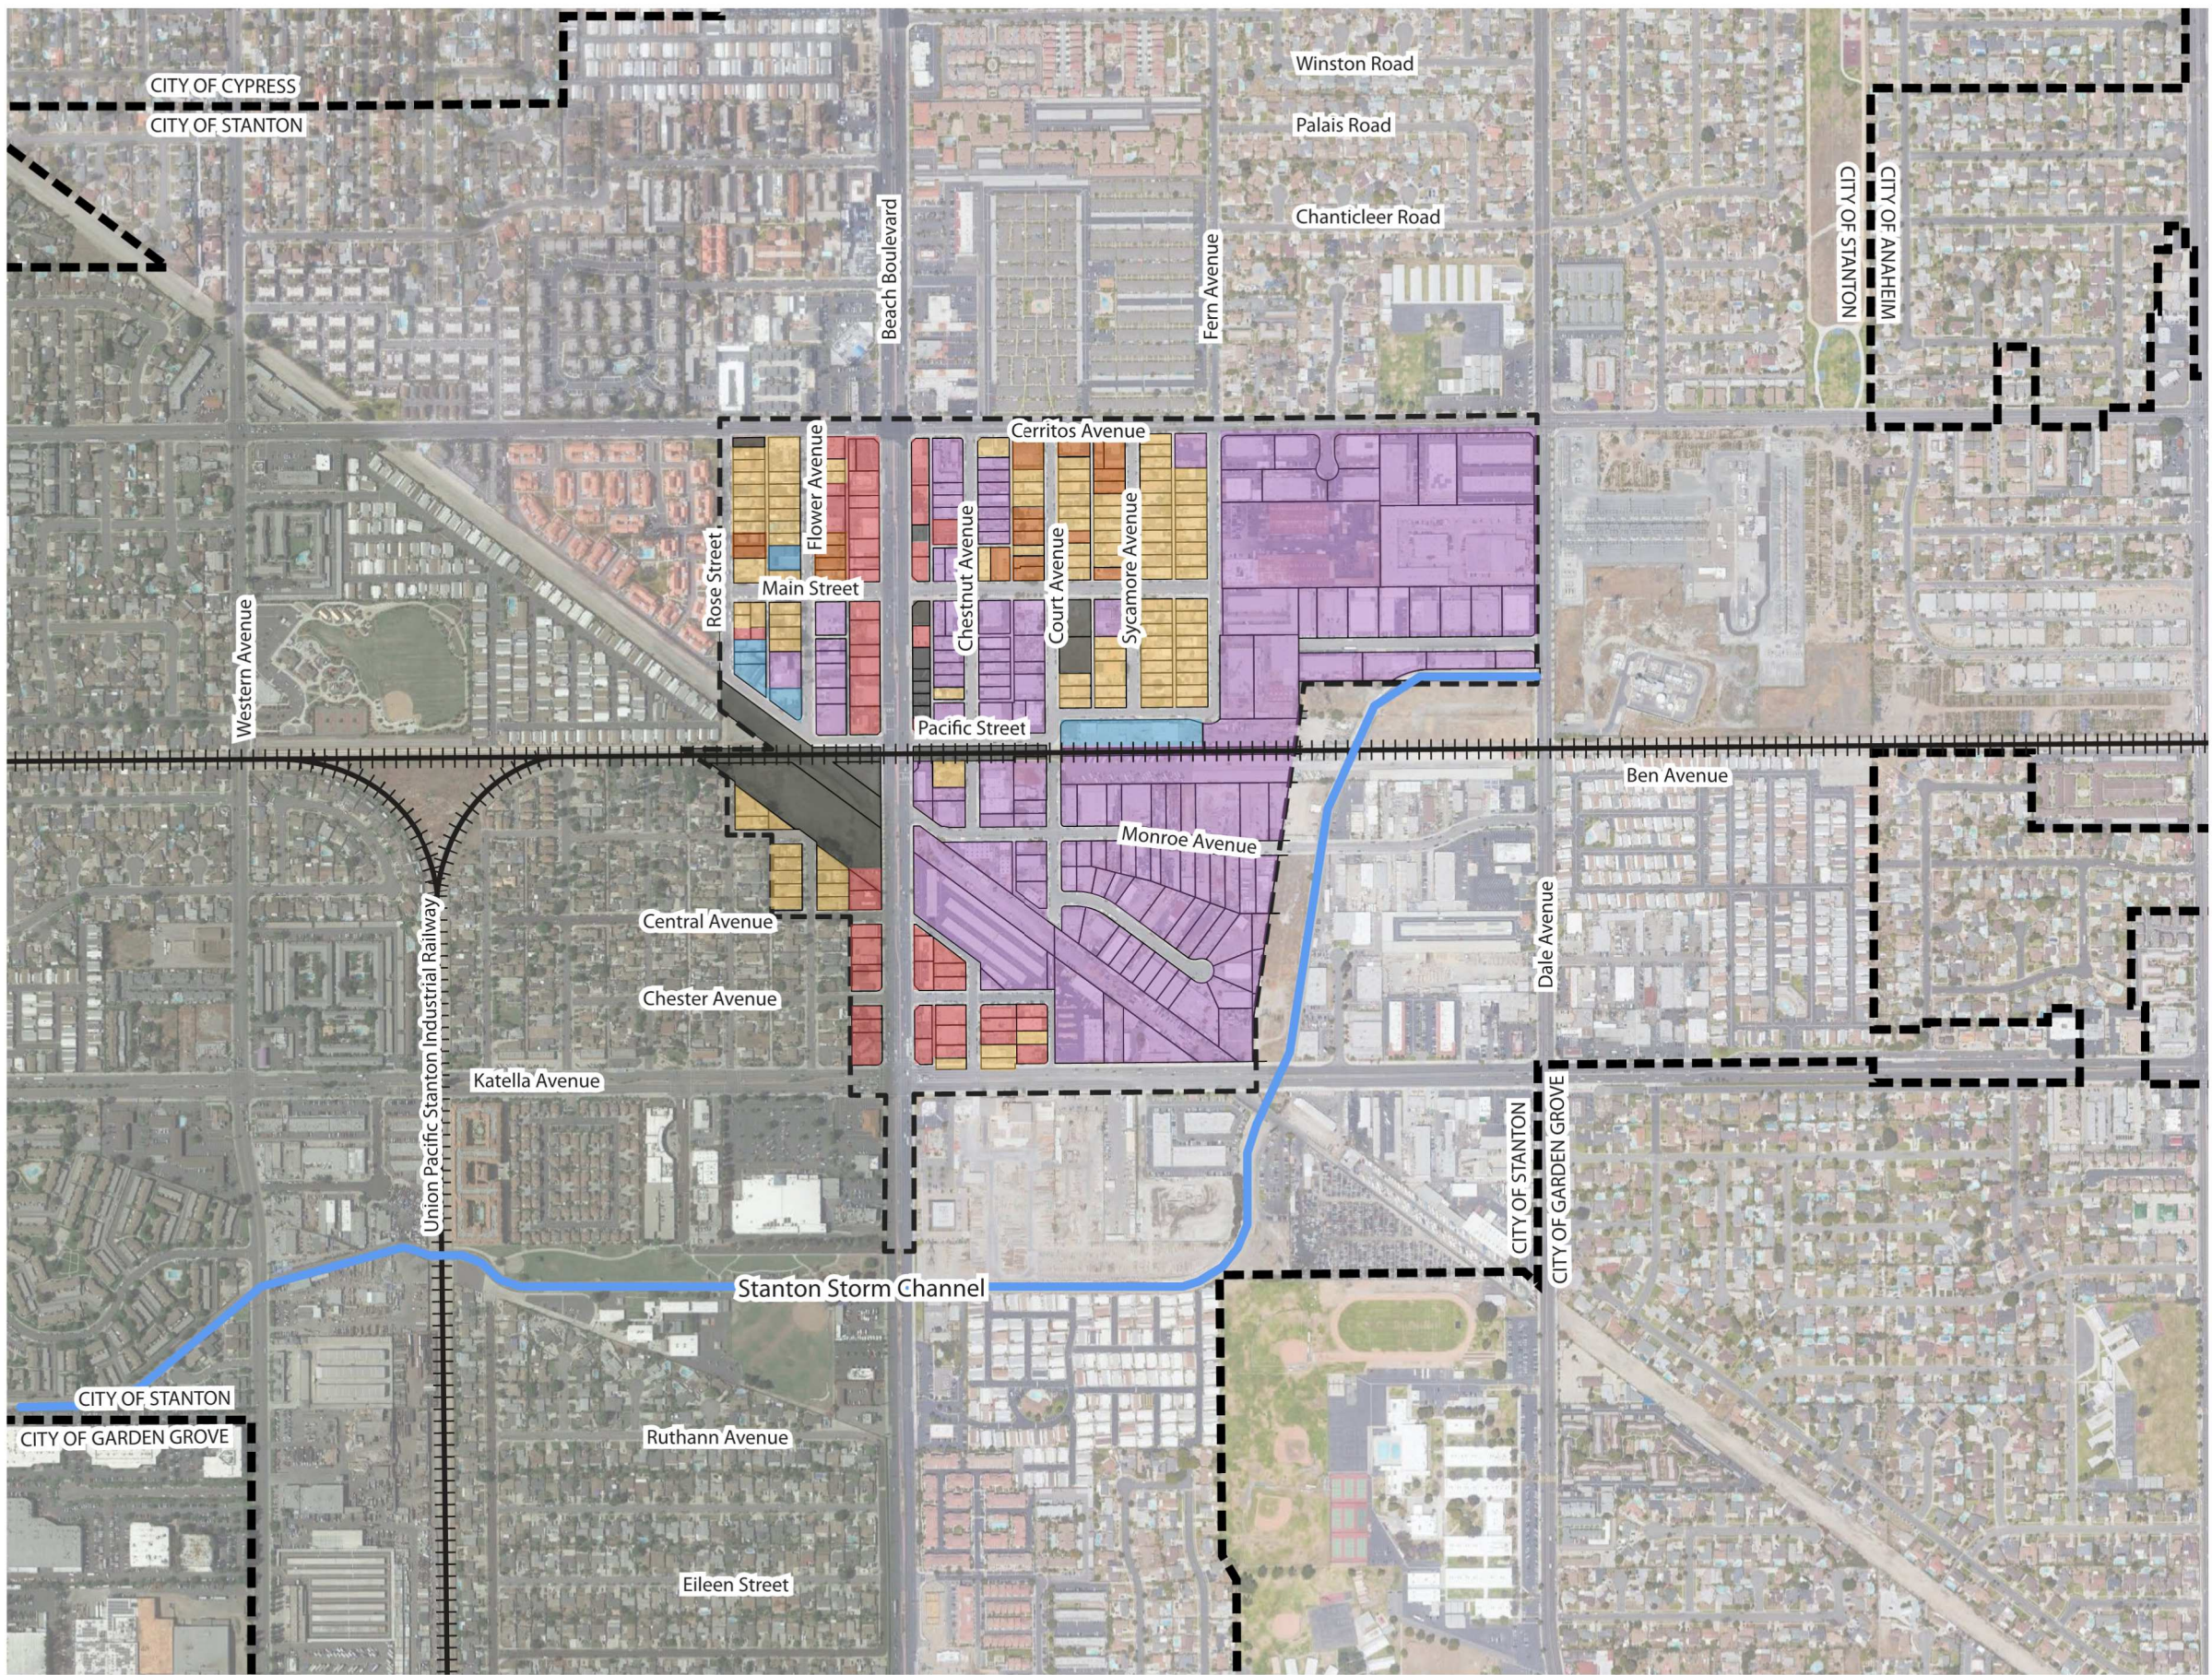

2.2.2 Existing Watershed Description

The existing watershed analyzed was assumed to be the area within the site boundary, more or less. All other areas tributary to the existing storm drain facilities were not analyzed. The existing watershed was divided into eight different sub-watersheds (A through H), with A being the most Northerly and continuing the naming convention in a counter-clockwise direction. Note sub-watersheds B and C exit the site at the same location and are considered to be one watershed. Sub-watersheds A, F and G were expanded and sub-watershed H was added to this study based on the updated specific plan project site. It should be noted that some areas along the periphery streets of the Specific Plan area were not included in the drainage analysis because the drainage flowed away from the Specific Plan area and was generally comingled with off-site drainage, outside of the Project boundary.

Sub-watersheds A, F, and G are picked up by existing storm drain facilities. Pipe and channel slopes were determined from as-builts. If as-builts were not available a constant slope was assumed equal to the site slope, as described below. Watersheds B, C, D, and E exited the specific plan site boundary through street flow and will enter an existing storm drain facility within Katella Avenue, downstream of the site. Sub-watershed H drainage consists of curb and gutter street flow easterly and southerly along Cerritos Avenue and Dale Avenue, respectively, and is pickup up by a catch basin and short lateral discharging directly into the Stanton Channel wing-wall outlet structure. All storm drain facilities are tributary to the Orange County Facility No. C02S01: Stanton Storm Channel.

The maximum elevation differential of the watershed is approximately 5 feet North to South (from elevation 68 at Cerritos Avenue to elevation 63 at Katella Avenue). The entire site was estimated to have a slope of 0.002 ft/ft. **Table 2.2** provides the existing condition subarea characteristics. The subareas listed correspond with **Figure 6**: Existing Condition Hydrology Map.

The watershed subarea boundaries were delineated utilizing aerial photographs, field visits and storm drain plans. A Master Plan of Drainage for the City of Stanton was completed May of 1971 that included proposed facilities within the project site. After field visits and discussions with the City, it was concluded that the City has deviated from the existing Master Plan and there are no future plans to change the existing facilities to those specified in the Master Plan. The existing Master Plan of Drainage was assumed to be out of date and the proposed facilities were disregarded for this analysis.

2.2.3 Existing Condition Surface Water Hydrology

To establish the baseline hydrologic conditions for the project area the 10-year, 25-year and 100- year frequency storms were analyzed. The 100-year analysis is used as the County's current method to determine the peak runoff in the regional storm drain system (e.g. Stanton Storm Channel). However, the 25-year analysis was used as the County's previous method to determine the peak runoff in the regional storm drain system (e.g. Stanton Storm Channel). The 10-year analysis and 25-year analysis (in sump areas) is used to size the local storm drain facilities. Appendix A contains the results of the rational method analysis. Results of the existing condition hydrologic analysis are summarized in Table 2.3, below.

Table 2.3 - Existing Conditions Peak Flowrates				
Subarea	Total Area	10-yr Peak Q (cfs)	25-yr Peak Q (cfs)	100-yr Peak Q (cfs)
A	71.8	75.7	93.7	123.0
B&C	9.3	13.3	16.7	22.3
D	1.5	2.9	3.6	5.0
E	1.4	2.4	3.3	4.8
F	32.0	52.0	64.3	84.8
G	13.7	30.0	36.1	46.6
H	21.0	28.9	35.3	45.4

2.2.4 Existing Condition Flooding

Based on discussions with the City, flooding occurs on Court Street, north and south of the Pacific Electric Railway easement. Both inlets for the existing 36" reinforced concrete pipe become inundated and runoff enters the adjacent industrial facilities.

2.3 Floodplain Mapping

The published Flood Insurance Rate Maps (FIRMs) for the project site are included on Community Panel No. 06059C0136H. The site is located in Zone X, which is within the 500-year floodplain and the 100-year floodplain with average depths of less than 1 foot or drainage areas less than 1 square mile. Based on this classification there is not a flood hazard present in the project area.

2.4 Storm Water Quality

As indicated in Section 1.2.2, storm water quality is a significant concern in Southern California. This section discusses typical pollutants found in storm water runoff and discusses the types of contaminants that may be found in existing storm water runoff.

2.4.1 Nonpoint Source Pollutants

A net effect of urbanization can be to increase pollutant export. However, an important consideration in evaluating storm water quality from the project is to assess if it impairs the beneficial use to the receiving waters. Nonpoint source pollutants have been characterized by the following major categories in order to assist in determining the pertinent data and its use. Receiving waters can assimilate a limited quantity of various constituent elements, however there are thresholds beyond which the measured amount becomes a pollutant and results in an undesirable impact. Background of these standard water quality categories provides an understanding of typical urbanization impacts.

Sediment - Sediment is made up of tiny soil particles that are washed or blown into surface waters. It is the major pollutant by volume in surface water. Suspended soil particles can cause the water to look cloudy or turbid. The fine sediment particles also act as a vehicle to transport other pollutants including nutrients, trace metals, and hydrocarbons. Construction sites are typically the largest source of sediment for urban areas under development.

Nutrients - Nutrients are a major concern for surface water quality. Phosphorous and nitrogen are of special concern because they can cause algal blooms and excessive vegetative growth. Of the two, phosphorus is usually the limiting nutrient that controls the growth of algae in lakes. The orthophosphorous form of phosphorus is readily available for plant growth. The ammonium form of nitrogen can also have severe effects on surface water quality. The ammonium is converted to nitrate and nitrite forms of nitrogen in a process called nitrification. This process consumes large amounts of oxygen, which can impair the dissolved oxygen levels in water. The nitrate form of nitrogen is very soluble and is found naturally at low levels in water. When nitrogen fertilizer is applied to lawns or other areas in excess of plant needs, nitrates can leach below the root zone, eventually reaching groundwater. Orthophosphate from auto emissions also contributes phosphorus in areas with heavy automobile traffic. As a general rule of thumb, nutrient export is greatest from development sites with the most impervious areas. Other problems resulting from excess nutrients are 1) surface algal scums, 2) water discolorations, 3) odors, 4) toxic releases, and 5) overgrowth of plants. Common measures for nutrients are total nitrogen, organic nitrogen, total Kjeldahl nitrogen (TKN), nitrate, ammonia, total phosphate, and total organic carbon (TOC).

Trace Metals - Trace metals are primarily a concern because of their toxic effects on aquatic life and their potential to contaminate drinking water supplies. The most common trace metals found in urban runoff are lead, zinc, and copper. Fallout from automobile emissions is also a major source of lead in urban areas. A large fraction of the trace metals in urban runoff are attached to sediment and this effectively reduces the level, which is immediately available for biological

uptake and subsequent bioaccumulation. Metals associated with the sediment settle out rapidly and accumulate in the soils. Also, urban runoff events typically occur over a shorter duration, which reduces the amount of exposure, which could be toxic to the aquatic environment. The toxicity of trace metals in runoff varies with the hardness of the receiving water. As total hardness of the water increases, the threshold concentration levels for adverse effects increases.

Oxygen-Demanding Substances - Aquatic life is dependent on the dissolved oxygen (DO) in the water and when organic matter is consumed by microorganisms then DO is consumed in the process. A rainfall event can deposit large quantities of oxygen demanding substance in lakes and streams. The biochemical oxygen demand of typical urban runoff is on the same order of magnitude as the effluent from an effective secondary wastewater treatment plant. A problem from low DO results when the rate of oxygen-demanding material exceeds the rate of replenishment. Oxygen demand is estimated by direct measure of DO and indirect measures such as biochemical oxygen demand (BOD), chemical oxygen demand (COD), oils and greases, and total organic carbon (TOG).

Bacteria - Bacteria levels in undiluted urban runoff exceed public health standards for water contact recreation almost without exception. Studies have found that total coliform counts exceeded EPA water quality criteria at almost every site and almost every time it rained. The coliform bacteria that are detected may not be a health risk in themselves, but are often associated with human pathogens.

Oil and Grease - Oil and grease contain a wide variety of hydrocarbons some of which could be toxic to aquatic life in low concentrations. These materials initially float on water and create the familiar rainbow-colored film. Hydrocarbons have a strong affinity for sediment and quickly become absorbed to it. The major source of hydrocarbons in urban runoff is through leakage of crankcase oil and other lubricating agents from automobiles. Hydrocarbon levels are highest in the runoff from parking lots, roads, and service stations. Residential land uses generate less hydrocarbons export, although illegal disposal of waste oil into storm waters can be a local problem.

Other Toxic Chemicals - Priority pollutants are generally related to hazardous wastes or toxic chemicals and can be sometimes detected in storm water. Priority pollutant scans have been conducted in previous studies of urban runoff, which evaluated the presence of over 120 toxic chemicals and compounds. The scans rarely revealed toxins that exceeded the current safety criteria. The urban runoff scans were primarily conducted in suburban areas not expected to have many sources of toxic pollutants (with the possible exception of illegally disposed or applied household hazardous wastes). Measures of priority pollutants in storm water include the following: 1) phthalate (plasticizer compound), 2) phenols

and creosols (wood preservatives), 3) pesticides and herbicides, 4) oils and greases, and 5) metals.

2.4.2 Physical Characteristics of Surface Water Quality

Standard parameters, which can assess the quality of storm water, provide a method of measuring impairment. A background of these typical characteristics assists in understanding water quality requirements. The quantity of a material in the environment and its characteristics determine the degree of availability as a pollutant in surface runoff. In an urban environment, the quantity of certain pollutants in the environment is a function of the intensity of the land use. For instance, a high density of automobile traffic makes a number of potential pollutants (such as lead and hydrocarbons) more available. The availability of a material, such as a fertilizer, is a function of the quantity and the manner in which it is applied. Applying fertilizer in quantities that exceed plant needs leaves the excess nutrients available for loss to surface or groundwater.

The physical properties and chemical constituents of water traditionally have served as the primary means for monitoring and evaluating water quality. Evaluating the condition of water through a water quality standard refers to its physical, chemical, or biological characteristics. Water quality parameters for storm water comprise a long list and are classified in many ways. In many cases, the concentration of an urban pollutant, rather than the annual load of that pollutant, is needed to assess

a water quality problem. Some of the physical, chemical or biological characteristics that evaluate the quality of the surface runoff are outlined below:

Dissolved Oxygen - Dissolved oxygen in the water has a pronounced effect on the aquatic organisms and the chemical reactions that occur. It is one of the most important biological water quality characteristics in the aquatic environment. The dissolved oxygen concentration of a water body is determined by the solubility of oxygen, which is inversely related to water temperature, pressure, and biological activity. Dissolved oxygen is a transient property that can fluctuate rapidly in time and space. Dissolved oxygen represents the status of the water system at a particular point and time of sampling. The decomposition of organic debris in water is a slow process and the resulting changes in oxygen status respond slowly also. The oxygen demand is an indication of the pollutant load and includes measurements of biochemical oxygen demand or chemical oxygen demand.

Biochemical Oxygen Demand (BOD) - The biochemical oxygen demand (BOD) is an index of the oxygen-demanding properties of the biodegradable material in the water. Samples are taken from the field and incubated in the laboratory at 20°C, after which the residual dissolved oxygen is measured. The BOD value commonly referenced is the standard 5-day values. These values are useful in assessing stream pollution loads and for comparison purposes.

Chemical Oxygen Demand - The chemical oxygen demand (COD) is a measure of the pollutant loading in terms of complete chemical oxidation using strong oxidizing agents. It can be determined quickly because it does not rely on bacteriological actions as with BOD. COD does not necessarily provide a good index of oxygen demanding properties in natural waters.

Total Dissolved Solids (TDS) - TDS concentration is determined by evaporation of a filtered sample to obtain residue whose weight is divided by the sample volume. The TDS of natural waters varies widely. There are several reasons why TDS is an important indicator of water quality. Dissolved solids affect the ionic bonding strength related to other pollutants such as metals in the water. TDS are also a major determinant of aquatic habitat. TDS affects saturation concentration of dissolved oxygen and influences the ability of a water body to assimilate wastes. Eutrophication rates depend on total dissolved solids.

pH - The pH of water is the negative log, base 10, of the hydrogen ion (H⁺) activity. A pH of 7 is neutral; a pH greater than 7 indicates alkaline water; a pH less than 7 represents acidic water. In natural water, carbon dioxide reactions are some of the most important in establishing pH. The pH at any one time is an indication of the balance of chemical equilibrium in water and affects the availability of certain chemicals or nutrients in water for uptake by plants. The pH of water directly affects fish and other aquatic life and generally toxic limits are pH values less than 4.8 and greater than 9.2.

Alkalinity - Alkalinity is the opposite of acidity, representing the capacity of water to neutralize acid. Alkalinity is also linked to pH and is caused by the presence of carbonate, bicarbonate, and hydroxide, which are formed when carbon dioxide is dissolved. A high alkalinity is associated with a high pH and excessive solids. Most streams have alkalinities less than 200 mg/l and ranges of alkalinity of 100-200mg/l seem to support well-diversified aquatic life.

Specific Conductance - The specific conductivity of water, or its ability to conduct an electric current, is related to the total dissolved ionic solids. Long term monitoring a project waters can develop a relationship between specific conductivity and TDS. Its measurement is quick and inexpensive and can be used to approximate TDS. Specific conductivities in excess of 2000 µhms/cm indicate a TDS level too high for most freshwater fish.

Turbidity - The clarity of water is an important indicator of water quality that relates to the ability of photosynthetic light to penetrate. Turbidity is an indicator of the property of water that causes light to become scattered or absorbed. Suspended clays and other organic particles cause turbidity. It can be used as an indicator of certain water quality constituents such as predicting the sediment concentrations.

Nitrogen (N) - Sources of nitrogen in storm water are from the additions of organic matter to water bodies or chemical additions. Ammonia and nitrate are important nutrients for the growth of algae and other plants. Excessive nitrogen can lead to eutrophication since nitrification consumes dissolved oxygen in the water. Nitrogen occurs in many forms. Organic Nitrogen breaks down into ammonia, which eventually becomes oxidized to nitrate-nitrogen, a form available for plants. High concentrations of nitrate-nitrogen (N/N) in water can stimulate growth of algae and other aquatic plants, but if phosphorus (P) is present, only about 0.30 mg/l of nitrate-nitrogen is needed for algal blooms. Some fish life can be affected when nitrate- nitrogen exceeds 4.2 mg/l. There are a number of ways to measure the various forms of aquatic nitrogen. Typical measurements of nitrogen include Kjeldahl nitrogen (organic nitrogen plus ammonia); ammonia; nitrite plus nitrate; nitrite; and nitrogen in plants. The principal water quality criteria for nitrogen focus on nitrate and ammonia.

Phosphorus (P) - Phosphorus is an important component of organic matter. In many water bodies, phosphorus is the limiting nutrient that prevents additional biological activity from occurring. The origin of this constituent in urban storm water discharge is generally from fertilizers and other industrial products. Orthophosphate is soluble and is considered to be the only biologically available form of phosphorus. Since phosphorus strongly associates with solid particles and is a significant part of organic material, sediments influence concentration in water and are an important component of the phosphorus cycle in streams. The primary methods of measurement include detecting orthophosphate and total phosphorus.

2.4.3 Existing Storm Water Quality

The project site lacks any measured data on storm water runoff quality. In the absence of site-specific data, expected storm water quality can be qualitatively discussed by relating typical pollutants to specific land uses.

Currently, the site contains residential dwellings, commercial/industrial buildings, and barren land. The entire site eventually drains to the Stanton Storm Channel, which is tributary to the Anaheim Bay. Anaheim Bay is a 303d listed water body where the associated pollutants of concern are metals and pesticides. Pollutants associated with the existing site land uses and adjacent roadways include: trash, nutrients, bacteria, oxygen demanding substances, pesticides, heavy metals, organic materials, oil and grease, and household hazardous wastes. The barren areas could add suspended solids to the storm water runoff.

Currently, the Specific Plan area does not contain any structural Best Management Practices (BMPs), which could potentially decrease the amount of pollutants in stormwater runoff.

3.0 Proposed Project

A proposed conditions hydrologic analysis was prepared for the Town Center Specific Plan. Hydrologic calculations to evaluate surface runoff associated with the 10-year, 25-year, and 100-year storm frequencies from the tributary drainage areas were performed using the Rational Method. Proposed conditions investigated include changes to land use, changes to drainage patterns, assumed storm drain configuration, hydrology, floodplain mapping, and surface water quality.

3.1 Proposed Land Uses

The updated Town Center Specific Plan, comprised of 156.9 acres, is intended to reinvigorate and transform the Beach Boulevard corridor into a thriving mixed-use and pedestrian-friendly community while protecting the existing single-family uses. As depicted in **Figure 7**, Land Use Plan, the Town Center Specific Plan will create new gateway opportunities to announce the arrival into the Stanton Town Center. These gateways will be located at the intersections of Cerritos Avenue/Beach Boulevard and Katella Avenue/Beach Boulevard and will include a variety of place-making treatments such as outdoor plazas, interesting architecture, enhanced landscape, and public art.

“Retail-Oriented Mixed-Use,” intended to create a pedestrian-friendly mixed-use district, is concentrated along Main Street and a portion of Chester Avenue. A mix of residential and service/retail uses would be located within this district, and some existing single-family homes would be allowed to operate compatible retail businesses out of the existing houses or maintaining the current uses, creating a unique live/work environment. Angled parking is already provided along portions of Main Street and will be continued as part of the plan.

One of the Land Use Plan’s main focal elements is to create a “Main Street” environment by extending Main Street easterly and terminating the street at a new sizable public plaza/park within the existing industrial area. The Specific Plan envisions that predominantly residential uses would surround this new park, introducing a new community into the City.

The Specific Plan includes a new outdoor plaza along Beach Boulevard, located just north of Union Pacific’s Stanton Industrial Spur rail line. Another park is considered south of this spur near the intersection of Chester and Court Avenues. To access this park and to improve connectivity in general, the Specific Plan includes extending Court Avenue southerly through the former Pacific Electric right-of-way and Stanton Industrial Spur to connect to Katella Avenue. Additionally, the Specific Plan encourages the abandonment of alleys throughout the Specific Plan area. Alley vacation opportunity areas are depicted on Exhibit 2, Potential Alley Vacations.

In the southern portion of the Specific Plan area is the “Industrial Mixed-Use” district, which will allow revitalized industrial uses that are compatible with future residential uses in the area. Uses within this district are anticipated to be research and development (R&D), light industrial, restaurants, breweries/distilleries, commercial

cannabis (currently permitted within this area), and other compatible uses. These uses could be located on individual/multiple parcels or in a campus-like setting. Incompatible uses, such as outdoor contractor's yards, automotive uses, outdoor storage, and manufacturing uses, would not be permitted in the future; however, existing uses may continue. The Specific Plan will include policies, guidelines and standards designed to enhance safety throughout the Town Center area.

3.2 Hydrology

Project hydrology (based on assumed flow paths and storm drain locations) was completed to determine the impacts that the new development would have on storm runoff. Hydrologic calculations to evaluate surface runoff associated with the 10-year, 25-year, and 100-year storm frequencies from the tributary drainage areas were performed using the AES Rational Method as described in **Section 2.2.1**. Hydrologic parameters used in the analysis, such as rainfall, impervious values, time of concentration and soil classification, are presented in the Orange County Hydrology Manual. The watershed subarea boundaries were delineated using proposed project maps and were assumed to be equivalent to the existing condition watersheds.

3.2.1 Proposed Watershed Description

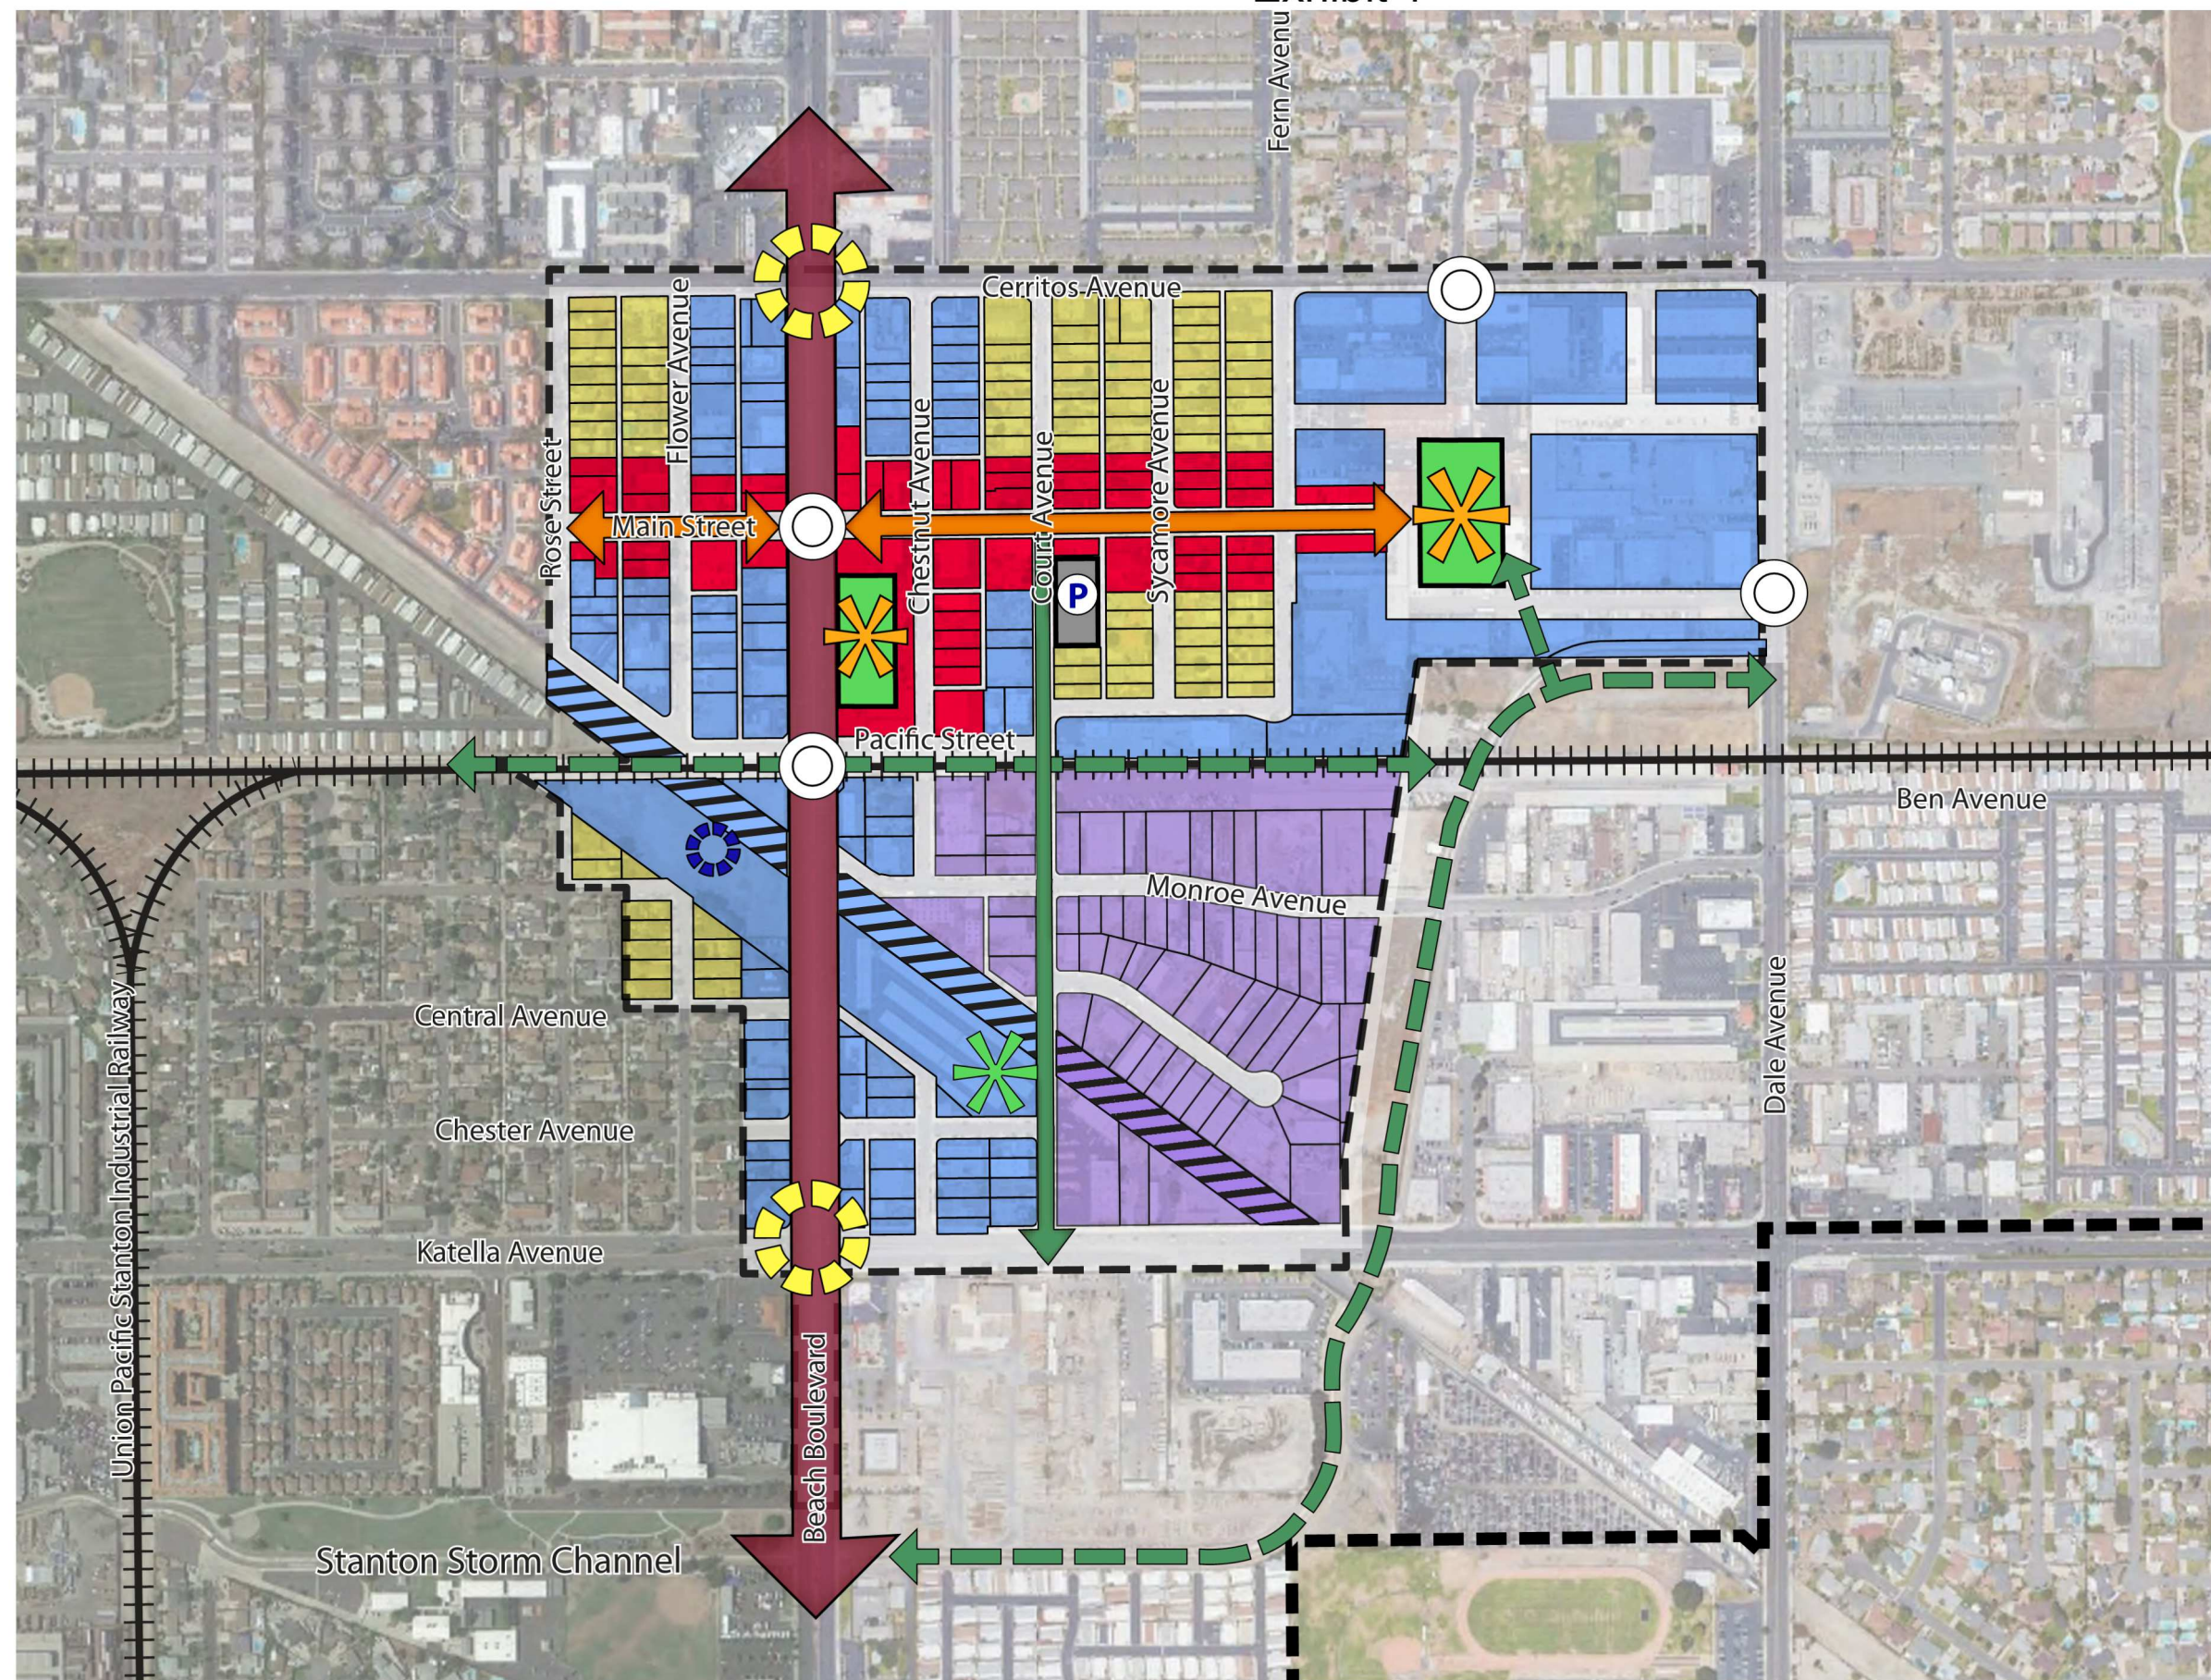

The Town Center project includes demolition of structures, the development of the Transit Center, and the revitalization of residential and commercial structures. In the proposed condition the overall impervious area of the site would increase in some existing residential areas and decrease in existing industrial areas. The increase is caused by the development of the transit center and commercial sites where existing residential dwellings and barren lands are located. The decrease in imperviousness occurs in areas where the existing land use is commercial or industrial, and the proposed land use is either mixed-use or open space (i.e. parks). **Table 3.1** provides a breakdown of the proposed land uses based on the hydrology analysis and **Figure 7** depicts the proposed land uses on a plan.

Note land uses were simplified for hydrologic calculations when compared to the General Plan. Mixed-Use areas were assumed to be equivalent to the condominium land use for the updated subareas in this analysis, because the percent impervious are planned to be similar (Note: Commercial land use was substituted for the mixed-use land use in the original hydrology analysis performed by RBF Consulting). Also, new developments will be required to infiltrate, harvest and reuse, evapotranspire, or biotreat/biofilter a portion of the storm water volume (85th percentile storm) per the current County requirements, which inherently would result in some reduction in runoff through the implementation of post-construction storm water best management practices (BMPs).

The proposed project drainage is assumed to not alter existing drainage paths. The overall site will still drain in a south-western direction and the overall site slope is assumed to be equal to existing conditions, 0.002 ft/ft. Hydrologic properties such as

road slope, type of conveyance and land use are characterized for each subarea. The watershed subareas were utilized to develop a hydrology model. The Proposed Condition Hydrology Map is shown on **Figure 8**.

3.2.2 Proposed Condition Surface Water Hydrology

Appendix B includes the detailed results from the 10-year, 25-year, and 100-year Rational Method Analysis for the expanded subareas as part of this Specific Plan. Results of the proposed condition hydrologic analysis are summarized in Table 3.2.

Table 3.2 - Proposed Conditions Peak Flowrates				
Subarea	Total Area	10-yr Peak Q (cfs)	25-yr Peak Q (cfs)	100-yr Peak Q (cfs)
A	71.8	66.0	83.1	116.5
B&C	9.4	16.1	19.7	25.8
D	1.5	2.9	3.6	5.0
E	1.4	2.4	3.4	4.8
F	32.0	47.0	58.6	77.8
G	13.7	26.6	32.4	42.0
H	21.0	26.0	32.2	41.9

3.3 Water Quality

The proposed Town Center will consist of residential, commercial, industrial, mixed-use, and open- space land uses. Mixed-use consists of commercial, retail, industrial, and residential lots. Based on the proposed land uses, the site has the potential to generate all types of pollutants, from bacteria/viruses to oil and grease.

4.0 PROPOSED IMPACTS AND/OR SUGGESTED SPECIFIC PLAN POLICIES

Mitigation would reduce impacts as a result of the development of the Town Center. The following section discusses both storm water conveyance and storm water quality mitigation measures.

4.1 Hydrologic and Hydraulic Impacts

The Town Center project could result in an increase in the amount of impervious areas on site where existing residential or open space are located in areas designated for commercial or mixed-use (i.e. subareas B & C), which increases the proposed condition runoff. The potential for hydraulic impacts to existing facilities would require mitigation of site runoff. The impacts to Stanton Storm Channel would need to be thoroughly analyzed due to the fact that the channel was designed and constructed to handle the 25-year storm event. Based on current county standards the Stanton Storm Channel is deficient because all regional facilities are to be designed for the 100-year storm event. This deficiency could potentially cause significant flooding around the channel and in the local storm drain systems.

Table 4.1 provides a comparison of the existing conditions to the proposed conditions for the 100- year storm event. It shows that the discharge is generally matched or decreased in the project conditions (with the exception of subareas B & C), thus decreasing the flow exiting the site. No diversions to the tributary areas were considered when comparing existing and proposed conditions.

Table 4.1 - 100-year Site Discharge Comparison			
Watershed	Existing Discharge (cfs)	Proposed Discharge lcfsl	Percent Increase / Decrease
A	123.0	116.5	-5.3%
B&C	22.3	25.8	15.7%
D	5.0	5.0	0.0%
E	4.8	4.8	0.0%
F	84.8	77.8	-8.3%
G	46.6	42.0	-9.9%
H	45.4	41.9	-7.7%

Flood control mitigation will be handled by each individual site. Until downstream facilities are constructed, sites must contain proposed runoff or mitigate flow rates to equivalent or less than existing conditions for all storm events. Facility upgrades at

Court Street, north and south of the Pacific Electric Railway easement are already part of the City of Stanton's Capital Improvement Plan.

4.2 Floodplain Impacts

The Town Center site is located in Zone X, which is within the 500-year floodplain and the 100-year floodplain with average depths of less than 1 foot or drainage areas less than 1 square mile. The project is not in a special flood hazard area (i.e. Zone A). No mitigation is proposed.

4.3 Water Quality Impacts

Due to the development of additional commercial and industrial mixed-use sites, there is potential for an increase in heavy metal contamination. This increase is of significant concern because Anaheim Bay is a 303(d) listed water body with metals and pesticides as the associated pollutants of concern. Pesticide contamination should not increase based on the land uses and current storm water quality requirements to be implemented in the new development projects' post-construction water quality management plans (WQMPs).

4.3.1 Construction Water Quality Impacts

To obtain authorization for discharges of stormwater from construction sites, a Construction General Permit (2009/2010 CGP) must be obtained for large and small construction activities that result in a total land disturbance of equal to or greater than one acre. Permit coverage is required from the "commencement of construction activities" until "final stabilization". The goal of this permit is to minimize the discharge of stormwater pollutants from construction activity. Construction phase Best Management Practices (BMPs) shall be installed and maintained for each major construction activity to minimize pollutants in stormwater discharges.

4.3.2 Construction Mitigation

Construction controls are separated from the rest of the water quality management because the measures are temporary and specific to the type of construction. Construction of the proposed redevelopment has the potential to produce typical pollutants such as nutrients, heavy metals, pesticides and herbicides, toxic chemicals related to construction and cleaning, waste materials including wash water, paints, wood, paper, concrete, food containers, and sanitary wastes, fuel, and lubricants.

To comply with the NPDES requirements, a Notice of Intent (NOI) would need to be prepared and submitted to the California State Water Resources Control Board providing notification and intent to comply with the State of California general permit. Prior to construction, a Storm Water Pollution Prevention Plan (SWPPP) is required for the construction activities onsite. A copy of the SWPPP must be available and implemented at the construction site at all times. The SWPPP outlines the source

control and/or treatment control BMPs that would avoid or mitigate runoff pollutants at the construction site to the "maximum extent practicable". BMPs such as those listed below can be found in the California Stormwater Best Management Practice Handbook - Construction Activity:

EC-1 Scheduling - Development of a written plan that includes sequencing of construction activities and the implementation of BMPs.

EC-5 Soil Binders - Apply and maintain a soil stabilizer to exposed soil surfaces.

EC-9 Earth Dikes and Drainage Swales - Used to divert off site runoff around the construction site, divert runoff from stabilized areas and disturbed areas, and direct runoff into sediment basins or traps.

EC-10 Velocity Dissipation Devices - Outlet protection, such as riprap, which is placed at the outlet of a pipe to prevent scour of the soil caused by concentrated, high velocity flows.

SE-1 Silt Fence - Composed of filter fabric, which has been entrenched, attached to support poles and sometimes backed by wire fence support. Silt fences promote sedimentation behind the fence of sediment-laden water.

SE-2 Sediment Basin - Temporary basin formed by excavation or by constructing an embankment so that sediment-laden runoff is temporarily detained under quiescent conditions, allowing sediment to settle out before the runoff is discharged.

SE-4 Check Dams - Small barrier constructed of rock, gravel bags, sandbags, fiber rolls, or reusable products, placed across a constructed swale or drainage ditch to decrease the potential erosion.

SE-5 Fiber Rolls - Straw, flax, or other similar materials bound into a tight tubular roll. Fiber rolls are used to reduce erosion.

SE-7 Street Sweeping and Vacuuming - Includes the use of self-propelled and walk-behind equipment to remove sediment from streets and roads, and to clean paved surfaces in preparation for final paving.

SE-10 Storm Drain Inlet Protection - Storm drain inlet protection measures temporarily pond runoff before it enters the storm drain, allowing sediment to settle. Typically consists of a sediment filter or impounding area around or upstream of storm drain.

NS-2 Dewatering Operations - This operation requires the use of sediment controls to prevent or reduce the discharge of pollutant to storm water from dewatering operations.

NS-3 Paving Operations - Prevent or reduce the runoff of pollutant from paving operations by proper storage of materials, protecting storm drain facilities during construction and training employees.

NS-8 Vehicle and Equipment Cleaning - Use off-site facilities or wash in designated areas to reduce pollutant discharge into the storm drain facilities.

NS-9 Vehicle and Equipment Fueling - Use off-site facilities, or designated areas with enclosing or coverings to reduce pollutant discharge into the storm drain facilities.

NS-10 Vehicle and Equipment Maintenance - Use off-site facilities, or designated areas with enclosing or coverings to reduce pollutant discharge into the storm drain facilities. In addition, run a "dry site" to prevent pollution discharge into storm drains.

WM-1 Material Delivery and Storage - Minimize the storage of hazardous materials onsite. If stored onsite keep in designated areas, install secondary containment, conduct regular inspections, and train employees.

WM-2 Material Use - Prevent and reduce the discharge of pesticides, herbicides, fertilizers, detergents, plaster, petroleum products and hazardous materials from entering the storm water.

WM-5 Solid Waste Management - This BMP describes the requirements to properly design and maintain trash storage areas. The primary design feature requires the storage of trash in covered areas

WM-6 Hazardous Waste Management - This BMP describes the requirements to properly design and maintain waste areas.

WM-8 Concrete Waste Management - Prevent and reduce pollutant discharge to storm water from concrete waste by performing on and off-site washouts in designated areas and training employees and consultants.

WM-9 Sanitary Septic Water Management - Provide convenient, well-maintained facilities, and arrange regular service and disposal of sanitary waste.

4.3.3 Development and Redevelopment Water Quality Impacts

The development of the Town Center in Stanton could potentially increase impervious areas, resulting in impacts to storm water quality. The project could affect pollutant loading immediately offsite and in Anaheim Bay, a 303d listed water body. The pollutants of concern for Anaheim Bay are metals and pesticides.

The site potentially falls under the Priority Project Category, which requires the incorporation of Treatment Control BMPs. Table 4.2- Priority Project Categories for North County Permit Area outlines what constitutes a Priority Project.

Table 4.2 - Priority Project Categories for North County Permit Area	
1.	New development projects that create 10,000 square feet or more of impervious surface. This category includes commercial, industrial, residential housing subdivisions, mixed-use, and public projects on private or public property that falls under the planning and building authority or the Permittees.
2.	Automotive repair shops. This applies to facilities that are categorized in any one of the following Standard Industrial Classification (SIC) codes 5013, 5014, 5541, 7532-7534, and 7536-7539.
3.	Restaurants where the land area of development is 5,000 square feet or more including parking area. This category is defined as facilities that sell prepared foods and drinks for consumption, including stationary lunch counters and refreshment stands selling prepared foods and drinks for immediate consumption (SIC code 5812).
4.	Hillside development greater than 5,000 square feet. Hillside development is defined as any development which is located in an area with known erosive soil conditions or where the natural slope is twenty-five percent or greater.
5.	Impervious surface of 2,500 square feet or more located within, directly adjacent to (within 200 feet), or discharging directly into receiving waters within Environmentally Sensitive Areas (ESAs).
6.	Parking lots 5,000 square feet or more including associated drive aisle, and potentially exposed to urban stormwater runoff. A parking lot is defined as a land area or facility for the temporary parking or storage of motor vehicles used personally, for business, or for commerce.
7.	Streets, roads, highways, and freeways. This category includes any paved surface that is 5,000 square feet or greater used for the transportation of automobiles, trucks, motorcycles, and other vehicles. (See discussion under (Section 7.II-1.5 relative to public projects).
8.	<p>All significant redevelopment projects, where significant redevelopment is defined as the addition or replacement of 5,000 or more square feet of impervious surface on an already developed site. Redevelopment does not include routine maintenance activities that are conducted to maintain original line and grade, hydraulic capacity, original purpose of the facility, or emergency redevelopment activity required to protect public health and safety.</p> <p>If the redevelopment results in the addition or replacement of less than 50 percent of the impervious area on-site and the existing development was not subject to WQMP requirement, the numeric sizing criteria discussed in Section 7.II-2.0 only applies to the addition or replacement area. If the addition or replacement accounts for 50 percent or more of the impervious area, the Project WQMP requirements apply to the entire development.</p>
9.	Retail Gasoline Outlets (RGOs). This category includes RGOs that meet the following criteria: (a) 5,000 square feet or more, or (b) a projected Average Daily Traffic (ADT) of 100 or more vehicles per day.

Mitigation for water quality impacts is recommended. The following sections describe recommended Best Management Practices (BMP's) for the proposed project.

4.3.4 Non-Structural/Source Control BMPs Mitigation

A Water Quality Management Plan (WQMP) would be created to include Non-Structural/Source Control BMPs in order to conform to the Orange County DAMP, the 2011 Orange County Model Water Quality Management Plan (WQMP) and the WQMP Technical Guidance Document (TGD).

The following are the minimum required mitigation by the Orange County DAMP Section 7: New Development/Significant Redevelopment regardless of their priority.

Education for Property Owners, Tenants, and Occupants - Practical information materials will be provided to residents/occupants/tenants on general housekeeping practices that contribute to the protection of stormwater quality. Different materials for residential, office commercial, retail commercial, vehicle-related commercial and industrial uses will be involved.

Activity Restrictions (Conditions, Covenants, and Restrictions) - Conditions, Covenants, and Restrictions (CC&Rs) will be prepared for the purpose of surface water quality protection, or alternatively, restrictions will be developed through lease terms. These restrictions must be included in the Project WQMP.

Common Area Landscape Management - Ongoing maintenance will be consistent with County Water Conservation Resolution or city equivalent, plus fertilizer and/or pesticide usage consistent with County Management Guidelines for Use of Fertilizers (DAMP Section 5.5), or city equivalent.

BMP Maintenance - Identify responsibility for implementation of each non-structural BMP and scheduled cleaning and/or maintenance of all structural BMP facilities.

Title 22 CCR Compliance - Compliance with Title 22 of the California Code of Regulations and relevant sections of the California Health & Safety Code regarding hazardous waste management.

Local Water Quality Permit Compliance - The Permittees, under the Water Quality Ordinance, may issue permits to ensure clean stormwater discharges from fuel dispensing areas and other areas of concern to public properties.

Spill Contingency Plan - Prepared by building operator for use by specified types of building or suite occupancies and which mandates stockpiling of cleanup materials, notification of responsible agencies, disposal of cleanup materials, documentation, etc.

Underground Storage Tank Compliance - Compliance with state regulations dealing with underground storage tanks, enforced by County Environmental Health on behalf of the state.

Hazardous Materials Disclosure Compliance - Compliance with Permittee ordinances is typically enforced by respective fire protection agency for the management of hazardous materials. The Orange County, health care agencies, and/or other appropriate agencies (i.e., the Department of Toxics Substances Control) are typically responsible for enforcing hazardous materials and hazardous waste handling and disposal regulations.

Uniform Fire Code Implementation - Compliance with Article 80 of the Uniform Fire Code.

Common Area Litter Control - Litter patrol, emptying of trash receptacles in common areas, and noting trash disposal violations by tenants/homeowners or businesses and reporting the violations to the owner/HONPOA for investigation.

Employee Training - Manual(s) for initial purchasers of business site or for development that is constructed for an unspecified use, commitment on behalf of the POA to prepare.

Housekeeping of Loading Docks - Loading typically found at large retail and warehouse-type commercial and industrial facilities shall be kept in a clean and orderly condition through a regular program for sweeping and litter control and immediate cleanup of spills and broken containers. Cleanup procedures should minimize or eliminate the use of water.

Common Area Catch Basin Inspection - For industrial/commercial developments and for developments with privately maintained drainage systems, the owner is required to have at least 80 percent of drainage facilities inspected, cleaned and maintained on annual basis with 100 percent of the facilities included in a two-year period. Cleaning should take place in the late summer/ early fall prior to the start of the rainy season. Drainage facilities include catch basins (storm drain outlets), detention basins, retention basins, sediment basins, open drainage channels and lift stations.

Street Sweeping Private Streets and Parking Lots - Streets are required to be swept prior to the storm season, in late summer or early fall.

Retail Gasoline Outlets - Retail gasoline outlets (RGOs) are required to follow operations and maintenance best management practices shown in the California Stormwater Quality Association (CASQA) Best Management Practice Guide for Retail Gasoline Outlets. This document may be obtained by downloading from the CASQA website at [http://www.casqa.org/resources/Retail Gasoline Outlet - BMP Guide.pdf](http://www.casqa.org/resources/Retail%20Gasoline%20Outlet%20BMP%20Guide.pdf) or from forthcoming CASQA website.

4.3.5 Structural/Treatment BMPs Mitigation

The Water Quality Management Plan should be created to include Structural/Treatment BMPs in order to conform to the Orange County DAMP, Model WQMP and TGD, and NPDES permit.

Storm Drain System Stenciling and Signage - Provide storm drain stenciling and signage at all storm drain inlets and catch basins within the project area that read "NO DUMPING- DRAINS TO OCEAN", signs and prohibitive language and/or graphical icons must be in place at public access points, and signs and stencils must be maintained.

Design Outdoor Hazardous Material Storage Areas to Reduce Pollutant Introduction - Where the plan of development includes outdoor areas for storage of hazardous materials that may contribute pollutants to the municipal storm drain system, the following stormwater BMPs are required: the hazardous materials shall be placed in an enclosed area or protected by secondary containment structures, storage area shall be paved and sufficiently impervious to contain leaks and spills, the storage area shall have a roof or awning, and any stormwater retained within the containment structure must be discharged to the street or storm drain system.

Use efficient irrigation systems & landscape design - The timing and application methods of irrigation water shall be designed to minimize the runoff of excess irrigation water into the storm drain system. The following methods have been implemented to reduce excessive irrigation runoff:

- Employment of irrometer devices (moisture sensors) to prevent irrigation after precipitation.
- The use of flow sensors and master control valves to shut down valve when triggered by a pressure drop. This shut down will control water loss in the event of broken sprinkler heads or lines.
- The irrigation application method considered shall be a drip system. A drip irrigation system is buried under the soil, which eliminates runoff and wind misting and minimizes water loss due to evaporation.
- The timing of irrigation water shall be designed at short repeat cycles to further eliminate irrigation water runoff and to minimize erosion, due to saturated soil.
- Native or drought-tolerant plants shall be used; the plants shall have low to medium water requirements and be appropriate for the climate of the area.
- Mulch is used in planter areas to minimize sediment in runoff.

Pervious Pavements - Pervious paving is used for light vehicle loading in parking areas. The term describes a system comprising a load-bearing, durable surface together with an underlying layered structure that temporarily stores water prior to infiltration or drainage to a controlled outlet. The surface can itself be porous such that water infiltrates across the entire surface of the material (e.g., grass

and gravel surfaces, porous concrete and porous asphalt), or can be built up of impermeable blocks separated by spaces and joints, through which the water can drain. This latter system is termed 'permeable' paving. Advantages of pervious pavements is that they reduce runoff volume while providing treatment, and are unobtrusive resulting in a high level of acceptability.

Loading and Unloading Dock Area - This BMP describes measures to prevent and reduce the discharge of pollutants to storm water from outdoor loading and unloading of materials. The primary design features to reduce pollution are: covering the loading/unloading docks; preventing storm run-on; and containing spills.

Trash Storage Areas - Trash storage areas are areas where trash receptacles are located for use as a repository for solid wastes. Stormwater runoff from areas where trash is stored or disposed of can be polluted. In addition, loose trash and debris can be easily transported by water or wind into nearby storm drain inlets, channels, and/or creeks. Waste handling operations that may be sources of stormwater pollution include dumpsters, litter control, and waste piles.

Design trash container areas so that drainage from adjoining roofs and pavement is diverted around the area(s) to avoid run-on. This might include berming or grading the waste handling area to prevent run-on of stormwater. Exterior trash enclosures shall have covered roofs to prevent stormwater from mixing with trash. The trash enclosures shall also have washout drains in the center that connect to the on-site sewer system.

Slopes and Channels - Protect slopes and channels by conveying runoff safely from the tops of slopes, stabilize disturbed slopes, utilize natural drainage systems, and vegetate slopes with native or drought resistant vegetation. Install energy dissipaters, such as riprap, at the outlets of new storm drains, culverts, conduits or channels that enter unlined channels and onsite conveyance channels shall be lined.

All projects, regardless of priority, shall adhere to each of the individual project category requirements that apply to the project.

Loading Dock Areas - Cover loading dock areas or design drainage to preclude urban run-on and runoff. Direct connections to municipal storm drain systems from below grade load docks are prohibited.

Maintenance Bays - Repair/maintenance bays shall be indoors; or designed to preclude urban run-on and runoff, drainage systems shall be designed to capture all wash water, leaks and spills and other comparable features shall be added to prevent discharges to the municipal storm drain system.

Vehicle and Equipment Washing - Requires the area must be self contained and/or covered, equipped with wash racks, equipped with a clarifier or other pretreatment facility, and other comparable features that prevent unpermitted discharges to the municipal storm drain system.

Outdoor Processing Areas - Outdoor process equipment operations determined to be a potential threat to water quality by the Permittee shall adhere to the following requirements: cover or enclose areas that would be the sources of pollutants; or, slope the area toward a sump location that will allow no discharge; or, discharge to a sanitary sewer system, grade or berm to prevent run-on from surrounding areas, and other comparable features that prevent unpermitted discharges to the municipal storm drain system. Installation of storm drains in areas of equipment repair is prohibited. Where wet material processing occurs, secondary containment structures shall be provided.

Equipment Wash Areas - Outdoor equipment/accessory washing and steam cleaning activities shall be self-contained or covered, the equipment wash area drainage system shall be designed to capture all wash water, and other comparable features that prevent discharges to the municipal storm drain system. Discharge to the municipal storm drain system is prohibited.

Fueling Areas - Fuel dispensing areas shall at a minimum must extend 6.5 feet from the corner of each fuel dispenser or the length of at which the hose and nozzle assembly may be operated plus 1 foot, whichever is less. The fuel dispensing area shall be paved with Portland cement concrete, have a slope of 2-4% to prevent ponding, prevent run-on from surrounding areas and an overhanging roof structure or canopy shall be provided.

Restaurant Equipment and Accessory Wash Areas - Needs to be self-contained with a grease trap and connected to the sewer. Adequate signs shall be provided and appropriately placed stating the prohibition of discharging wash water to the storm drain system.

4.3.6 On-site LID (Low Impact Development) and Treatment Control BMPs

According to the Orange County DAMP, WQMP and TGD, project-based (on-site) structural LID and Treatment Control BMPs should be implemented close to pollutant sources to minimize costs and maximize pollutant removal prior to runoff entering receiving waters. Due to the concern about metals and fertilizers in Anaheim Bay and the significant potential of metal pollutants being generated by the proposed site land uses, site BMPs should be chosen and designed to treat the pollutants of concern.

The following performance criteria for LID implementation are stated below:

- Priority Projects must infiltrate, harvest and use, evapotranspire, or biotreat/biofilter, the 85th percentile, 24-hour storm event (Design Capture

Volume).

- A properly designed biotreatment system may only be considered if infiltration, harvest and use, and evapotranspiration (ET) cannot be feasibly implemented for the full design capture volume. In this case, infiltration, harvest and use, and ET practices must be implemented to the greatest extent feasible and biotreatment may be provided for the remaining design capture volume.

Because a large portion of the Stanton Town Center project (primarily to the north and east) is within a shallow groundwater zone between depths of 5 to 10 feet, feasibility analyses need to be performed to determine which infiltration BMPs, if any, can be used for the site development projects. Refer to Figure XVI-2e in the Model WQMP TGD.

Below is a list of suggested BMPs from the California Stormwater Quality Association (CASQA) manual and the Orange County Model WQMP TGD:

Infiltration Trench (TC-10) - An infiltration trench is a long, narrow, rock-filled trench with no outlet that receives stormwater runoff. Runoff is stored in the void space between the stones and infiltrates through the bottom and into the soil matrix. Infiltration trenches perform well for removal of fine sediment and associated pollutants. Pretreatment using buffer strips, swales, or detention basins is important for limiting amounts of coarse sediment entering the trench which can clog and render the trench ineffective. The potential for groundwater mounding should be evaluated if depth to seasonally high groundwater (unmounded) is less than 15 feet. Because the north and east portions of the Town Center project is located within a shallow groundwater zone between 5 and 10 feet depth, an infiltration trench would not be feasible in these areas.

Infiltration Basin (TC-11) - Shallow basin that is designed to infiltrate stormwater and use the soil's natural filtering capability to remove pollutants. Infiltration basins provide 100% reduction in the load discharged to the surface waters and has a high removal efficiency for metals. A site must be inspected for the appropriate soil and hydrogeologic properties and potential risk of groundwater contamination. Infiltration basins may not be appropriate for industrial sites or those with a high potential for spills. The potential for groundwater mounding should be evaluated if depth to seasonally high groundwater (unmounded) is less than 15 feet. Because the north and east portions of the Town Center project is located within a shallow groundwater zone between 5 and 10 feet depth, an infiltration basin would not be feasible in these areas.

Extended Detention Basin (TC-22) - Generally basins that contain an outlet designed to detain the stormwater runoff for a minimum amount of time to allow particles and associated pollutants to settle. Detention basins are relatively easy and expensive to construct and operate. Requires a watershed of greater than 5 acres and only has a moderate pollutant removal efficiency. Detention basins are generally not aesthetically pleasing.

Vegetated (Grass) Swales (TC-30) - Vegetated swales are open, shallow channels with vegetation covering the side slopes and bottom that collect and slowly convey runoff flow to downstream discharge points. They are designed to treat runoff through filtering by the vegetation in the channel, filtering through a subsoil matrix, and/or infiltration into the underlying soils. Swales can be natural or manmade. They trap particulate pollutants (suspended solids and trace metals), promote infiltration, and reduce the flow velocity of stormwater runoff. Vegetated swales can serve as part of a stormwater drainage system and can replace curbs, gutters and storm sewer systems.

Vegetated (Grass) Buffer Strip (TC-31) - Grassed buffer strips (vegetated filter strips, filter strips, and grassed filters) are vegetated surfaces that are designed to treat sheet flow from adjacent surfaces. Filter strips function by slowing runoff velocities and allowing sediment and other pollutants to settle and by providing some infiltration into underlying soils. Filter strips were originally used as an agricultural treatment practice and have more recently evolved into an urban practice. With proper design and maintenance, filter strips can provide relatively high pollutant removal. In addition, the public views them as landscaped amenities and not as stormwater infrastructure. Consequently, there is little resistance to their use.

Bioretention (TC-32) - Basins that function as a soil and plant-based filtration device that removes pollutants through a variety of physical, biological, and chemical treatment processes. This BMP generally consists of a grass buffer strip, sand bed, ponding area, organic layer or mulch layer, planting soil, and plants. Runoff is generally stored in the BMP and is released to the receiving water over a period of 48 hours. Bioretention has a high removal effectiveness for most targeted constituents, including metals. Bioretention facilities can enhance the landscape and are generally aesthetically pleasing. In areas where the native soil permeability is less than 0.5 in/hr an underdrain should be provided. Also, depth to mounded seasonally high groundwater shall not be less than 5 feet.

Media Filter (TC-40) - Generally two-chambered systems with a pretreatment settling basin and a filter bed filled with sand or other filtering material. Relatively high pollutant removal and has a medium to high removal efficiency for metals. Can be more expensive to construct than other BMPs and require more maintenance.

Water Quality Inlet (TC-50) - Water quality inlets (WQIs), also commonly called trapping catch basins, oil/grit separators or oil/water separators, consist of one or more chambers that promote sedimentation of coarse materials and separation of free oil (as opposed to emulsified or dissolved oil) from stormwater. Some WQIs also contain screens to help retain larger or floating debris, and many of

the newer designs also include a coalescing unit that helps promote oil/water separation.

These devices are appropriate for capturing hydrocarbon spills, but provide very marginal sediment removal and are not very effective for treatment of stormwater runoff. WQIs typically capture only the first portion of runoff for treatment and are generally used for pretreatment before discharging to other best management practices (BMPs).

Media Filter (MP-40) - Generally two-chambered systems with a pretreatment settling basin and a filter bed filled with sand or other filtering material. The MP-40 media filter uses manufactured filters. Relatively high pollutant removal and has a medium to high removal efficiency for metals. Media filters require a smaller area than standard flatbed sand filters, wet ponds, and constructed wetlands. The manufactured media may be capable of removing dissolved pollutants.

Drain Insert (MP-52) - Drain inserts are manufactured filters or fabric placed in a drop inlet to remove sediment and debris. There are a multitude of inserts of various shapes and configurations, typically falling into one of three different groups: socks, boxes, and trays. The sock consists of a fabric, usually constructed of polypropylene. The fabric may be attached to a frame or the grate of the inlet holds the sock. Socks are meant for vertical (drop) inlets. Boxes are constructed of plastic or wire mesh. Typically a polypropylene “bag” is placed in the wire mesh box. The bag takes the form of the box. Most box products are one box; that is, the settling area and filtration through media occur in the same box. Some products consist of one or more trays or mesh grates. The trays may hold different types of media. Filtration media vary by manufacturer. Types include polypropylene, porous polymer, treated cellulose, and activated carbon.

Proprietary Biotreatment (BIO-7) - Proprietary biotreatment devices are devices that are manufactured to mimic natural systems such as bioretention areas by incorporating plants, soil, and microbes engineered to provide treatment at higher flow rates or volumes and with smaller footprints than their natural counterparts. Incoming flows are typically filtered through a planting media (mulch, compost, soil, plants, microbes, etc.) and either infiltrated or collected by an underdrain and delivered to the storm water conveyance system.

4.3.7 Hydromodification

Hydromodification is the alteration of natural flow characteristics and sediment supply in streams and channels due to urbanization, which can result from new development and significant redevelopment projects without appropriate preventative controls. Hydromodification controls are implemented in order to prevent hydromodification from happening. Urbanization commonly results in increased runoff volume and velocity; reduced infiltration; increased flow frequency, duration, and peaks; and faster time to reach peak flow. Under certain circumstances, urbanization could also result in the reduction in the amount of sediment supplied to the channel for transport. If the sediment supplied to the channel is reduced such that in-stream flows are transporting sediment faster than it can be replenished, then erosion of the channel's bed and bank may occur. These changes have the potential to permanently impact downstream channels and habitat integrity. A change to a Priority Project site's hydrologic characteristics would be considered a hydrologic condition of concern (HCOC) if the change would have a significant impact on downstream natural channels and habitat integrity.

Determining HCOCs in North Orange County:

In the North Orange County permit area, HCOCs are considered to exist if any streams located downstream from the project are determined to be potentially susceptible to hydromodification impacts and either of the following conditions exists:

- Post-development runoff volume for the 2-yr, 24-hr storm exceeds the pre-development runoff volume for the 2-yr, 24-hr storm by more than 5 percent

OR

- Time of concentration of post-development runoff for the 2-yr, 24-hr storm event reduces the time of concentration of the pre-development condition for the 2-yr, 24-hr storm event by more than 5 percent.

Based on Figure XVI-3b from the Orange County Model WQMP Technical Guidance Document (TGD), Susceptibility Analysis Anaheim Bay – Huntington Harbour, this project is in the potential areas of erosion, habitat and physical structure susceptibility. This is because not all downstream conveyance channels that will receive runoff from the project are engineered, hardened and regularly maintained to ensure design flow capacity (i.e. some reaches of Bolsa Chica Channel are earth trapezoidal (soft bottom) channels), and sensitive stream habitat areas will potentially be affected. Therefore, for new project developments the steps and requirements outlined in the Orange County Model WQMP and Technical Guidance Document would need to be followed to mitigate the runoff.

5.0 STORM DRAIN COST ESTIMATE

As discussed in **Section 3**, the proposed project would not alter the existing drainage pattern in the project area. On areas of existing barren land, it is assumed that all onsite drainage patterns follow the natural flow directions.

The existing facilities were originally designed per outdated standards and are undersized per the County's current standards. The County of Orange requires one foot of freeboard for all buildings for the 100-year storm event. The downstream storm drain facilities are designed for only the 25-year storm event, so no facilities on the project site are required to be upsized - because upsizing the upstream local storm drains would further tax the downstream facilities. Developers must be aware of the flooding potential and design accordingly. No storm drains are proposed as part of this specific plan because the Master Plan of Drainage from May 1971 has not been implemented. Until downstream facilities are constructed, all run off mitigation will be handled by each individual site to ensure that the proposed run off is equivalent or less than existing conditions.

Facility upgrades at Court Street, north and south of the Pacific Electric Railway easement are already part of the City of Stanton's Capital Improvement Plan. No additional cost analysis was required.

6.0 CONCLUSIONS

The Town Center Specific Plan consists of the revitalization of the City of Stanton. The proposed project involves mixed use, commercial, industrial, and residential expansion and development. The following sections detail the results of the hydrology and water quality investigations.

6.1 Drainage and Hydrology

The proposed project would generally decrease the discharge to existing storm drain facilities and streets, except for the increase in runoff in sub-watersheds B and C. Sub-watershed B contains the proposed Transit Center site and Watershed C contains a portion of Beach Boulevard.

The proposed projects will be required to match existing drainage patterns and mitigate the increased runoff on a site-by-site basis until downstream facilities are constructed. Mitigation must decrease the proposed runoff peak flow rates to existing conditions.

The hydrologic analysis performed for this study is intended for planning use only. More detailed hydrologic and hydraulic analyses would be required to determine exact impacts to existing facilities.

6.2 Floodplains

The project site is not located within a Special Flood Hazard Area, as determined by the National Flood Insurance Program. The proposed projects are not expected to increase flooding if there is onsite mitigation.

6.3 Water Quality

If a site project disturbs more than one acre of land, it falls under the General Construction Permit of the NPDES program. The general permit requires the applicant to file a public notice of intent (NOI) to discharge stormwater and to prepare and implement a construction phase Storm Water Pollution Prevention Plan (SWPPP) and post-construction Water Quality Management Plan (WQMP).

Each site should be evaluated to determine if it falls under a Priority Project Category - see **Table 4.2**. According to the Orange County DAMP, if a new development or significant redevelopment project qualifies as a Priority Project or requires discretionary action that will include a precise plan of development or requires issuance of a non-residential plumbing permit, a Project WQMP is required. If a site falls under the Priority Project category, it will be required to include Treatment Control BMP's.

A combination of structural, non-structural, and construction Best Management Practices are recommended to decrease impacts of the proposed project to the water quality of the stormwater runoff. It is essential that the selected BMPs address treatment

for all areas of the project area to assure that the runoff from the project site is being treated to the "maximum extent practicable".

6.4 Identified Data Gaps

Detailed topographic mapping of the project area and tributary areas would be required for a detailed hydrologic study. The existing mapping is adequate for planning level investigations only.

Storm drain plans for the system were not up to date. The GIS information provided by the City of Stanton depicts the Master Plan storm drain system had been constructed when a completely different type of system (conveyance type, alignment, etc.) was found during site visits. In addition, some storm drain as-built plans could not be found.

Hydrology studies that provide the basis of design for the local storm drains would also facilitate the detailed analysis. No such reports were available at the time of this study.

1. INTRODUCTION

This Traffic Impact Study (TIS) provides an analysis of the update to the Town Center Specific Plan which covers a 156.9-acre area in the northern portion of the City of Stanton. The proposed Specific Plan is shown in Figure 1. The project area currently includes a mix of small commercial developments, single-family and multi-family residential uses, a Southern California Edison (SCE) substation, and industrial uses. The proposed project is expected to include retail-oriented pedestrian-friendly mixed-use and industrial mixed-use districts while protecting the existing single-family uses.

The existing General Plan for the City allows for 1,399 multi-family units within the plan area. 4 of which have already been constructed. The Town Center Specific Plan, which is the subject of this report, allows for an additional 139 multi-family units. An Initial Study/Mitigated Negative Declaration (IS/MND) is prepared to analyze the potential impacts of the Project. While the IS/MND provides CEQA clearance for future projects within the Specific Plan area, any project/development beyond the 1,534 multi-family units or any commercial or industrial projects would require their own CEQA documentation.

This TIS provides an evaluation of the worst-case scenario of development of the Specific Plan area (i.e. most dense). As this report will illustrate, even the worst-case scenario is not expected to result in a significant impact on transportation. Further, no improvements are expected to be required at any of the study intersections.

Traffic impact analyses were conducted for existing conditions (2022) and buildout conditions (2050) with and without the project. The project boundaries, the study area, and the traffic impact analysis methodology used in this study are described in the following sections.

1.1. STUDY AREA

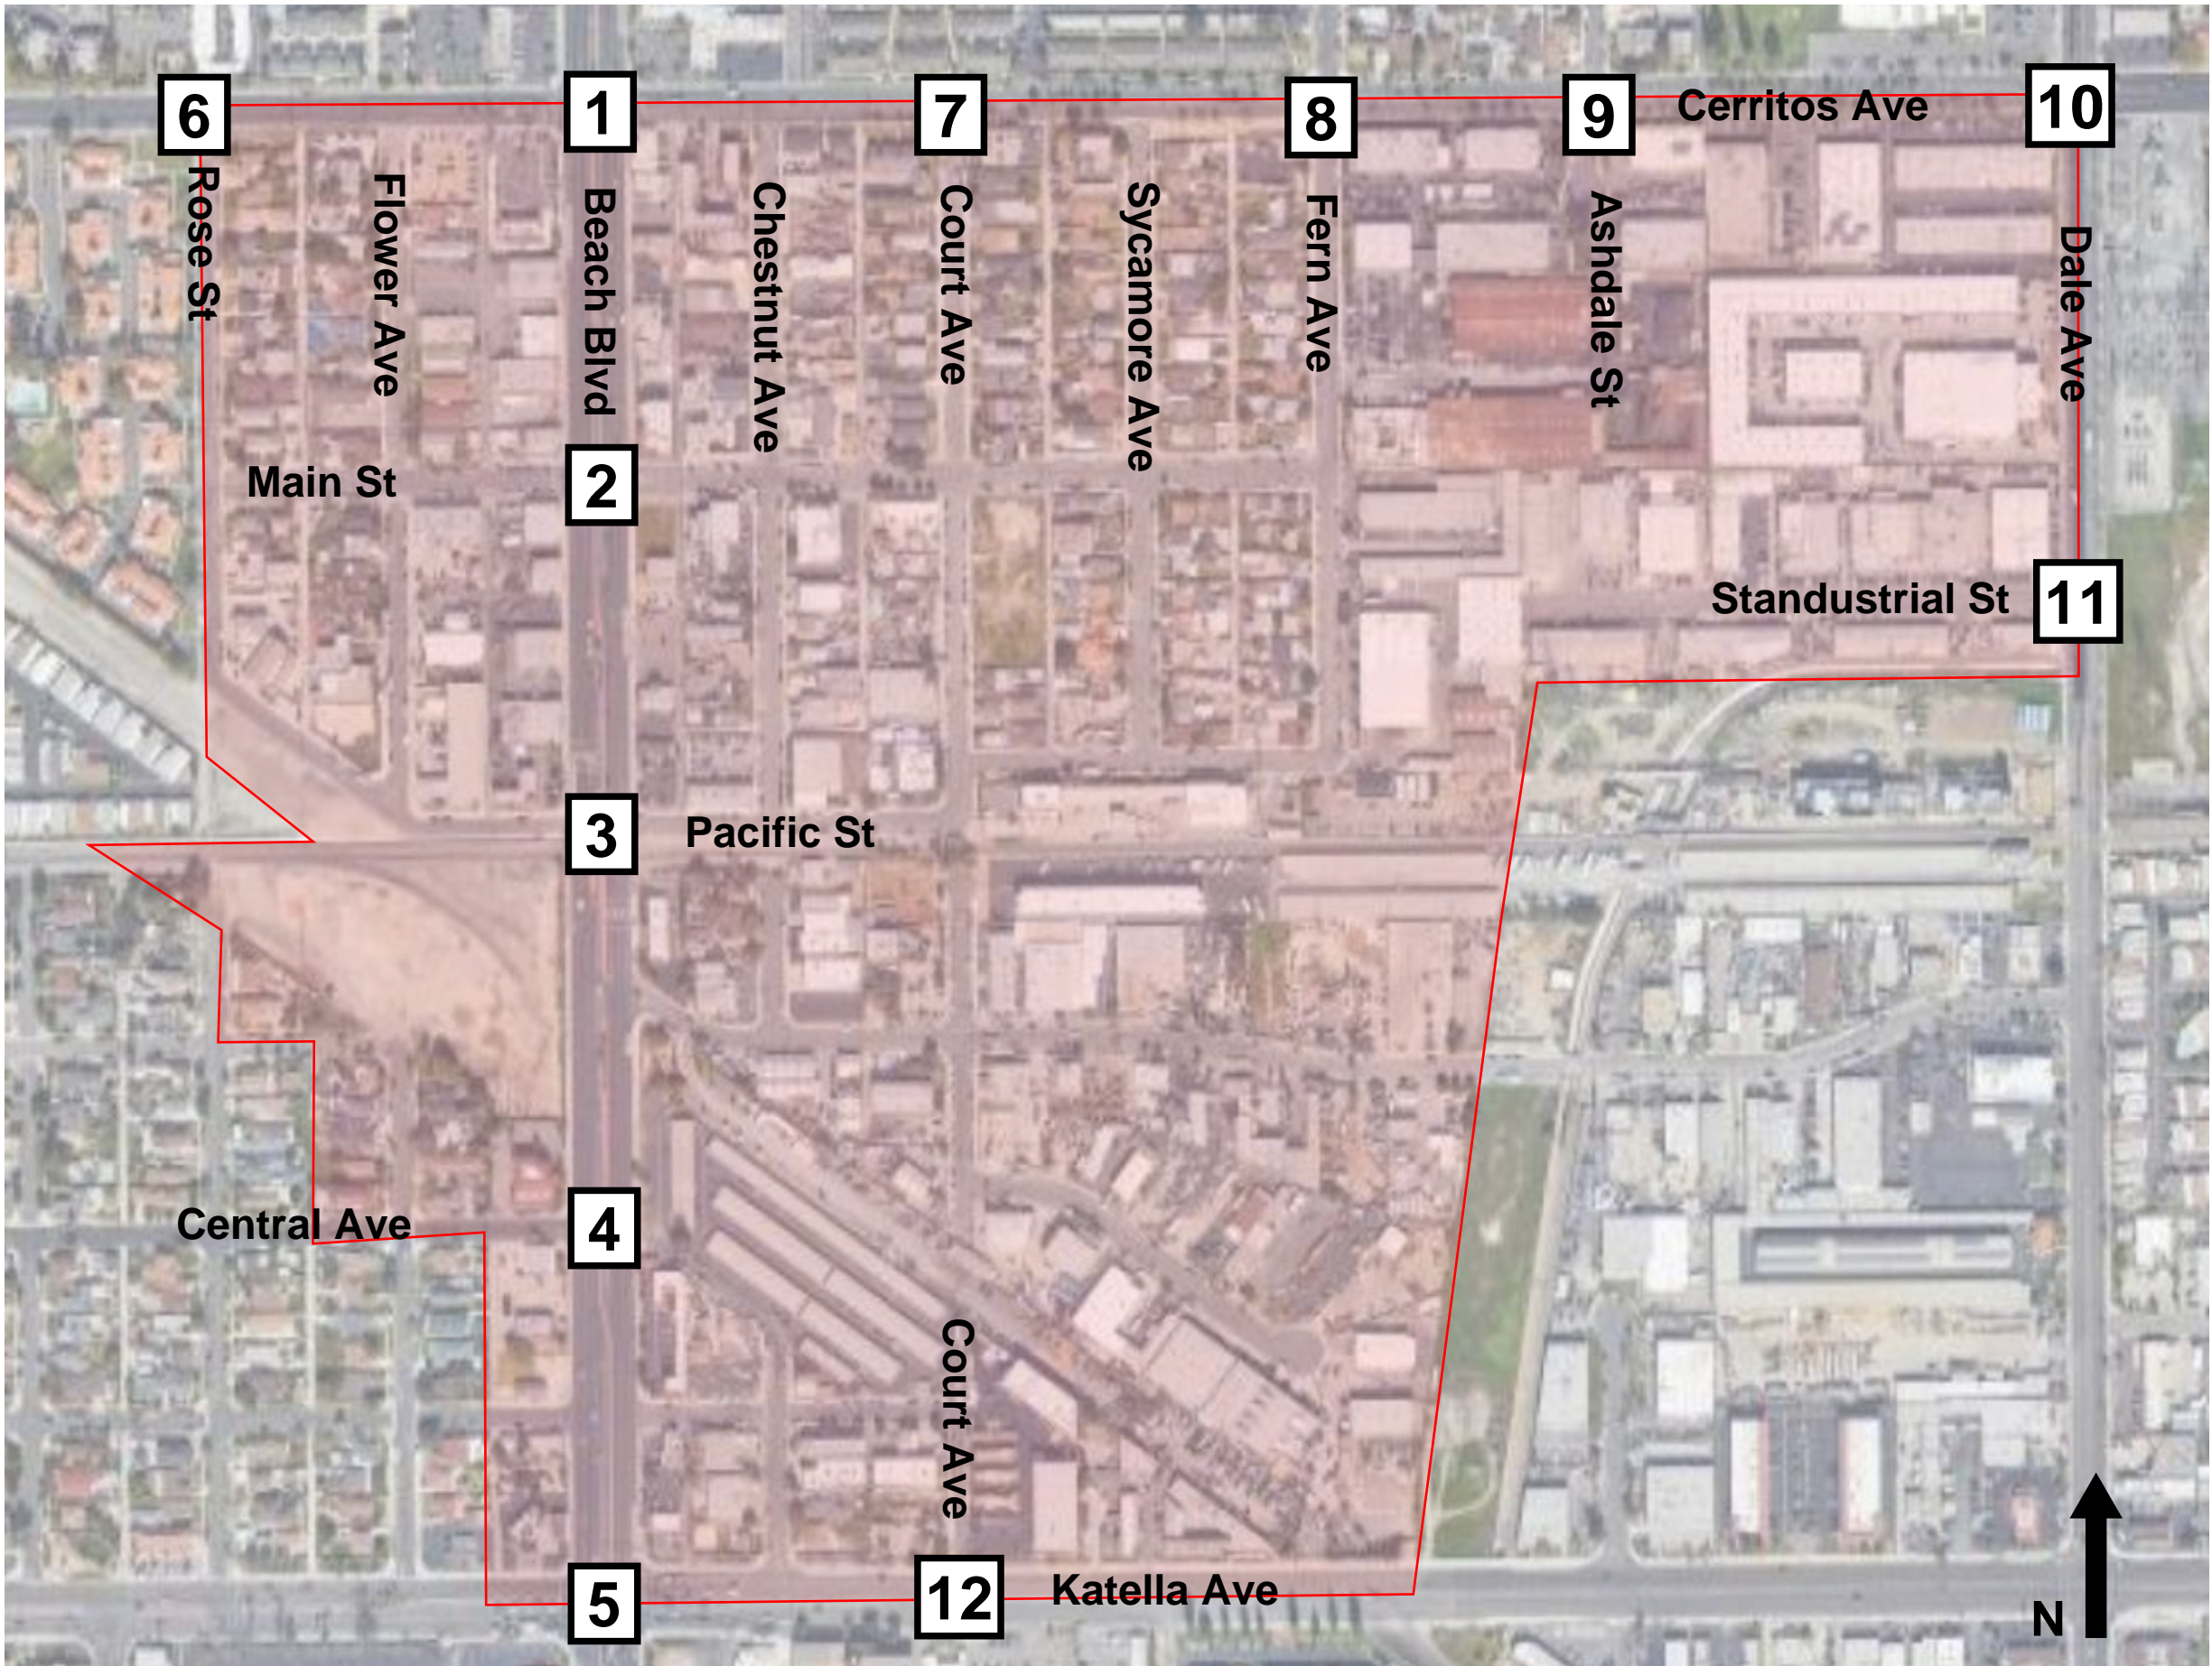

The City of Stanton is located in northwestern Orange County. The Town Center Specific Plan project includes a 156.9-acre area in the northern portion of the City of Stanton. The Specific Plan area is surrounded by Cerritos Avenue to the north, Dale Avenue to the east, Katella Avenue to the south, and Rose Street to the west. Existing land uses within the Specific Plan area boundaries include small commercial and automotive-related uses along Beach Boulevard; single-family and multi-family residential uses in the north and west; a Southern California Edison (SCE) substation and industrial uses in the east; and industrial and commercial uses in the south. The Pacific Electric Corridor runs diagonally through the Specific Plan area in a northwest-southeast direction and the Union Pacific Railroad oriented in an east-west direction bisects the Specific Plan area. The study intersections listed below were selected in coordination with the City engineer.

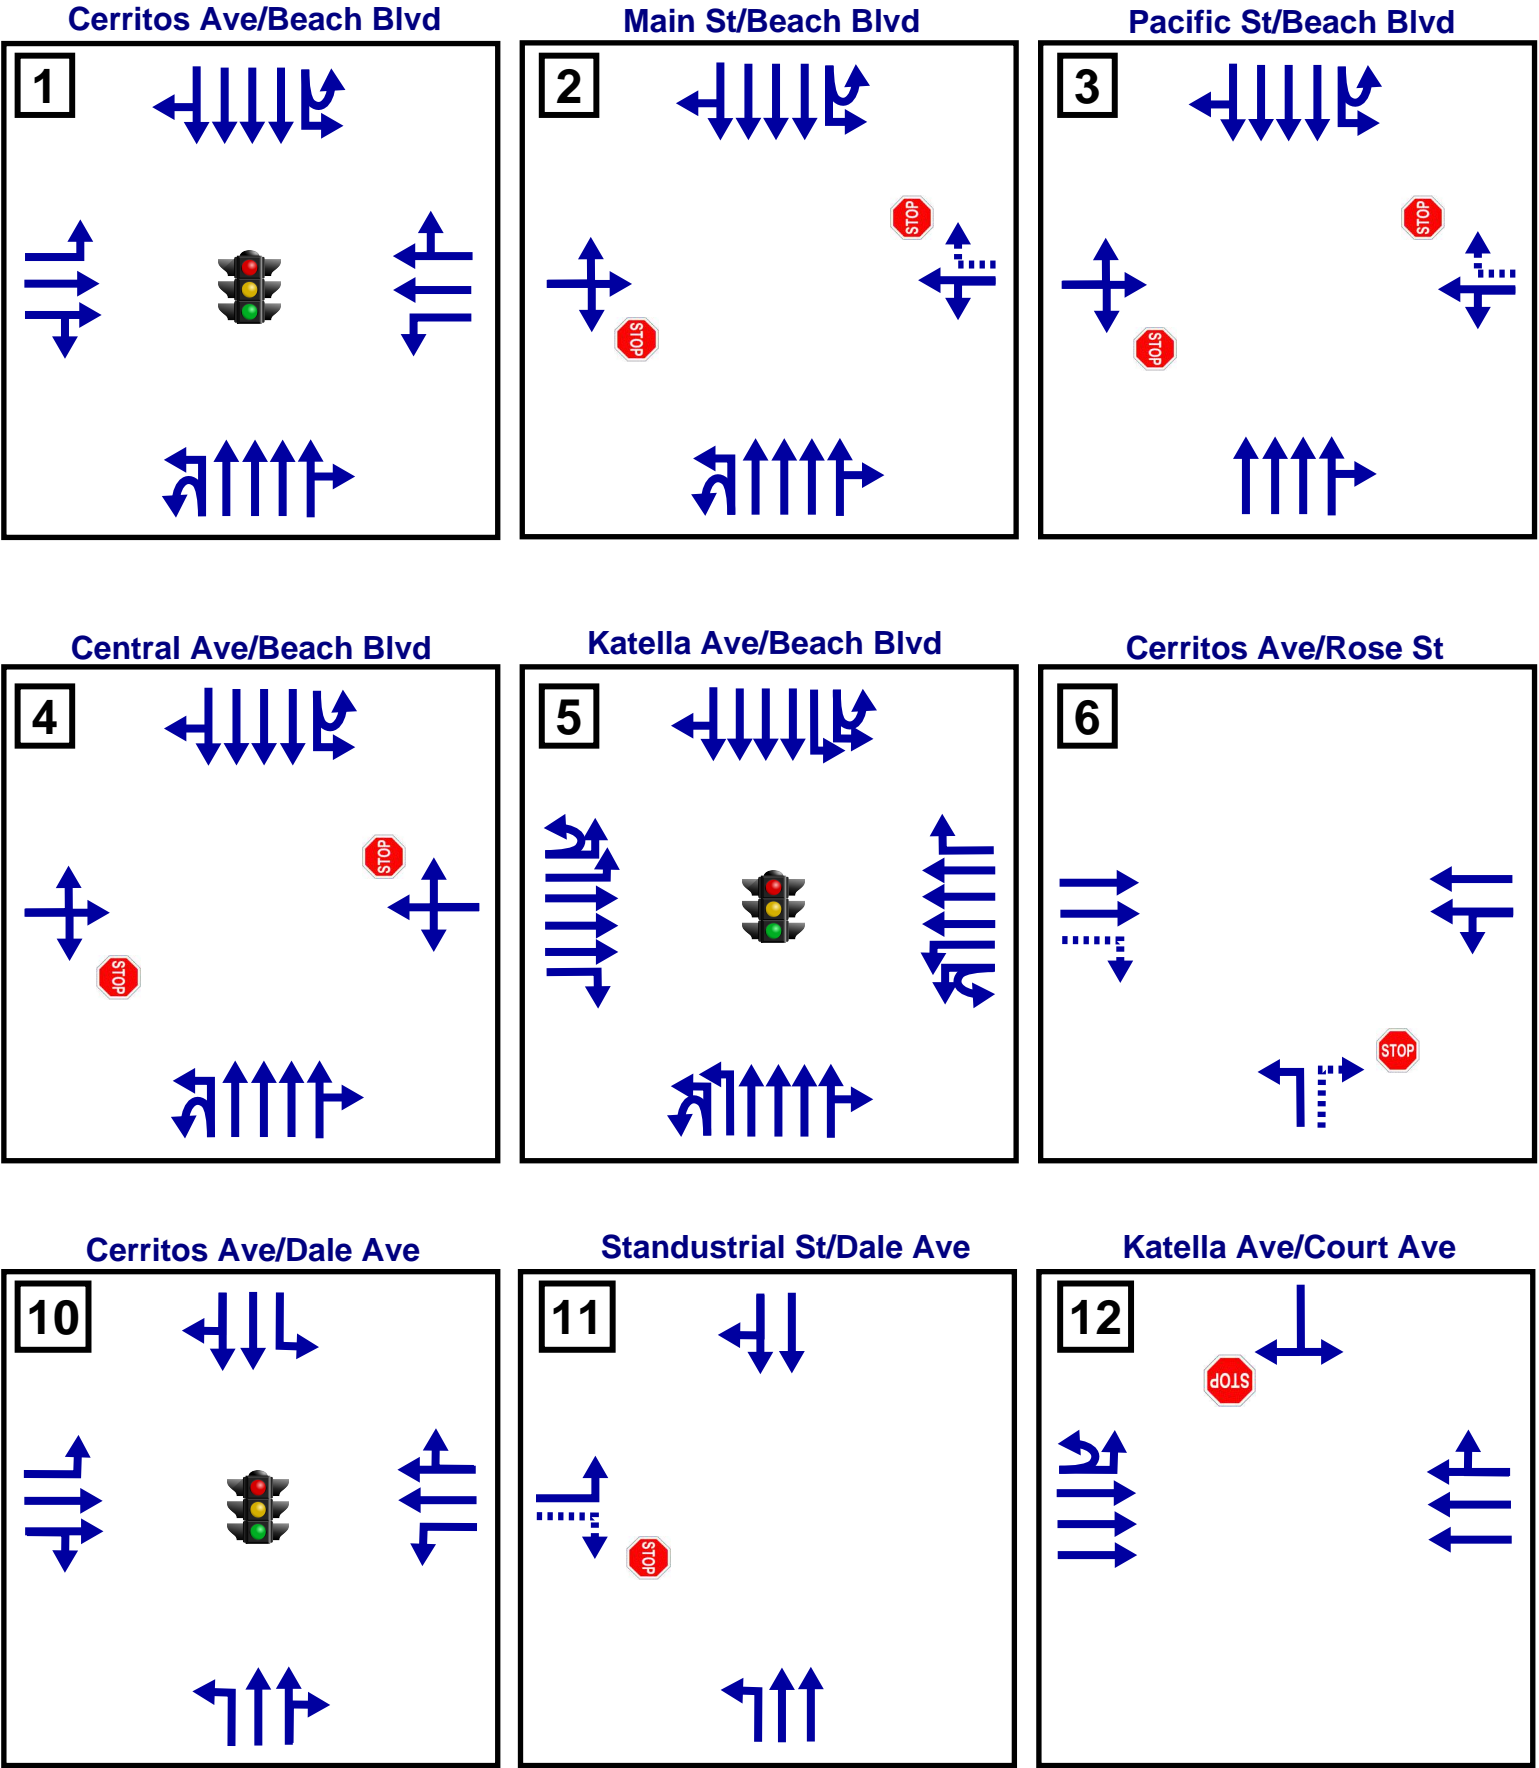

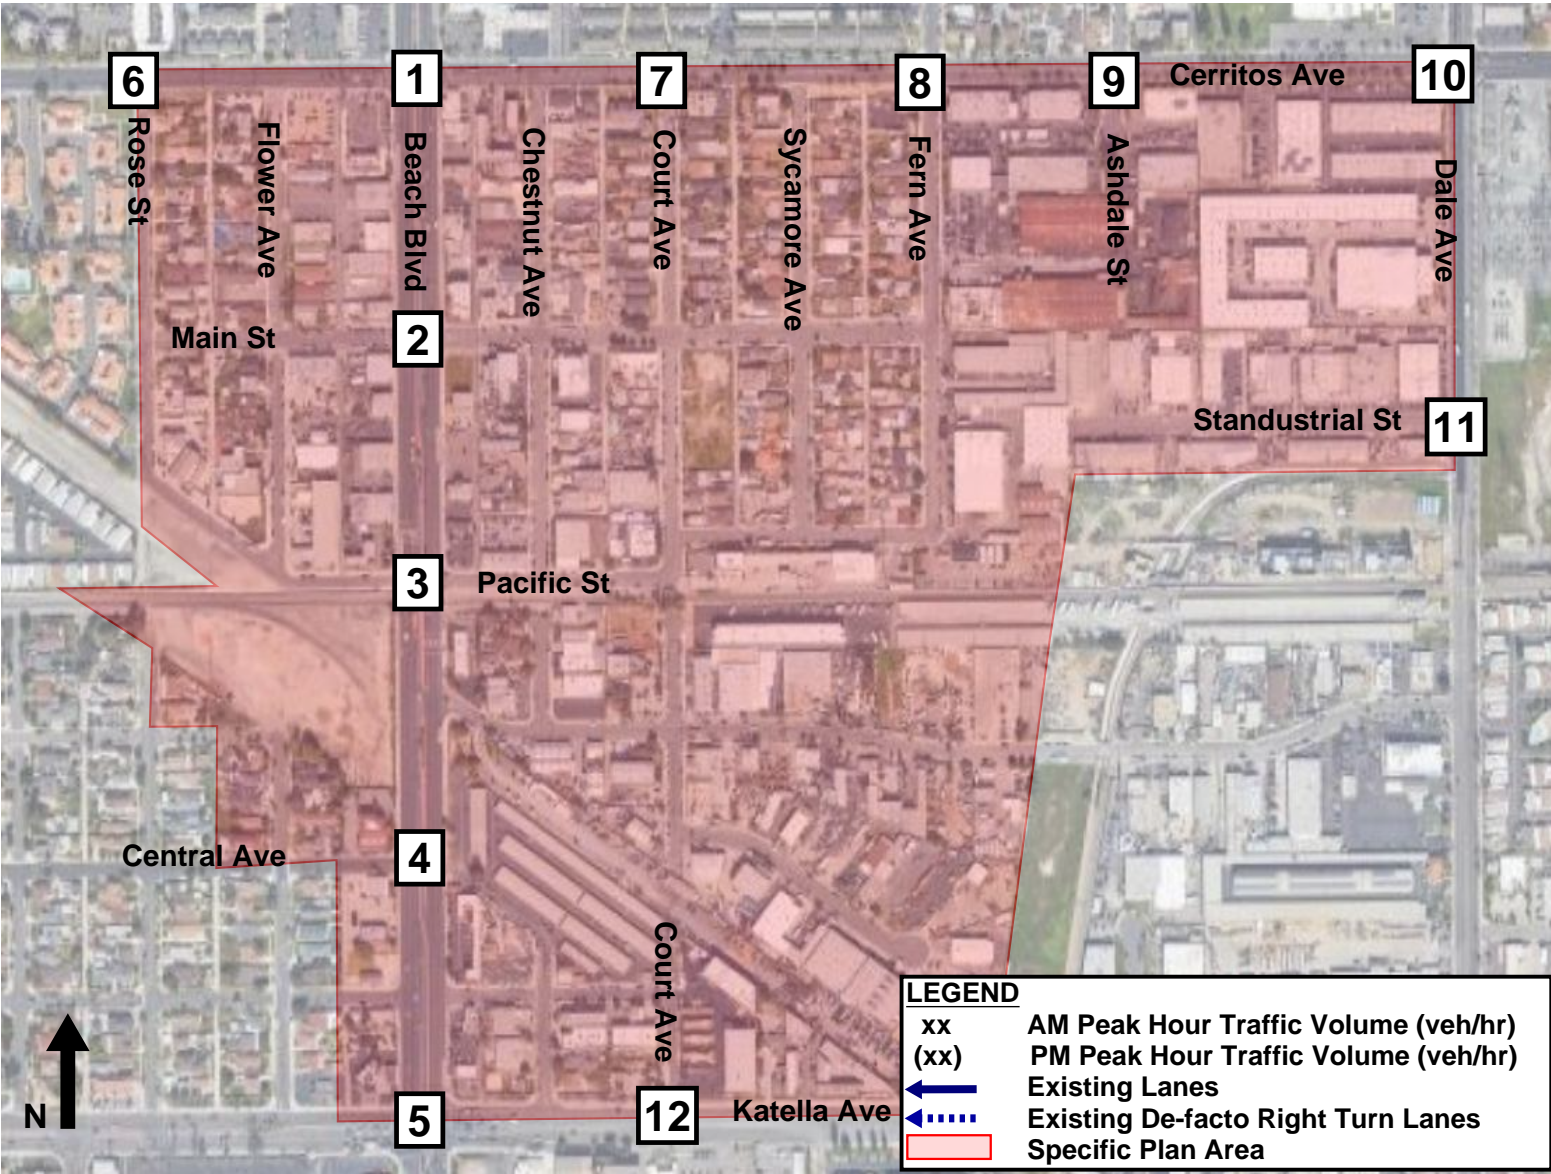

1. Cerritos Avenue and Beach Boulevard
2. Main Street and Beach Boulevard
3. Pacific Street and Beach Boulevard
4. Central Avenue and Beach Boulevard
5. Katella Avenue and Beach Boulevard
6. Cerritos Avenue and Rose Street
7. Cerritos Avenue and Court Avenue
8. Cerritos Avenue and Fern Avenue
9. Cerritos Avenue and Ashdale Street
10. Cerritos Avenue and Dale Avenue
11. Standustrial Street and Dale Avenue
12. Katella Avenue and Court Avenue

Figure 2 and 3 shows the Specific Plan area location and the study intersections, respectively. Figure 4 shows the existing lane geometry at each study intersection.

Figure 2. Project Location

1.2. ANALYSIS METHODOLOGY

Because the environmental documentation is tiering off the General Plan Environmental Impact Report, the analysis in this report includes analysis of Level of Service (LOS) for the study intersections to determine whether the additional units exacerbate the previously disclosed LOS impact. Level of Service (LOS) is the typical measure used to characterize the quality of traffic operations at an intersection or roadway segment. LOS A represents relatively free operating conditions, whereas LOS F has unstable flow and congestion with volumes at or near the capacity of the facility. Excessive delays and queues can occur when the LOS is not acceptable. Table 1 provides descriptions and thresholds for LOS A through LOS F for each intersection evaluation methodology used in this report.

Table 1. Intersection Level of Service Definitions

Level of Service	Description	Intersection Volume to Capacity (V/C) Ratio/ICU Value	Signalized Intersection Delay (sec/veh)	Unsignalized Intersection Delay (sec/veh)
A	Primarily free-flow operation	0.000 - 0.600	≤10	≤10
B	Reasonably unimpeded operation	>0.600 - 0.700	>10 and ≤20	>10 and ≤15
C	Stable operation	>0.700 - 0.800	>20 and ≤35	>15 and ≤25
D	Less than stable conditions - small increases in flow may cause substantial increases in delay	>0.800 - 0.900	>35 and ≤55	>25 and ≤35
E	Unstable operation and significant delay	>0.900 - 1.000	>55 and ≤80	>35 and ≤50
F	Congested conditions, including flow at extremely low speed	>1.000	>80	>50

The traffic generated by the project or by the project in combination with other projects in the area could worsen the LOS of a facility. To assess the potential traffic impacts due to the background traffic growth and completion of existing and future projects, the following scenarios were evaluated:

- Existing Conditions
- Existing Plus Project Conditions
- 2050 Cumulative Developments Conditions
- 2050 Cumulative Developments Plus Project Conditions

The City of Stanton does not have published guidelines for analyzing the impacts to intersections. Therefore, this TIS follows the *2021 Orange County Transportation Authority (OCTA) Congestion Management Program Report (CMP)*¹, which applies the Intersection Capacity Utilization (ICU) methodology at signalized intersections and the Highway Capacity Manual (HCM) methodology at unsignalized intersections. The methodologies and significance thresholds are discussed further in the following sections.

1.2.1. Intersection Capacity Utilization (ICU)

The ICU methodology is used to determine the operating LOS of signalized intersections. This methodology requires the calculation of the intersection volume/capacity (V/C) ratio, which is the summation of critical lane group flow ratios with a yellow clearance adjustment. The LOS estimated by the ICU methodology is directly related to the intersection V/C ratio. A lost time factor of 0.05 should be included in the calculations.

To determine whether the addition of project-generated trips at a signalized study intersection results in a significant impact, the City of Stanton has established the following threshold of significance consistent with the CMP: A significant impact occurs when a proposed project increases traffic demand at a signalized study intersection operating at a deficient LOS (LOS F) by one percent or more of capacity ($V/C \geq 0.01$), worsening LOS F ($V/C > 1.00$).

1.2.2. Highway Capacity Manual (HCM)

This study applied the *HCM*² methodology to evaluate unsignalized intersections, which defines LOS based on delay. The analyses for the unsignalized intersections were conducted using the software *Synchro* and *SimTraffic*. The City of Stanton has not established thresholds of significant impacts for unsignalized intersections.

1.2.3. Vehicle Miles Traveled

The project is also subject to Vehicle Miles Traveled (VMT) evaluation to comply with Senate Bill 743. The County of Orange methodology will be used, starting with the County's screening tool to determine if the project can be screened out and assumed to have a less than significant traffic impact.

2. EXISTING STUDY AREA CONDITIONS

2.1. ROADWAY NETWORK

There are several existing roadways in the project traffic study area, as discussed below:

Rose Street is a discontinuous two-lane undivided roadway oriented in the north-south direction. The roadway terminates northerly at **Cerritos Avenue** and southerly at **Katella Avenue** and is halved by the Union Pacific Railroad. On-street parking is permitted.

Beach Boulevard is an eight-lane divided roadway, which serves as a State Route (SR-39). The roadway is classified as an 8-lane Smart Street in the *2022 Master Plan of Arterial Highways* by Orange County, California³ and has a posted speed limit of 45 mph. On-street parking is prohibited in the study area.

Court Avenue is a two lane, undivided roadway. Court Avenue terminates northerly at Cerritos Avenue and southerly at Katella Avenue and is discontinuous at the Union Pacific Railroad and Union Pacific Corridors. On-street parking is permitted.

Fern Avenue is a two lane, undivided roadway with a posted speed limit of 25 mph in the Specific Plan area. On-street parking is permitted.

Ashdale Street is a two lane, undivided roadway in a residential area which ends in a cul-de-sac approximately 500 feet north of Cerritos Avenue and 150 feet south of Cerritos Avenue. On-street parking is permitted.

Dale Avenue is a four lane roadway with a two-way left turn lane in the study area. The roadway in the study area is classified as a secondary arterial by Orange County. The posted speed limit is 40 mph and on-street parking is prohibited between Cerritos Avenue and Katella Avenue.

Cerritos Road is a four lane, undivided roadway west of Beach Boulevard and becomes a four lane divided roadway with segments of raised medians east of Beach Boulevard.

The roadway in the study area is classified as a secondary arterial by Orange County. The posted speed limit is generally 40 mph in the study area. On-street parking is prohibited.

Main Street is a two lane, undivided roadway oriented in the east-west direction. Main Street terminates on the west at Rose Street and on the east at Fern Avenue. On-street parking is permitted.

Pacific Street is also a two lane, undivided roadway. The roadway terminates on the west at Rose Street and on the east at Fern Avenue, trending in an east-west direction generally along the Pacific Union Pacific Railroad. On-street parking is permitted.

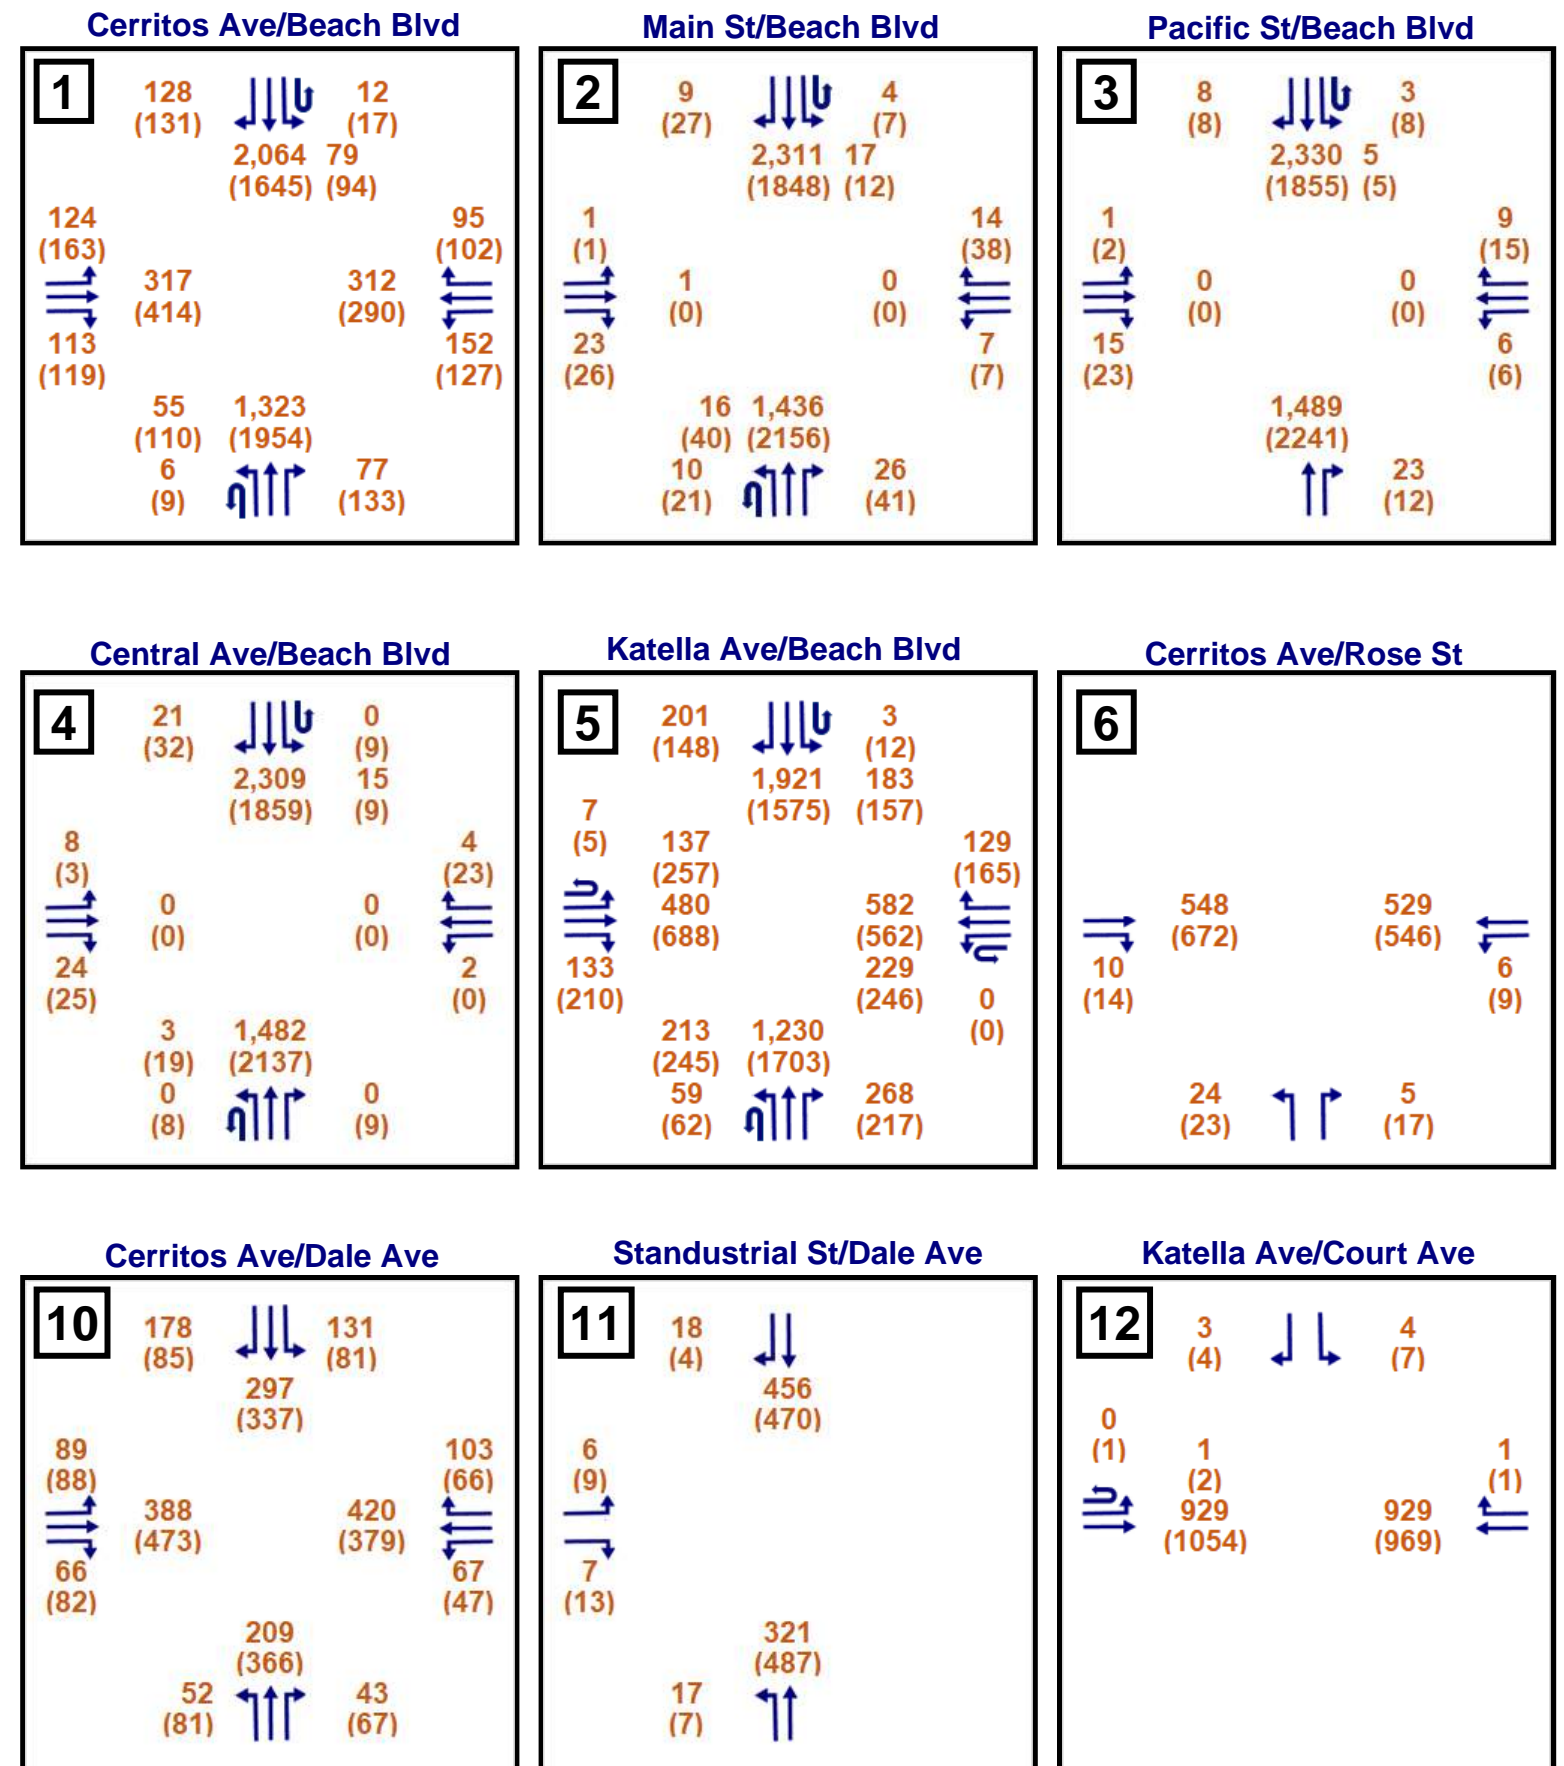

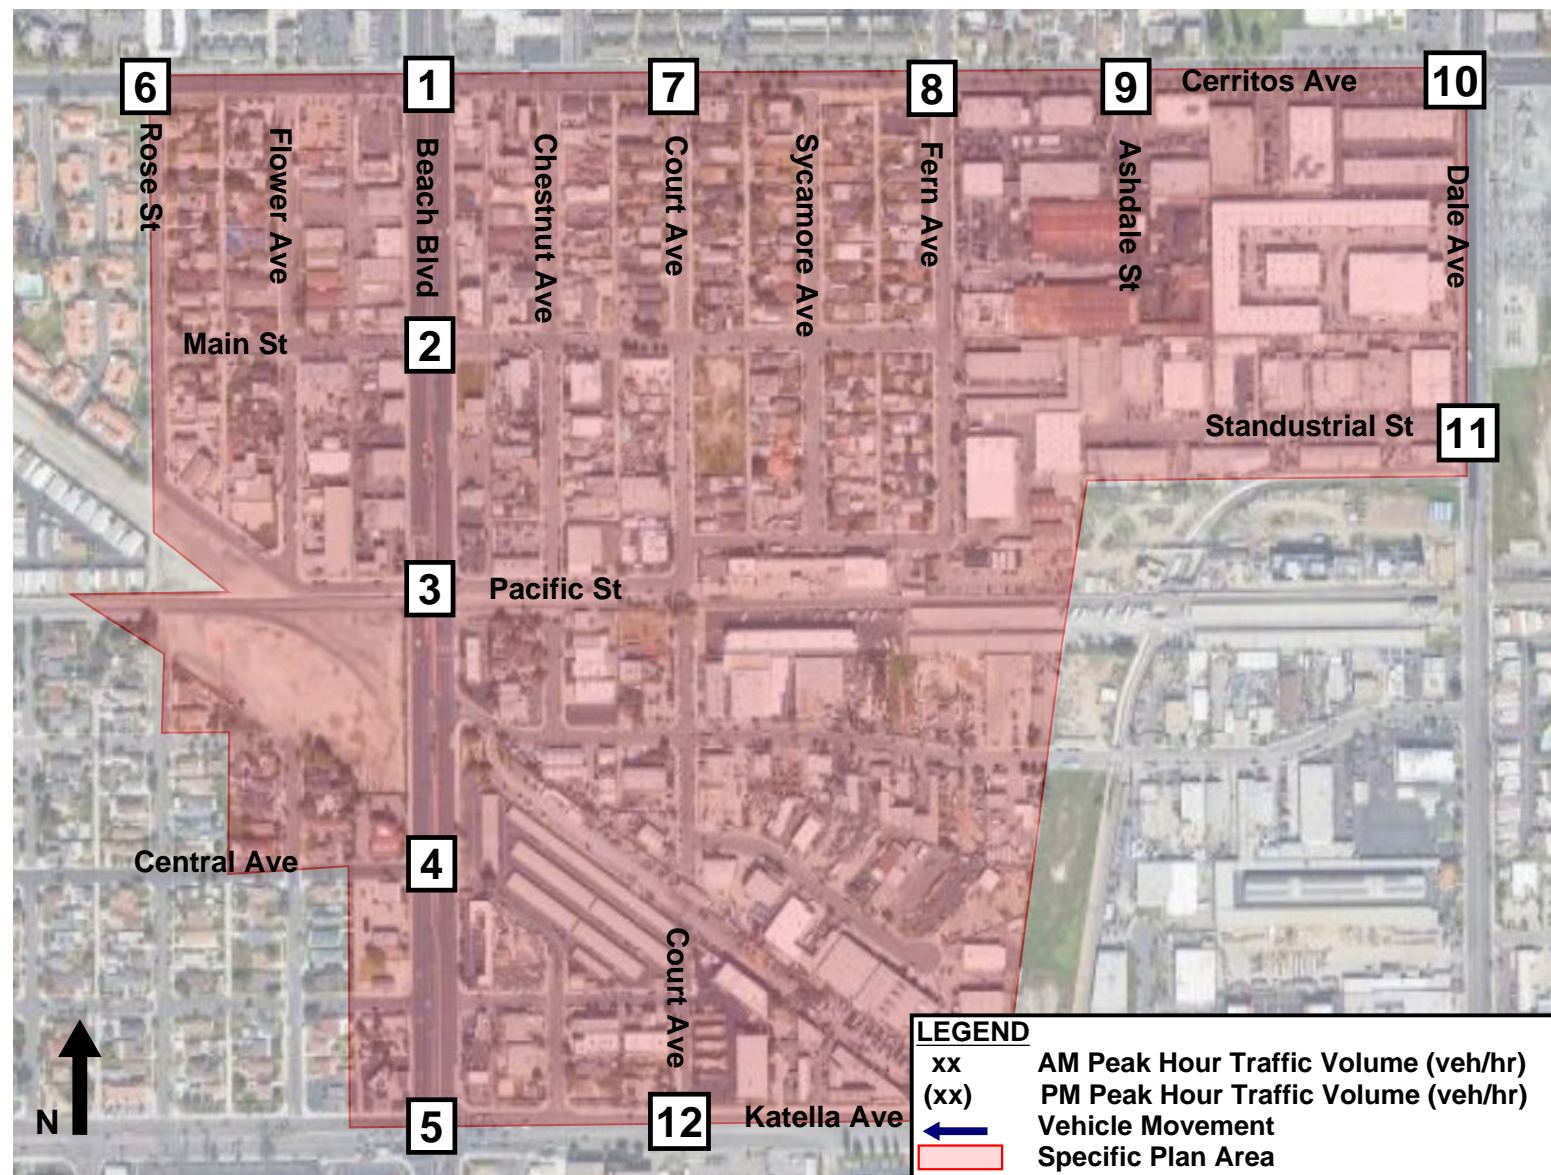

Central Avenue is a two lane, undivided roadway trending in an east-west direction. The roadway becomes Grand Avenue east of Beach Boulevard. On-street parking is permitted.

Standustrial Street is a two lane, undivided roadway in an industrial area. The roadway is approximately 950 feet long west of Dale Avenue and serves a number of businesses along both sides of its frontage. Although on-street parking is not specifically permitted, portions of the roadway are sometimes used for parking.

Katella Road is a six lane, divided roadway with a posted speed limit of 40 mph west of Beach Boulevard in the study area. East of Beach Boulevard through Dale Avenue, the roadway becomes a six-lane roadway with a two-way left turn lane with a posted speed limit of 45 mph. The roadway is classified as a 6-lane Smart Street by Orange County. On-street parking is prohibited.

2.2. TRAFFIC VOLUMES

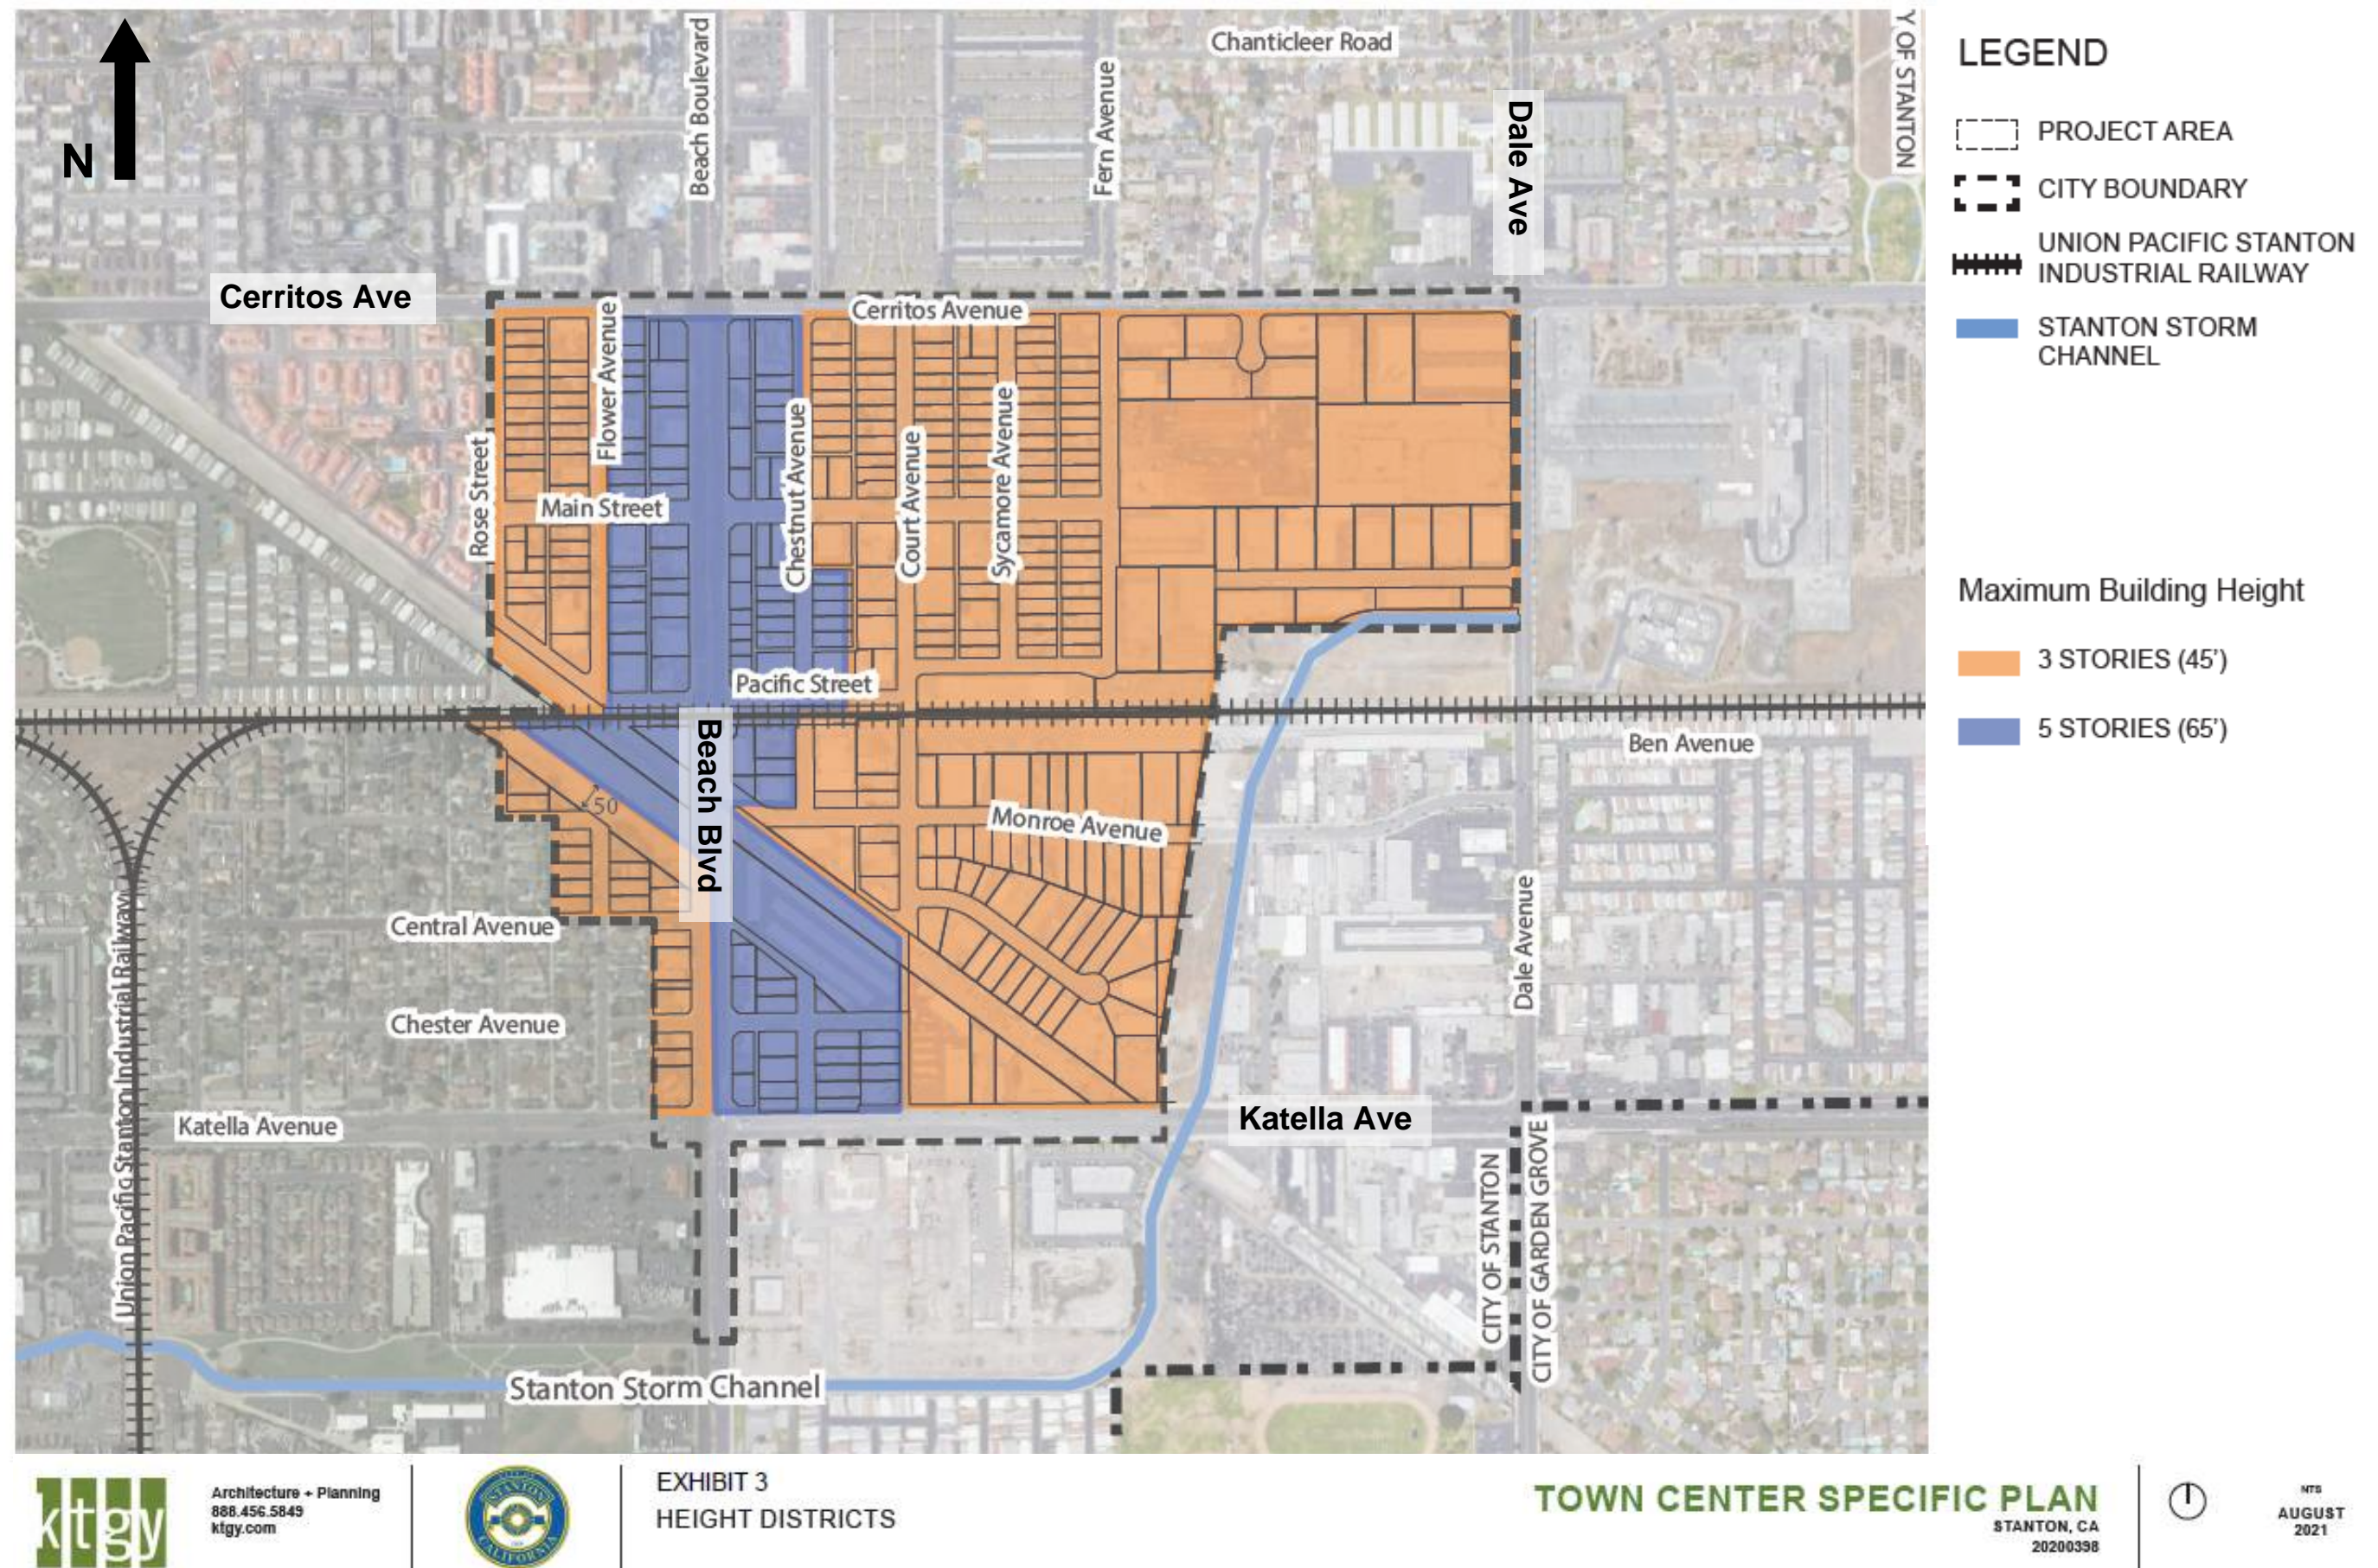

Traffic volume data was collected at the 12 study intersections in February 2022 from 7:00 AM to 9:00 AM and from 4:00 PM to 6:00 PM. The overall peak hours for the study area were found to be from 7:30 to 8:30 AM and from 4:45 to 5:45 PM. Figure 5 shows the existing traffic volumes. All collected traffic volume data is included in Appendix A.

3. PROPOSED PROJECT

The Town Center Specific Plan, which is comprised of 156.9 acres, is currently defined as Town Center Mixed-Use, High-Density Residential, Medium-Density Residential, Industrial, and Public/Institutional. The project is designated to revitalize and transform the Beach Boulevard Corridor into a mixed-use and pedestrian-friendly district while preserving the existing residential neighborhood. The intersections of Cerritos Avenue/Beach Boulevard and Katella Avenue/Beach Boulevard are expected to be developed as gateways to the area and are expected to include outdoor plazas and streetscape along Beach Boulevard.

Main Street is expected to be extended easterly and rebuilt as a retail-oriented mixed-used area. An industrial mixed-use district in the southern portion of the Specific Plan is anticipated to include search and development (R&D), light industrial, restaurants and other compatible uses. New height restrictions will be included in the area, including a 5-story height district concentrated along Beach Boulevard and a 3-story height district located around the existing single-family neighborhoods and in the northeastern portion of the Specific Plan area. The height restrictions are shown in Figure 6.

4. PROJECTED TRAFFIC VOLUMES

4.1. PROJECT AREA VOLUMES

4.1.1. Existing Project Trip Generation

The existing project trip generation for the project was estimated using the *ITE Trip Generation Manual, 11th Edition*⁴. Trip generation rates of the retail and industrial land uses were using the average of multiple retail and industrial land uses, respectively, which represent the mix of existing uses in the project area, as shown in Table 2. Based on the assumptions, the 156.9-acre Specific Plan area generates approximately 9,113 daily trips in the existing year due to the project, including 692 trips in the AM peak hour and 1,031 trips in the PM peak hour.

4.1.2. Project Trip Distribution

Based on the location of the Stanton Town Center and distribution of regional access to the area, it is estimated that approximately 5% of traffic would access the site to/from the west and 15% of traffic to/from the east via Cerritos Avenue, 5% to/from the west and 15% to/from the east via Katella Avenue, and 30% to/from the north and 30% to/from the south via Beach Boulevard. Figure 7 shows the assumed external trip distribution for the Stanton Town Center.

4.1.3. Proposed Project Trip Generation

The proposed project trip generation for the project was also based on the ITE Trip Generation Manual, 11th Edition. A similar variety of retail and industrial uses were used to estimate the trip generation for the project area, but the breakdown was updated to better represent anticipated future conditions. Table 3 shows that the proposed project is expected to generate 23,705 daily trips in the buildout year, including 1,845 trips in the AM peak hour and 2,278 trips in the PM peak hour.

While the Specific Plan area would increase in the number of residential multifamily units, retail/commercial area, and light industrial uses through new development and redevelopment, it should be noted that this IS/MND analyzes the potential impacts of the additional 139 multifamily dwelling units only.

Table 2. Existing Trip Generation

**Assumes combination of industrial park (LU 130) and warehousing (LU 150) to account for variety of uses in industrial areas

The existing General Plan for the City of Stanton allows for a total of 1,399 multifamily units within the Town Center Specific Plan area. Since 2008, 4 multifamily units have been built, resulting in a remaining capacity of 1,395 units. The Town Center Specific Plan would allow for an additional 139 multifamily units, increasing the remaining capacity to 1,534 multifamily units. Table 4 shows the trip generation for the additional 139 multifamily units only.

PM Peak	0.51	71	63%	37%	45	26
Daily	6.74	937	50%	50%	468	468

4.1.4. Project Traffic Volumes

Using the project trip generation and trip distribution, the estimated existing and future project traffic volumes at each of the study intersections were calculated and are shown in Figures 8 and 9, respectively.

4.2. EXISTING YEAR (2022)

4.2.1. Existing Plus Project Traffic Volumes

The Existing Plus Project traffic volumes were estimated by first removing the estimated existing project traffic volumes from the existing peak hour traffic volumes then adding the total proposed project traffic volumes, as shown in Figure 10. The Existing Plus Project analysis is included in this report because the project is long term and has no set opening year.

4.3. BUILDOUT YEAR (2050)

4.3.1. Background Growth

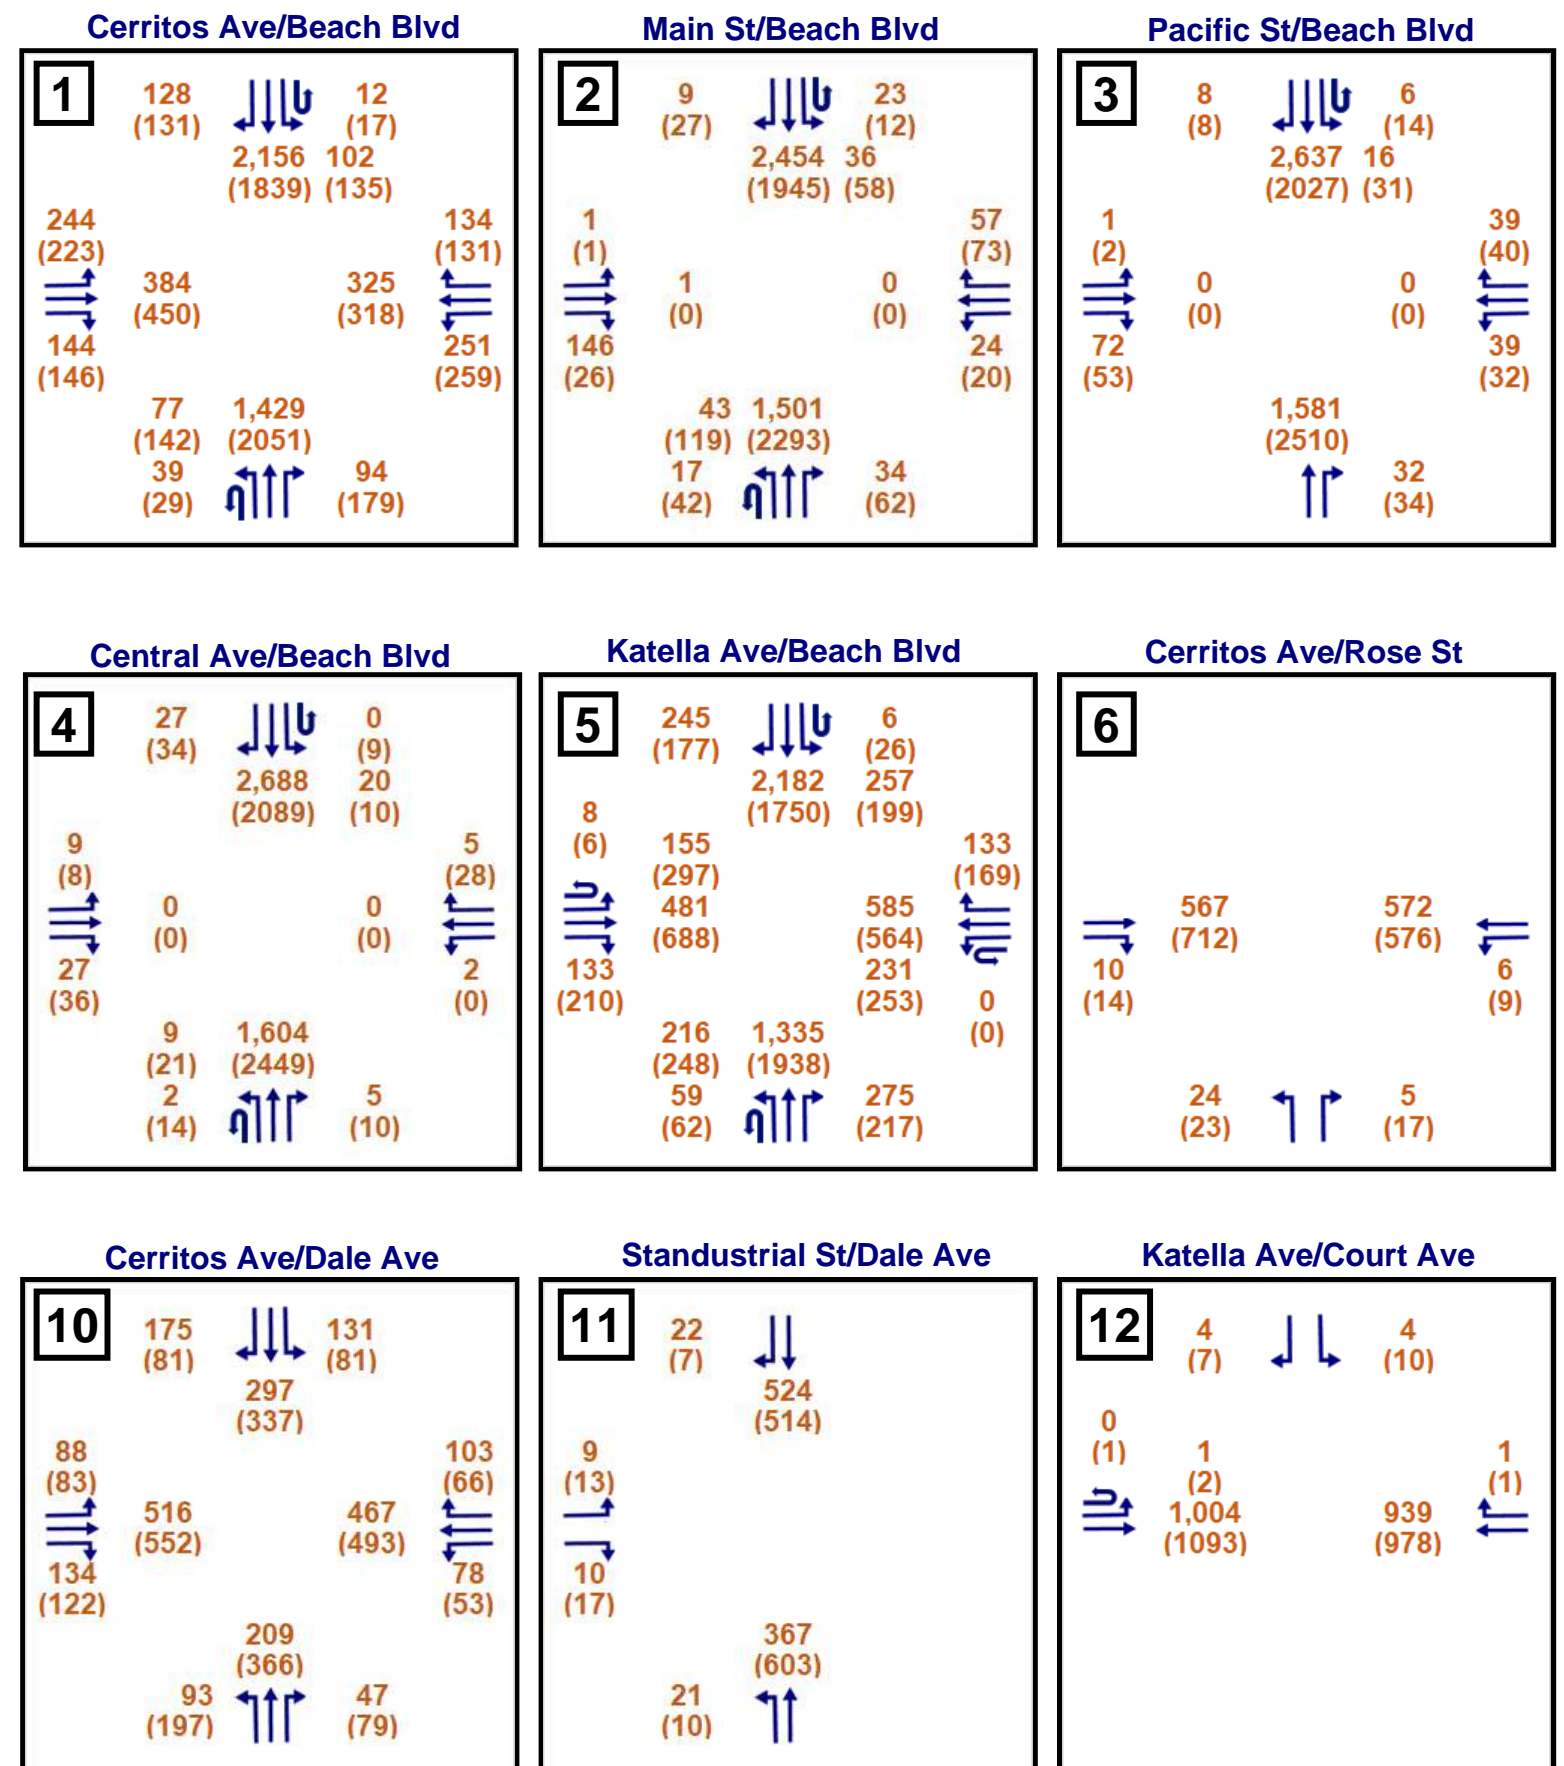

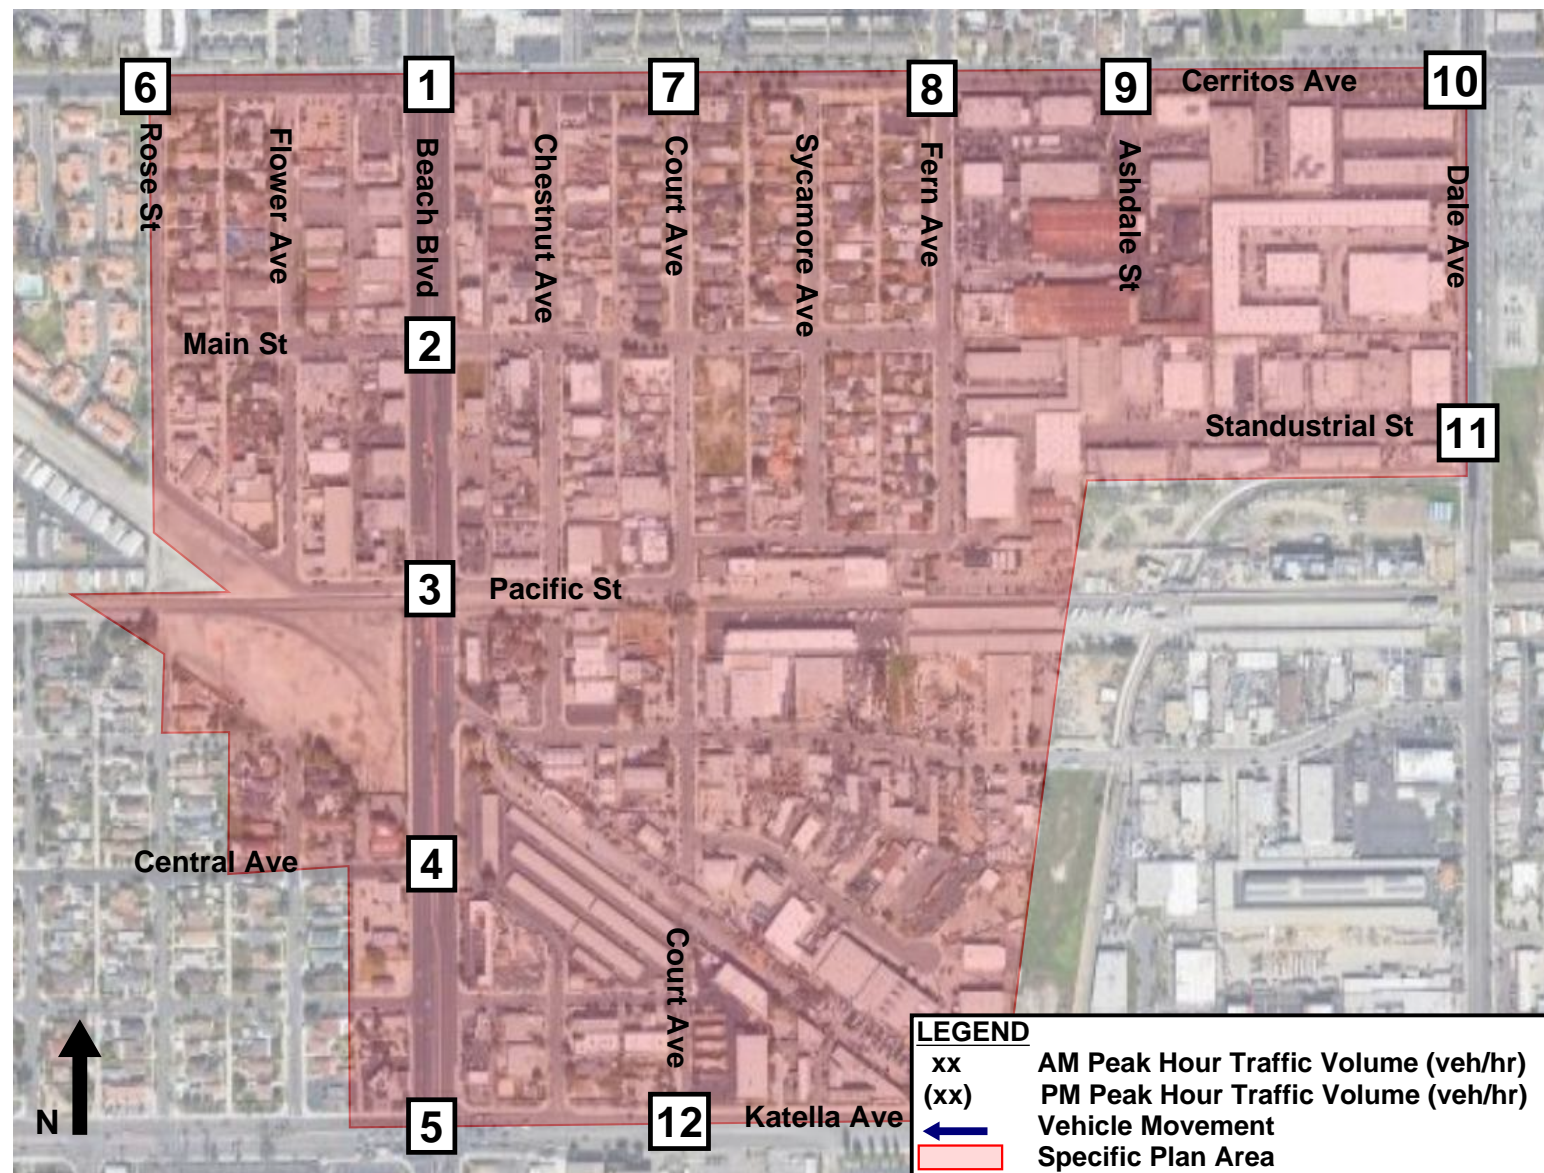

The Traffic and Circulation section of the 2008 *General Plan Update Environmental Impact Report*⁵ indicated that there would be little to no growth in the project area. Therefore, to be conservative, a 0.5% per year growth was used to calculate background growth for all the study intersections.

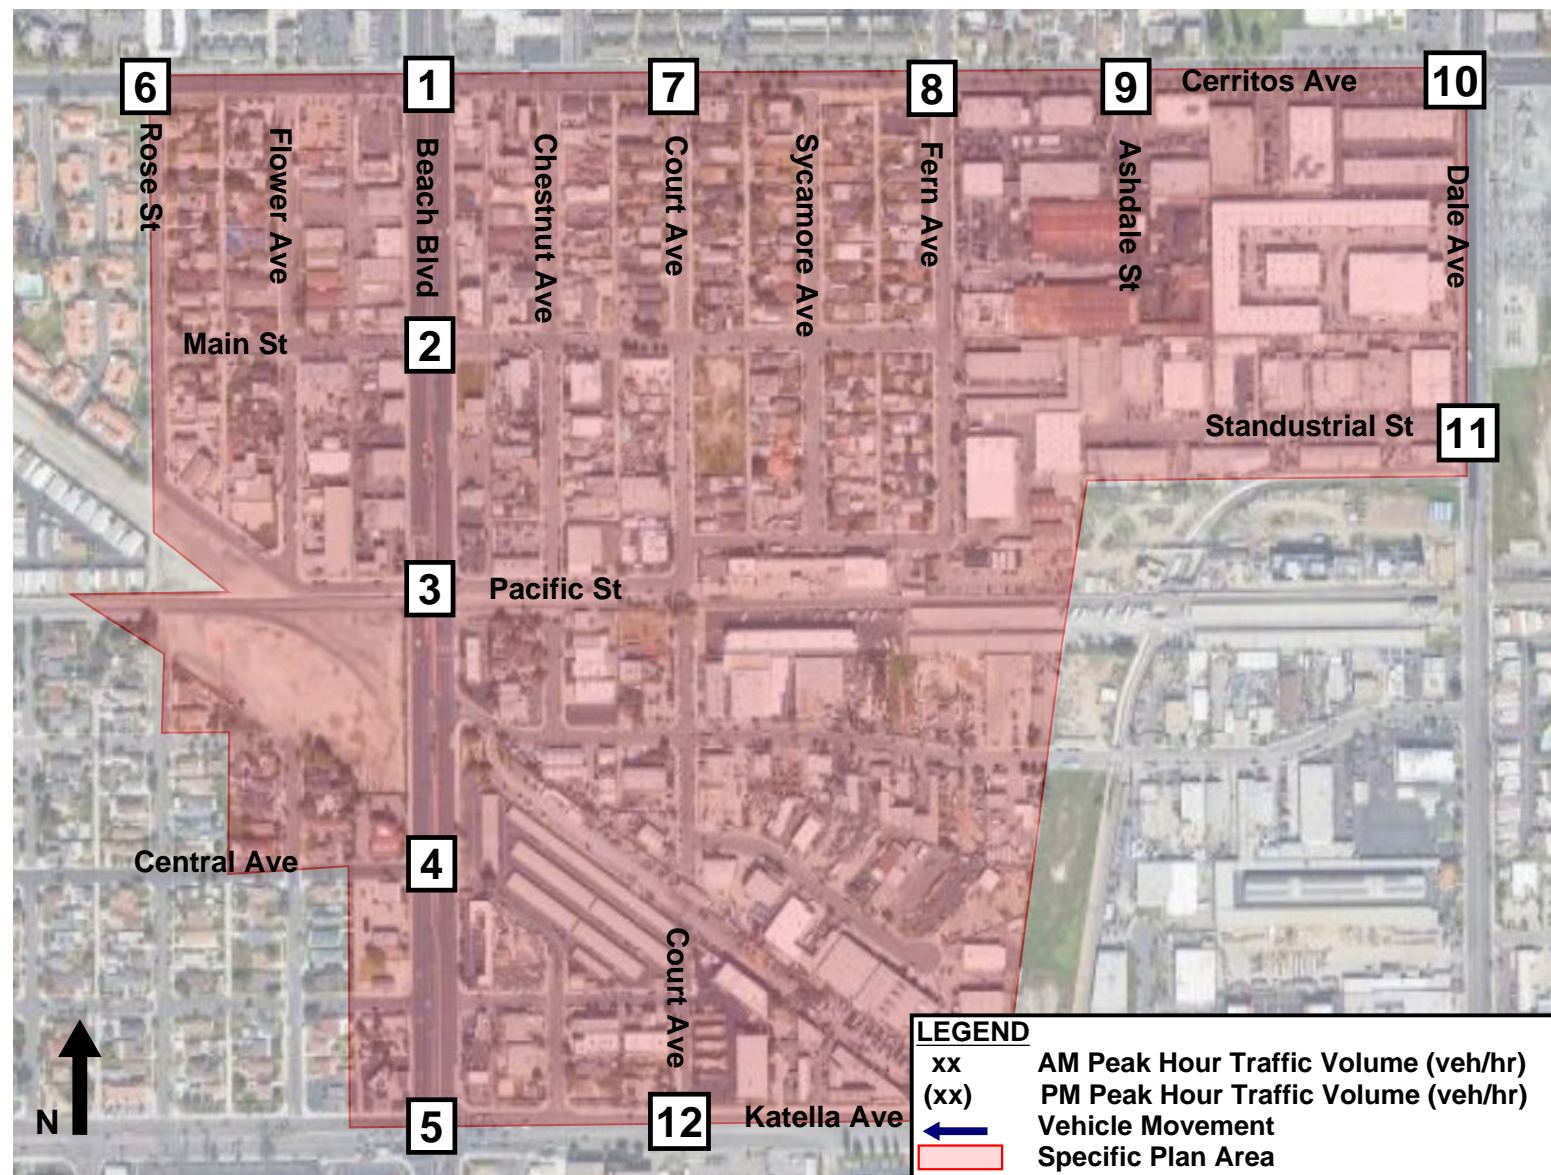

4.3.2. Buildout Year Traffic Volumes

The buildout year traffic volumes are the anticipated traffic volumes in 2050 without the project, which include the existing project-area traffic volumes. The 0.5% annual growth rate was applied to the existing traffic volumes to estimate buildout year volumes without the project. Figures 11 shows the 2050 cumulative traffic volumes.

4.3.3. Buildout Year Plus Project Traffic Volumes

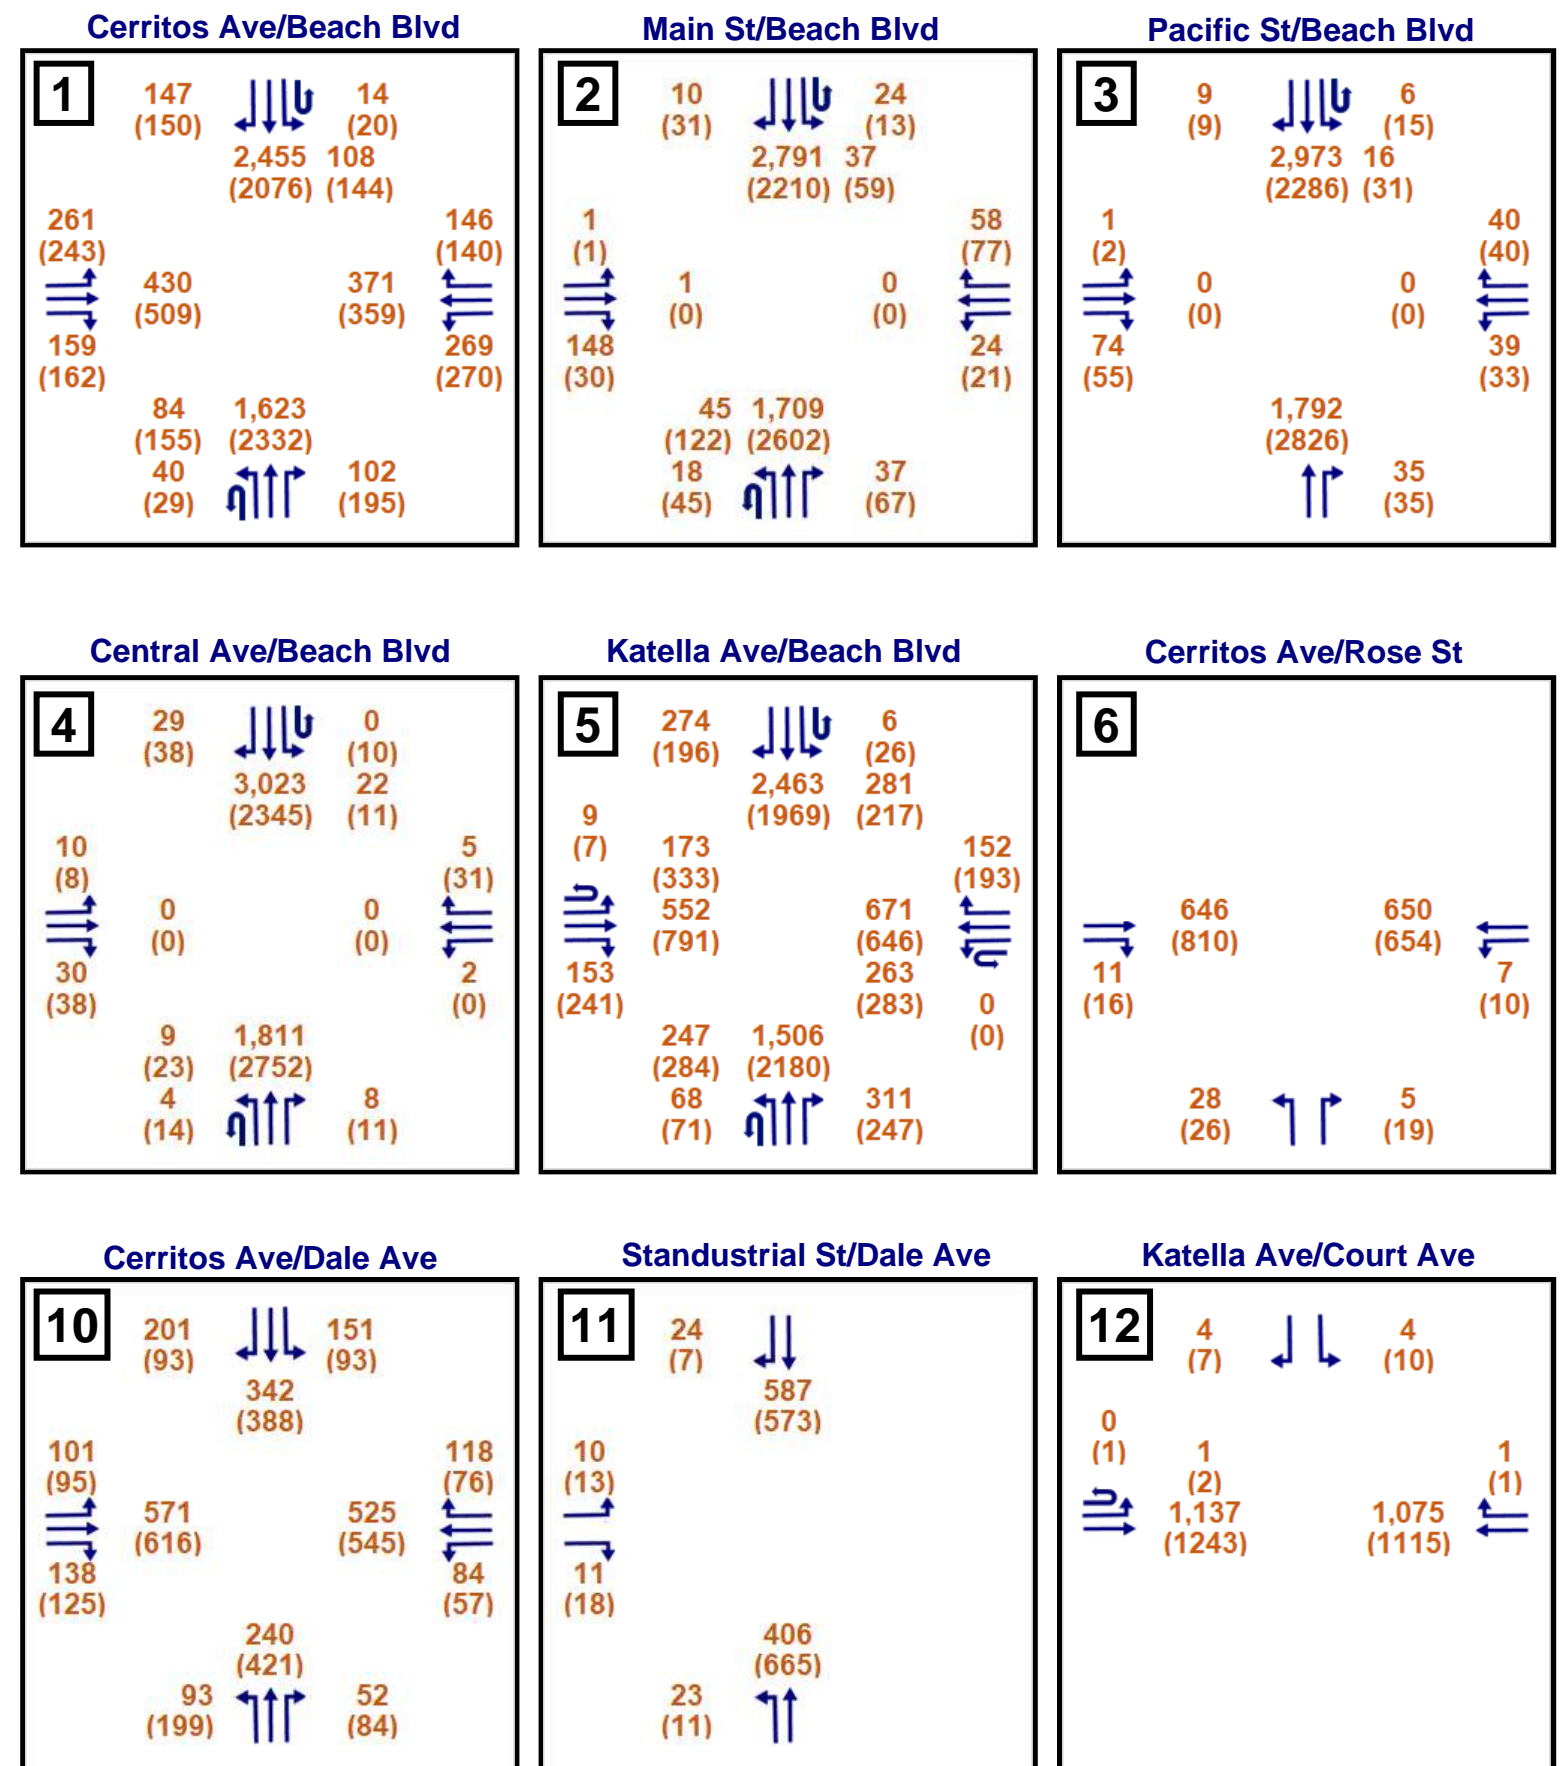

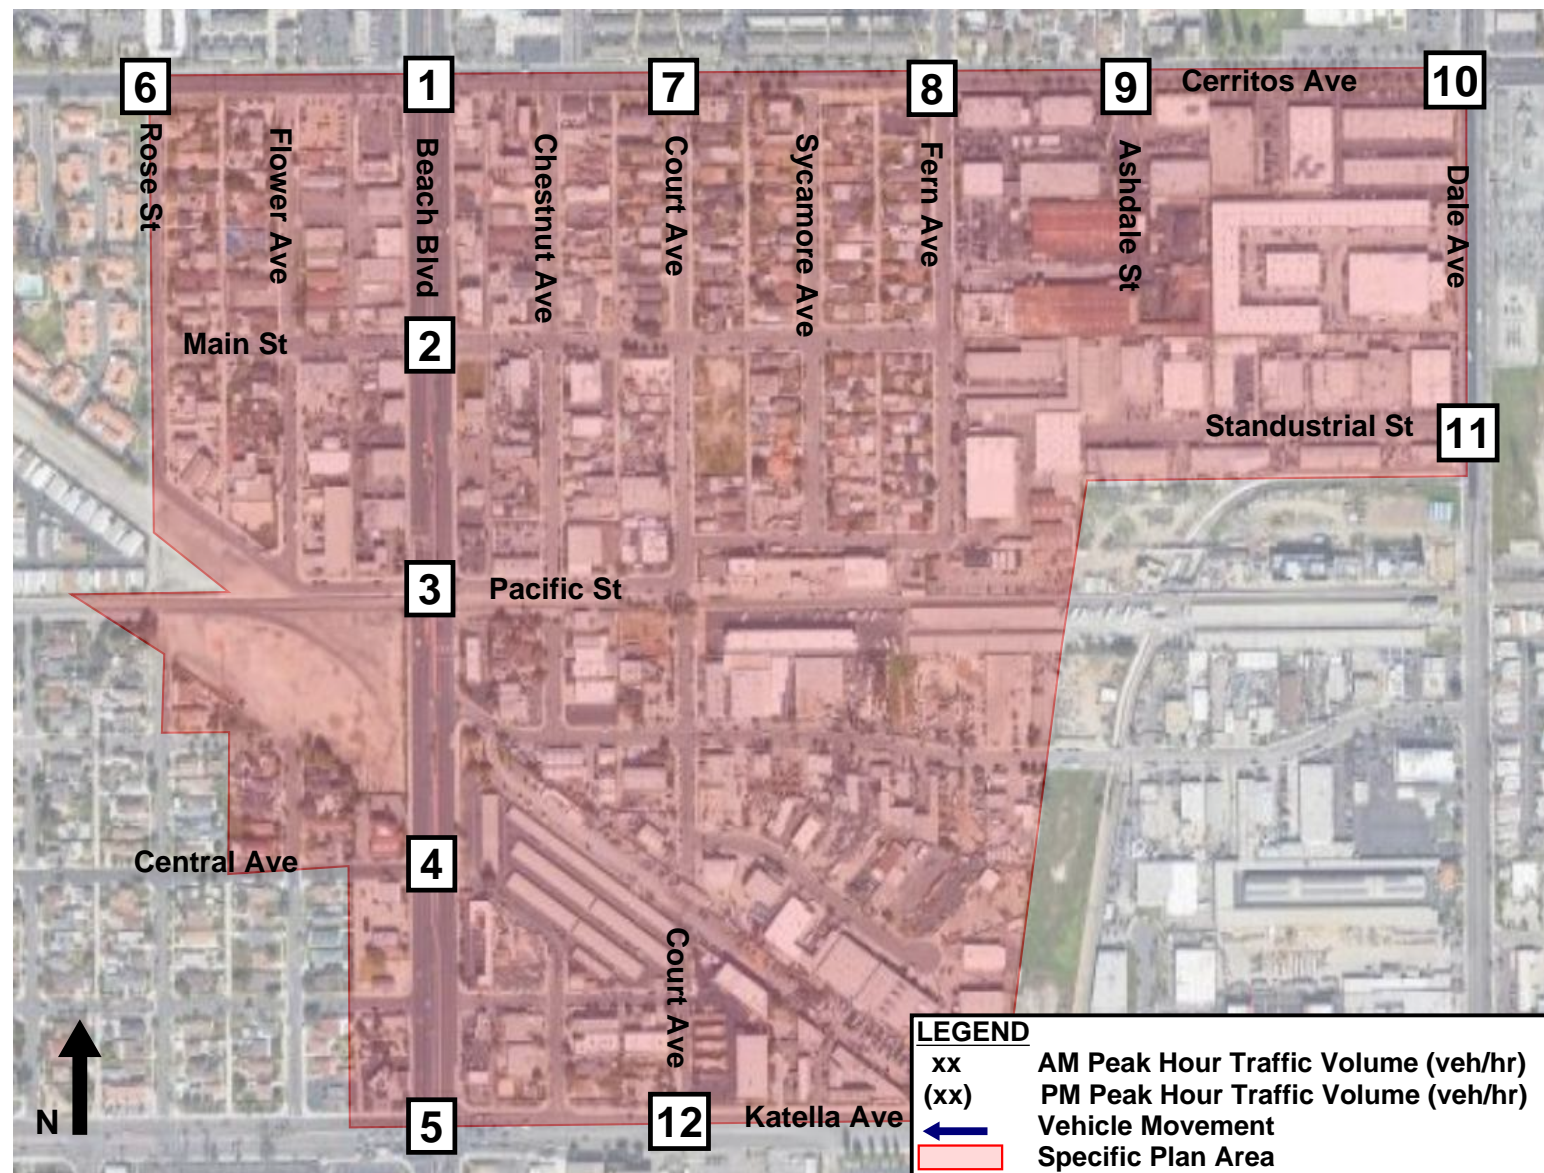

Figure 12 shows the cumulative plus project traffic volumes in 2050 at each of the study intersections.

5. OPERATIONAL ANALYSIS – EXISTING YEAR (2022)

5.1. EXISTING CONDITIONS

As previously discussed, the signalized intersections were evaluated using the ICU methodology. Most of the unsignalized intersections were analyzed using the HCM methodology in *Synchro*, but the unsignalized intersections on Beach Boulevard were evaluated via *SimTraffic* because the HCM methodology cannot be applied to intersections with more than three through lanes on the major approach. For existing conditions, the ICU spreadsheets and HCM reports are included in Appendix B.

Table 5 in Section 5.3 shows the resulting LOS for each of the study intersections under existing conditions. As seen in the table, the three signalized intersections currently operate at LOS B or better in both peak hours.

In addition, the worst minor-street (stop controlled) movement at the intersections of Main Street and Beach Boulevard (#2), Pacific Street and Beach Boulevard (#3), and Central Street and Beach Boulevard (#4), operate at LOS F in both peak hours. However, in *SimTraffic* simulations, vehicles are not able to make two-stage left turns at unsignalized divided highway intersections. Therefore, the delays may be lower in reality if drivers make two-stage left-turns at unsignalized intersections on Beach Boulevard.

5.2. EXISTING PLUS PROJECT CONDITIONS

The same approach was used to evaluate existing conditions plus the project; the full buildout (2050) version of the project was assumed in this analysis. Recall that this analysis is serving as the opening year analysis in this report.

The ICU and HCM reports for existing conditions plus project are included in Appendix C. The resulting level of service for each of the study intersections for existing plus project conditions is also shown in Table 5 in Section 5.3.

As shown in the table, the signalized intersections will continue to operate at LOS D or better with the project. The worst minor-street movement will operate at LOS F at four intersections, including the three which will operate at LOS F under existing conditions and the intersection of Cerritos Avenue and Fern Avenue which would deteriorate from LOS C to LOS F in the PM peak hour with the project. In addition, the intersection of Cerritos Avenue and Ashdale Street will operate at LOS E in the PM peak hour with the project.

5.3. EXISTING PLUS PROJECT IMPACT EVALUATION

Table 5 shows the LOS for existing and existing plus project conditions for all study intersections as well as the increase in V/C for the signalized intersections. Recall that a significant impact occurs when a proposed project increases traffic demand at a signalized study intersection operating at a deficient LOS (LOS F) by one percent or more of capacity ($V/C \geq 0.01$), worsening LOS F ($V/C > 1.00$). As shown in the Table 5, none of the signalized intersections would have a significant impact for the existing plus project condition. In addition, because there are no operational thresholds for unsignalized intersections, no improvements are needed at those locations.

Table 4. Existing Plus Project Impact Analysis

Intersection		Intersection Control	Existing						Existing + Project						Increase in V/C or Delay(s)		Significant Impact?	
			AM Peak Hour			PM Peak Hour			AM Peak Hour			PM Peak Hour			AM	PM	AM	PM
			Delay	V/C	LOS	Delay	V/C	LOS	Delay	V/C	LOS	Delay	V/C	LOS				
1	Cerritos Ave/Beach Blvd	Signalized		0.66	B		0.69	B		0.80	D		0.84	D	0.14	0.15	NO	NO
2	Main St/Beach Blvd	Unsignalized	1818.4*		F	2035.2*		F	2980.8*		F	2836.4*		F			NO	NO

10	Cerritos Ave/Dale Ave	Signalized		0.45	A		0.44	A		0.51	A		0.55	A	0.06	0.11	NO	NO
11	Standustrial St/Dale Ave	Unsignalized	13.0		B	13.5		B	14.1		B	14.5		B			NO	NO
12	Katella Ave/Court Ave	Unsignalized	18.6		C	20.4		C	18.2		C	20.7		C			NO	NO

*Delays may be lower if drivers make two-stage left turns

**Highest lane delay for stop controlled movements at TWSC intersections

***No significant impact because intersection delay is not defined for TWSC

6. OPERATIONAL ANALYSIS – BUILDOUT YEAR (2050)

6.1. 2050 CUMULATIVE CONDITIONS

As previously discussed, the signalized intersections were evaluated using the ICU methodology, and the unsignalized intersections were evaluated using the HCM methodology. The ICU and HCM reports for 2050 cumulative conditions are included in Appendix D, and the level of service for each of the study intersections for the 2050 cumulative conditions is shown in Table 6 in Section 6.3.

As seen in the table, the signalized intersections are expected to operate at LOS D or better for 2050 cumulative conditions without the project in both peak hours.

The worst minor-street (stop controlled) movement at the intersections of Main Street and Beach Boulevard (#2), Pacific Street and Beach Boulevard (#3), and Central Street and Beach Boulevard (#4) are expected to operate at LOS F in both peak hours. In addition, the intersection of Cerritos Avenue and Fern Street is expected to operate at LOS E in the PM peak hour.

6.2. 2050 CUMULATIVE PLUS PROJECT CONDITIONS

For 2050 cumulative plus project conditions, the same approach was used to evaluate the study intersections, assuming full buildout of the project. The ICU and HCM reports for 2050 cumulative plus project conditions are included in Appendix E. Table 6 in Section 6.3 shows the resulting level of service for each of the study intersections for 2050 cumulative plus project conditions.

The signalized intersections are expected to operate at LOS E or better in both peak hours with the project. In addition, the three minor street movements expected to operate at LOS F without the project will continue to operate at LOS F. The Cerritos Avenue/Fern Avenue minor street movement will deteriorate to LOS E in the AM peak hour and LOS F in the PM peak hour, and the Cerritos Avenue/Ashdale Street intersection will deteriorate to LOS E in the PM peak hour.

6.3. 2050 CUMULATIVE PLUS PROJECT SIGNIFICANT IMPACT EVALUATION

The increase in ICU due to the project traffic is shown in Table 6. A significant impact occurs when a proposed project increases traffic demand at a signalized study intersection operating at a deficient LOS (LOS F) by one percent or more of capacity ($V/C \geq 0.01$), worsening LOS F ($V/C > 1.00$). Because the signalized intersections are expected to operate at LOS E or better with the project, the project is not expected to have an impact on operations. In addition, because there are no operational thresholds for unsignalized intersections, no improvements are needed at those locations.

Table 5. 2050 Cumulative Plus Project Impact Analysis

Intersection		Intersection Control	2050 Without Project						2050 Cumulative + Project						Increase in V/C or Delay(s)		Significant Impact?	
			AM Peak Hour			PM Peak Hour			AM Peak Hour			PM Peak Hour			AM	PM	AM	PM
			Delay	V/C	LOS	Delay	V/C	LOS	Delay	V/C	LOS	Delay	V/C	LOS

11	Standustrial St/Dale Ave	Unsignalized	14.0		B	14.5		B	15.0		B	15.5		C			NO	NO
12	Katella Ave/Court Ave	Unsignalized	22.3		C	24.2		C	20.9		C	24.2		C			NO	NO

*Delays may be lower if drivers make two-stage left turns

**Highest lane delay for stop controlled movements at TWSC intersections

***No significant impact because intersection delay is not defined for TWSC

7. VEHICLE MILES TRAVELED

Using the County of Orange screening tool⁶, the entire project area is shown to be located in a transit priority area (TPA). A TPA is defined as “an area within one-half mile of a major transit stop that is existing or planned, if the planned stop is scheduled to be completed within the planning horizon included in a Transportation Improvement Program.” A major transit stop is defined as “a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service of 15 minutes or less during the morning and afternoon peak commute periods.” A TPA corridor is one with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours.

If a project is located in a TPA, it is assumed to have a less than significant transportation impact unless the project is inconsistent with the RTP for the area, has a floor area ratio (FAR) less than 0.75, provides an excessive amount of parking, or reduces the number of affordable units.

The City indicated that although the bus lines on Katella Avenue and Beach Boulevard are considered high quality transit corridors, the current bus schedules do not meet the thresholds. However, because this is a long-term project, future plans for transit should be considered when determining whether a project is located in a TPA. Therefore, the County of Orange screening tool was determined to be appropriate for evaluation, and the preliminary screening indicates that the project would be exempt from a Vehicle Miles Traveled (VMT) analysis.

At this stage of development, the FAR and parking are not completed determined. However, it is estimated that the FAR will be approximately 0.75 for the project area, which meets the requirement for VMT exemption in a TPA. Therefore, it is assumed at this time that the project will result in a less than significant impact on transportation. Future individual development projects within the study area will not necessarily be exempt if they conduct separate VMT screening, but that can be determined at the time of implementation.

8. SUMMARY

This traffic study provided an evaluation of the potential traffic Stanton Town Center Specific Plan. Based on the *ITE Trip Generation Manual, 11th Edition*, the 156.9-acre Specific Plan area is estimated to generate approximately 9,113 daily trips in the existing year, including 692 trips in the AM peak hour and 1,031 trips in the PM peak hour.

Under existing conditions, the three signalized study intersections are operating at LOS B or better in both peak hours. However, the worst minor-street (stop controlled) movement at the following unsignalized intersections are operating at LOS F in both peak hours:

- Main Street and Beach Boulevard
- Pacific Street and Beach Boulevard
- Central Street and Beach Boulevard

However, in *SimTraffic* simulations, vehicles are not able to make two-stage left turns at unsignalized divided highway intersections. Therefore, the delays may be lower in reality if drivers make two-stage left-turns at unsignalized intersections.

Under the existing plus project condition, the signalized intersections will continue to operate at LOS D or better. The worst minor-street movement will operate at LOS F at four intersections, including the three which will operate at LOS F under existing conditions and the intersection of Cerritos Avenue and Fern Avenue which would deteriorate from LOS C to LOS F in the PM peak hour with the project. In addition, the intersection of Cerritos Avenue and Ashdale Street will operate at LOS E in the PM peak hour with the project. None of the signalized intersections are expected to meet the City impact threshold, and there is no operational threshold for unsignalized intersections.

In the buildout year of 2050, the proposed project is expected to generate approximately 23,705 daily trips, including 1,845 trips in the AM peak hour and 2,278 trips in the PM peak hour. The three signalized study intersections are expected to operate at LOS D or better for 2050 cumulative conditions without the project in both peak hours. The worst minor-street movement at the intersection of Cerritos Avenue and Fern Street is expected to operate at LOS E in the PM peak hour.

In addition, the worst minor-street (stop controlled) movement at the following unsignalized intersections are operating at LOS F in both peak hours:

- Main Street and Beach Boulevard
- Pacific Street and Beach Boulevard
- Central Street and Beach Boulevard

Under the 2050 cumulative plus project condition, the signalized intersections are expected to operate at LOS E or better, including two (Katella Avenue/Beach Boulevard and Cerritos Avenue/Dale Avenue) which will operate at LOS C or better in both peak hours. The three minor street movements expected to operate at LOS F without the project will continue to operate at LOS F. Further, the Cerritos Avenue/Fern Avenue minor street movement will deteriorate to LOS E in the AM peak hour and LOS F in the PM peak hour, and the Cerritos Avenue/Ashdale Street intersection will deteriorate to LOS E in the PM peak hour. None of the signalized intersections are expected to meet the City impact threshold, and there is no operational threshold for unsignalized intersections. Therefore, no improvements will be needed.

Although several movements at unsignalized intersections are expected to operate at LOS F in one or both peak hours with or without the project, there are alternative routes that drivers can take if delays become excessive. In addition, drivers can make two-stage left turns using the existing medians and/or two-way left turn lanes, which may further reduce delay beyond what the model reported.

Lastly, the project is located in a Transit Priority Area and is expected to have an FAR of approximately 0.75. Therefore, the project is assumed to have a less than significant impact on transportation, and no further VMT analysis is required at this time. However, it is possible that future developments within the project area will not be exempt and will need to complete a detailed VMT analysis.

1.0 INTRODUCTION AND SUMMARY

1.1 INTRODUCTION

The purpose of this document is to present public comments and responses to those comments received on the Draft Subsequent Initial Study/Mitigated Negative Declaration (Draft Subsequent IS/MND) for the Stanton Town Center Specific Plan Project (State Clearinghouse Number 2023110397). The City of Stanton, as the Lead Agency, has evaluated all substantive comments and has prepared written responses. In accordance with the California Environmental Quality Act (CEQA) Guidelines (Title 14 California Code of Regulations [CCR] Section 15074[b]), the decision-making body of the Lead Agency must consider the Subsequent IS/MND and comments received before approving the Project. This document, which will be provided to the City Council, as the decision-making body, has been prepared in accordance with CEQA and represents the independent judgment of the Lead Agency.

In accordance with the State CEQA Guidelines, Section 15073, the Draft Subsequent IS/MND was circulated for a 30-day public review and comment period beginning on November 15, 2023 and ending on December 14, 2020. Additionally, the Draft Subsequent IS/MND was available at the City of Stanton website. During the public review period, the City received a total of three comment letters from State and regional/local agencies on the Draft Subsequent IS/MND. Written responses have been prepared to all comments received during the comment period and are included in Section 3.0 of this document.

The Final Subsequent IS/MND consists of three documents: (1) the Draft Subsequent IS/MND; (2) the Technical Appendices; and (3) the Responses to Comments document. The Responses to Comments document includes four sections: Section 1.0, provides the introduction; Section 2.0 provides a list of commenters on the Draft Subsequent IS/MND; Section 3.0 provides responses to environmental comments received on the environmental document; and Section 4.0 includes the revisions to the text of the Draft Subsequent IS/MND.

1.2 PROPOSED DEVELOPMENT

The approximate 156.9-acre Project site is in the northern portion of the City of Stanton, which is generally situated south of the cities of Anaheim and Buena Park, west of Garden Grove, and north of Westminster. The Specific Plan area is generally bounded by Cerritos Avenue to the north, Dale Avenue to the east, Katella Avenue to the south, and Rose Street to the west. Existing land uses surrounding the Specific Plan area include a mix of small commercial centers along Beach Boulevard; single-family and multi-family residential uses to the north; a Southern California Edison (SCE) substation and industrial uses to the east; industrial and commercial uses, including ORCO Block and Hardscape and a shopping center anchored by Food 4 Less, to the south; single- and multi-family residential uses to the west; and Stanton City Hall, Stanton Library, and an Orange County Sheriff Substation to the southwest.

The proposed Town Center Specific Plan is intended to improve, enhance, and supplement the land uses within the Specific Plan area by creating a mixed-use, pedestrian-friendly environment. The Project proposes an increase of 139 multi-family dwelling units, excluding accessory dwelling units (ADUs) located on single-family properties. Additionally, with the Project, the Beach Boulevard corridor would be transformed into a mixed-use and pedestrian-friendly community while protecting the existing single-family uses. New gateways are required for corner properties, and opportunities would be created along Beach Boulevard at its intersections with Cerritos Avenue and Katella Avenue to identify the arrival into the Stanton Town Center. The Specific Plan will include policies, guidelines and standards designed to sustain the vision for the Town Center Specific Plan and ensure that future projects stay consistent with the goals and objectives and maintain the intended image for the area.

While the Specific Plan area would increase residential multifamily units, retail/commercial, and light industrial uses through new development and redevelopment, it should be noted that, the Subsequent IS/MND analyzes the potential impacts of the additional 139 multi-family dwelling units only. The existing General Plan for the City of Stanton allows for a total of 1,399 multi-family units within the Town Center Specific Plan area. Since 2008, 4 units have been built, resulting in a remaining capacity of 1,395 multi-family units. The Town Center Specific Plan would allow for an additional 139 units, increasing the remaining capacity to 1,534 multi-family units. The 2008 General Plan Environmental Impact Report (EIR) analyzed the potential impacts emanating from development of 1,399 units. As such, only the additional 139 units are the topic of the environmental analysis in the Subsequent IS/MND.

2.0 LIST OF COMMENTERS

The following is a list of commenters that submitted written comments on the Draft Subsequent IS/MND. The comments included written correspondence. The comments are listed chronologically and numbered. The responses have been prepared to match the bracketing on the comment letters. Each comment letter is followed by responses to address the comments. The comment letters and responses are included in Section 3.0 of this document.

No.	Commenter	Date of Correspondence	Page Number
<i>State Agencies</i>			
1	Department of Transportation, District 12 (DOT)	December 13, 2023	3-3
2	Department of Toxic Substances Control (DTSC)	December 14, 2023	3-11
<i>Local and Regional Agencies</i>			
3	Orange County Transportation Authority (OCTA)	December 13, 2023	3-21

This page intentionally left blank.

3.0 RESPONSES TO COMMENTS

The City's responses to comments received on the Draft Subsequent IS/MND are provided below. The responses are numbered to match the bracketing on the comment letter. Comment letters received are categorized by State agencies and regional/local agencies. Within each category, the responses are provided chronologically.

3.1 STATE AGENCIES

Two comment letters were received from the State agencies. The comment letters are listed below:

- Department of Transportation, District 12 (DOT)—December 13, 2023
- Department of Toxic Substances Control (DTSC)—December 14, 2023

 Stanton, CA 90860

File: LDR/CEQA
 SCH#2023110397
 LDR LOG #2023-02426
 SR-22, SR-39

Dear Mr. Anaya

Thank you for including the California Department of Transportation (Caltrans) in the review of the Stanton Town Center Specific Plan Mitigated Negative Declaration (MND). The proposed Town Center Specific Plan, comprised of 156.9 acres, is intended to improve, enhance, and supplement the land uses within the Specific Plan area by creating a mixed-use, pedestrian-friendly environment. The Project proposes an increase of 139 multi-family dwelling units, excluding accessory dwelling units located on single-family properties. While the Specific Plan area would increase residential multifamily units, retail/commercial, and light industrial uses through new development and redevelopment, the Subsequent MND analyzes the potential impacts of the additional 139 multi-family dwelling units only. Additionally, the Beach Boulevard corridor would be transformed into a mixed-use and pedestrian-friendly community while protecting the existing single-family uses. New gateways are required for corner properties, and opportunities would be created along Beach Boulevard at its intersections with Cerritos Avenue and Katella Avenue to identify the arrival into the Stanton Town Center. The Specific Plan will include policies, guidelines and standards designed to sustain the vision for the Stanton Town Center. The nearest state facility to the project site are SR-22 and SR-39.

DOT-1

The mission of Caltrans is to provide a safe and reliable transportation network that serves all people and respects the environment. Caltrans is a responsible agency on this project and has the following comments:

DOT-2

1. Please conduct a queue analysis from the SR-22 EB and WB off ramps at Beach Boulevard based on the 95-percentile queue. The analysis needs to demonstrate that the off ramps will have the sufficient vehicular storage and will be able to accommodate the additional trips.

DOT-3

"Provide a safe and reliable transportation network that serves all people and respects the environment"

Mr. Irving Anaya
December 13, 2023
Page 2

2. Project must conform with standards set forth in the Caltrans Highway Design Manual for all facilities within State right of way, including ADA accessibility standards or receive approval for deviations. Project must conform to procedures set forth in the Caltrans Project Delivery Procedures manual. Project will coordinate with Caltrans projects in all stages of development, including Middle Mile Broadband Initiative and potential relinquishment proposal.

DOT-4

3. In addition to the proposed Class II bikeway on Katella and Dale and Class I on the Stanton Storm Channel and former Pacific Electric Railroad, consider separated infrastructure such as Class IV bikeways where feasible along major streets connecting residents to transit and job centers (for example, along Katella, Beach, and Cerritos). Please work with adjacent cities and regional entities (i.e., where it concerns SR-39, consult Caltrans) from inception to completion on any cross-jurisdictional complete streets projects. Working with local and regional partners may produce a stronger, more integrated network of active transportation in the area, thus lowering greenhouse gas emissions and reducing traffic congestion, among other benefits.

DOT-5

4. Please consider Caltrans DIB 89-02 (<https://dot.ca.gov/-/media/dot-media/programs/design/documents/dib-89-02-final-a11y.pdf>) when designing and implementing Class IV bikeways; consider HDM 1003.1 ([CHAPTER 1000 \(ca.gov\)](https://www.caltrans.ca.gov/programs/design/documents/hdm-1003-1-final-a11y.pdf)) when designing Class I bikeways. For additional guidance on proposed bike parking, see “Essentials of Bike Parking” guidance created by the Association of Pedestrian and Bicycle Professionals (link to online PDF: <https://www.apbp.org/Publications>). For resources to ensure local and regional connectivity, please review OC Active https://www.octa.net/pdf/OC_ACTIVE_REPORT_2019-12-23.pdf. In addition, OC Bikeway Report (West/Central) proposes a network of bicycle infrastructure in the project area, including a major Class I corridor utilizing the Pacific Electric RR Right of Way. <https://octa.net/pdf/OCTAD12%20Report12-31-2013.pdf> (pdf pg. 22)

DOT-6

5. Caltrans supports the design of Complete Streets that include high-quality pedestrian, bicycle, and transit facilities that are safe and comfortable for users of all ages and abilities. In addition to bicycle parking, consider enhancements such as pedestrian-oriented LED lighting, wayfinding signage, and comfortable connections to nearby active transportation and/or transit facilities. Complete Streets improvements also promote regional connectivity, improve air quality,

DOT-7

“Provide a safe and reliable transportation network that serves all people and respects the environment”

Mr. Irving Anaya
December 13, 2023
Page 3

reduce congestion, promote improved first-/last-mile connections, and increase safety for all modes of transportation. Continue to incorporate Complete Streets in project development.	DOT-7
6. Consider encouraging or incentivizing the use of transit among both construction workers of the proposed development and future employees. Increasing multimodal transportation will lead to a reduction to congestion, Vehicle Miles Traveled, and improve air quality.	DOT-8
7. Ensure that truck parking, ingress and egress, and staging will not interfere with vehicle parking, pedestrian paths, or bicycle lanes/bicycle parking.	DOT-9
8. Establish freight pick up & drop off times that do not coincide with peak commute hours to reduce passenger vehicle conflicts and congestion for freight. Consider designating on-street freight-only parking and delivery time windows so trucks will not resort to double parking, thus causing street traffic congestion.	DOT-10
9. For the additional 139 multifamily residential units proposed, consider how many individual packages will be delivered daily to individual residences. Amazon lockers or an equivalent shared drop-off location can help reduce the amount of driving done by delivery trucks and can increase the efficiency of deliveries.	DOT-11
10. Work with local partners and community representatives to mitigate any truck traffic routing onto residential streets or conflicting with other road users, including and especially bicyclists and pedestrians.	DOT-12
11. Caltrans firmly embraces racial equity, inclusion, and diversity. These values are foundational to achieving our vision of a cleaner, safer, and more accessible and more connected transportation system. Please consider including a discussion on equity in the environmental document.	DOT-13
12. Any work performed within Caltrans right of way (R/W) will require discretionary review and approval by Caltrans and an encroachment permit will be required for any work within the Caltrans R/W prior to construction. Prior to submitting to Caltrans Permit's branch, applicant should fill out Applicant's Checklist to Determine Applicable Review Process (QMAP List) Form TR-0416 to determine if project oversight/coordination with Caltrans Project Manager is needed.	DOT-14

"Provide a safe and reliable transportation network that serves all people and respects the environment"

Mr. Irving Anaya
December 13, 2023
Page 4

Applicant must submit a signed Standard Encroachment Permit application form TR-0100 along with a deposit payable to Caltrans. Deposit amount will be dependent on when the application is submitted. Public corporations are legally exempt from encroachment permit fees. Please note that all utility work should be disclosed prior to permit submittal, and utility companies are to apply for separate permits for their corresponding work.

DOT-14

Please continue to coordinate with Caltrans for any future developments that could potentially impact State transportation facilities. If you have any questions, please do not hesitate to contact Maryam Molavi, at Maryam.Molavi@dot.ca.gov.

DOT-15

Sincerely,

Scott Shelley
Branch Chief – Local Development Review/Climate Change/Transit
District 12

"Provide a safe and reliable transportation network that serves all people and respects the environment"

Letter 1: Department of Transportation, District 12

Comment Letter Dated December 13, 2023

- DOT-1 The comment reiterates the Project description. No response is required.
- DOT-2 The comment regarding the mission of Caltrans for a safe and reliable transportation network is noted. Caltrans is a responsible agency on the Project. No further response is required.
- DOT-3 The comment regarding conducting a queue analysis is noted. Although the traffic study provides a preliminary analysis for the full buildout of the Specific Plan area, the Subsequent IS/MND only analyzes the potential impacts of the additional 139 multifamily dwelling units. The proposed 139 multifamily units are expected to generate 71 peak hour trips. Given the trip distribution, approximately 21 trips would travel to/from the south on Beach Boulevard and not all those trips would necessarily use the interchange at SR-22. Therefore, the study area was limited and does not include Caltrans intersections at this time. When future projects within the Specific Plan area are proposed, further studies may be required, and the Beach Boulevard/SR-22 ramp intersection may be evaluated at that time.
- DOT-4 The Project will be consistent with, or seek approval for deviation from, Caltrans Highway Design Manual standards—including ADA standards—for all facilities within State right-of-way, as appropriate. Additionally, the Project will comply with procedures in the Caltrans Project Delivery Procedures manual and will coordinate with Caltrans projects in all stages, including Middle Mile Broadband Initiative and potential relinquishment proposal.
- DOT-5 The comment regarding working with local and regional partners on any cross-jurisdictional complete streets projects is noted and will be forwarded to the decision makers. It should be recognized that while the comment pertaining to separated infrastructure such as Class IV bikeways along major streets is noted, and the City appreciates benefits of connecting residents to transit and job centers, incorporating Class IV bikeways along roadways such as Katella Avenue, Beach Boulevard, and Cerritos Street is beyond the scope of the proposed Stanton Town Center Specific Plan Project at this time.
- DOT-6 The comment providing resources pertaining to Class IV bikeways, Class I bikeways, bike parking, Association of Pedestrian and Bicycle Professionals, and network of bicycle infrastructure is noted and will be forwarded to the decision makers. No further response is required.
- DOT-7 The comment regarding incorporating multi-modal (pedestrian, bicycle, and transit) facilities and complete streets, which promote regional connectivity, improve air quality, reduce congestion, promote improved first-/last-mile connections is noted and will be forwarded to the decision makers.

As discussed in the Transportation section of the Subsequent IS/MND, the Stanton Town Center Specific Plan Project, is planned as a mixed-use neighborhood that blends existing uses with new development, maximizes access to existing transit opportunities, and includes a pedestrian and bicycle transportation network. The Specific Plan also incorporates conceptual future transit opportunities into its design, while ensuring that the success of the multi-modal network does not depend on the completion or final details of potential future transit opportunities.

The Stanton Town Center Specific Plan incorporates a “complete streets” approach that prioritizes creation of a true multi-modal transportation system that creates new connections throughout the Specific Plan area. Circulation enhancements are envisioned throughout the Specific Plan area to facilitate multi-modal connectivity and increase pedestrian safety. Design features include, but are not limited to, pavement enhancements such as textured and/or colored concrete or pavers; pedestrian built-out crossings to increase pedestrian visibility; wayfinding signage; new crossings for pedestrians and bicyclists; and short- and long-term bicycle parking.

Additionally, as part of future enhancements, a potential trail is proposed along the existing east-west rail corridor traversing the Specific Plan area. This potential future trail is to connect to another potential trail along the Stanton Storm Channel, which would also provide connectivity to the northeastern portion of the Project site. Court Avenue is also envisioned to include additional pedestrian enhancements, including a future connection across the east-west rail corridor. The pedestrian-focused enhancements along Court Avenue from Katella Avenue to Main Street, will increase connectivity between the southern and northern portions of the Specific Plan Area.

In terms of transit, the Specific Plan area is served by OCTA bus routes. A potential future transit station is identified on the OCTA property located along Beach Boulevard. This transit center could connect users of a potential future light-rail along the former Pacific Electric rail corridor to the multi-modal network within the Specific Plan area.

Lastly, the Stanton Town Center Specific Plan promotes bicycling as a means of mobility. As indicated above, as part of intersection improvements, new crossings are planned for pedestrian and bicyclists. The Specific Plan recognizes the needs of bicycle users and aims to create a safe bicycle network. Thus, considering the proposed enhancements and design guidelines promoting multi-modal circulation, the Project would be in compliance with Caltrans vision.

DOT-8 Please refer to Response DOT-7, above. Considering the availability of public transportation in the area, construction workers and future employees may choose to use transit, as convenient. Also, the comment regarding the benefits of multi-modal transportation in reducing congestion, Vehicle Miles Traveled

(VMT), and improving air quality is noted and will be forwarded to the decision makers.

- DOT-9 The comment regarding activities (truck parking, ingress and egress, and staging) during construction that could interfere with multi-modal circulation and parking is noted and will be forwarded to the decision makers. As discussed in the Transportation section of the Subsequent IS/MND, during demolition and construction activities of future projects, provisions would be in place, including but not limited to, staging construction equipment on the site; avoiding blocking the roadways surrounding the Project site; and maintaining fire/emergency access to the site to avoid impacts to existing circulation and parking. Further, to minimize any potential disruptions on the local circulation system and to facilitate the movement of construction traffic, it is assumed that the City would require implementation of a construction management plan, which is provided as regulatory requirement in the Transportation section.
- DOT-10 The comment regarding establishing freight pick up and drop off times to avoid congestion is noted. However, it should be recognized that the Project is not proposing any industrial uses that are not already allowed. As such, no additional freight is anticipated in the area that would result in potential conflicts with vehicular traffic and result in congestion. Thus, establishing on-street freight-only parking and delivery times would be speculative.
- DOT-11 The comment regarding delivery of packages to future residences and provision of shared drop-off locations, is noted and will be forwarded to the decision makers. While the City appreciates the efficiency of deliveries, provided that the Project is a Specific Plan, and no development project is proposed at this time, it may be speculative to determine the number of individual packages that will be delivered and/or lockers and shared drop off locations.
- DOT-12 Please refer to Response DOT-9, above.
- DOT-13 The comment regarding racial equity, inclusion, and diversity is noted and forwarded to the decision makers. While the City is committed to the same values, the request to include a discussion on equity is beyond the scope of a CEQA document. As such, the Subsequent IS/MND is not required and cannot be modified to discuss and/or identify any potential issues pertaining to equity.
- DOT-14 The comment regarding requirement for discretionary review and approval by Caltrans and an encroachment permit for any work within Caltrans right-of-way is noted. Future applicants will be aware of the application process in obtaining necessary approval and permits, as appropriate. The requirement for separate permits for utility work is also noted. No further response is required.
- DOT-15 The comment regarding coordination with Caltrans for future developments is noted and forwarded to the decision makers. No further response is required.

RE: MITIGATED NEGATIVE DECLARATION (MND) FOR THE STANTON TOWN
CENTER SPECIFIC PLAN, DATED NOVEMBER 15, 2023 STATE
CLEARINGHOUSE # [2023110397](#)

Dear Irving Anaya,

The Department of Toxic Substances Control (DTSC) received a MND for the Stanton Town Center Specific Plan (Project). The proposed Project comprised of 156.9 acres, is intended to improve, enhance, and supplement the land uses within the Specific Plan area by creating a mixed-use, pedestrian-friendly environment. The Project proposes an increase of 139 multi-family dwelling units, excluding accessory dwelling units located on single-family properties. While the Specific Plan area would increase residential multifamily units, retail/commercial, and light industrial uses through new development and redevelopment, the Subsequent MND analyzes the potential impacts of the additional 139 multi-family dwelling units only. Additionally, the Beach Boulevard corridor would be transformed into a mixed-use and pedestrian-friendly community while protecting the existing single-family uses. New gateways are required for corner

DTSC-1

Irving Anaya
December 14, 2023
Page 2

properties, and opportunities would be created along Beach Boulevard at its intersections with Cerritos Avenue and Katella Avenue to identify the arrival into the Stanton Town Center. The Specific Plan will include policies, guidelines and standards designed to sustain the vision for the Stanton Town Center.

DTSC-1

DTSC has identified that this project may affect multiple sites within the project boundaries therefore, based on our project review, we request the consideration of the following comments:

DTSC-2

1. The proposed project encompasses multiple active and nonactive mitigation and clean-up sites where DTSC has conducted oversight that may be impacted as a result of this project. This may restrict what construction activities are permissible in the proposed project areas in order to avoid any impacts to human health and the environment.

DTSC-3

2. Due to the broad scope of the project, DTSC is unable to determine all of the locations of the proposed project site, whether they are listed as having documented contamination, land use restrictions, or whether there is the potential for the project site to be included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5. DTSC recommends providing further information on the project site and areas that may fall under DTSC's oversight within the project area. Please review the [City of Stanton's project area](#) in [EnviroStor](#); DTSC's public-facing database.

DTSC-4

3. The Hazardous and Hazardous Material Section 4.9 includes properties that are currently undergoing an environmental cleanup with DTSC oversight. The two properties, the Former [Quicksand](#) property at 8358 Standustrial St. and [All Metals Processing Company](#) at 8401 Standustrial St., had historical releases of hazardous materials and hazardous waste to subsurface soils, groundwater, airborne dust particulate matter, and rain surface runoff. These two properties will not likely be suitable for residential use or for purposes involving

DTSC-5

Irving Anaya
December 14, 2023
Page 3

sensitive population such as a hospital, school, and daycare even after oversight of the environmental cleanup is completed. DTSC recommends that the City of Stanton consult with DTSC on any redevelopment involving residential use or use with sensitive population at these two locations and adjacent properties.

DTSC-5

DTSC believes the City of Stanton must address these comments to determine if any significant impacts under the California Environmental Quality Act (CEQA) will occur and, if necessary, avoid significant impacts under CEQA. DTSC recommends the department connect with our unit if any hazardous waste projects managed or overseen by DTSC are discovered.

DTSC-6

DTSC appreciates the opportunity to comment on the Stanton Town Center Specific Plan. Thank you for your assistance in protecting California's people and environment from the harmful effects of toxic substances. If you have any questions or would like any clarification on DTSC's comments, please respond to this letter or via [email](#) for additional guidance.

Letter 2: Department of Toxic Substances Control**Comment Letter Dated December 14, 2023**

- DTSC-1 The comment reiterates the Project description. No response is required.
- DTSC-2 The comment indicates that the Project may affect multiple sites within the Specific Plan area, as such DTSC requests consideration of their comments. The comment is noted, and responses are provided, below.
- DTSC-3 The comment refers to active and nonactive mitigation and clean-up sites within the Project area that may be impacted by the Project. To avoid potential impacts related to health and the environment, the comment adds, construction activities may be restricted within the Project area. The comment is noted and will be forwarded to the decision makers.

The discussion in Section 4.9, Hazards and Hazardous Materials, of the Subsequent IS/MND, under Threshold (d), identifies that *The EDR Radius Map™ Report with GeoCheck®: City of Stanton Town Center Specific Plan Project, Katella/Cerritos Avenue, Stanton, CA 90680 (Inquiry Number 6680025.2s)*, was prepared for the proposed Project by Environmental Data Resources (EDR) (2021). The report was prepared based on a one-mile radius of the Project site and consists of a search of federal, State, local, tribal, and other databases. The discussion discloses that eight Envirostor listings were reported within the one-mile radius, three of which are within the Specific Plan area. Additionally, the Leaking Underground Storage Tank (LUST) database, as provided by EDR, has disclosed that there are 56 LUST sites within an approximately 0.5-mile radius, 6 of which are located within the Specific Plan area.

However, the analysis in the Subsequent IS/MND determined that while development within the Specific Plan area may include redevelopment of one of these reported Envirostor and LUST regulatory properties in the future—no development project is proposed at this time—implementation of the proposed mitigation measure (MM HAZ-1) would ensure that all new development on the said sites involving hazardous materials or waste, prepare a Phase I Environmental Site Assessment (ESA) prior to future actions for land acquisition, demolition, and/or construction. It was concluded that potential impacts would be less than significant with implementation of MM HAZ-1, which is included below:

MM HAZ-1 *A formal Phase I Environmental Site Assessment (ESA) shall be prepared for a future project on any of the six Leaking Underground Storage Tank (LUST) sites within the Stanton Town Center Specific Plan area. The Phase I ESA shall be prepared in accordance with American Society for Testing and Materials (ASTM) Standard Practice E 1527-05 or the*

Standards and Practices for All Appropriate Inquiry (AAI), prior to any land acquisition and/or construction activities. The Phase I ESA shall identify specific Recognized Environmental Conditions (RECs), which may require further sampling/remedial activities by a qualified hazardous materials consultant with Phase II/site characterization and remedial experience prior to land acquisition, demolition, and/or construction.

DTSC-4 The comment indicates that DTSC cannot determine all locations within the Project area with documented contamination, land use restrictions, or if included on a list of hazardous materials sites. DTSC requests additional information on sites that may fall under DTSC's oversight within the Project area. The comment is noted and will be forwarded to the decision makers.

As discussed above and included in Appendix B of the Subsequent IS/MND, *The EDR Radius Map™ Report with GeoCheck* (2021) prepared for the proposed Project, includes search parameters based on a one-mile radius of the Project site and consists of a search of federal, State, local, tribal, and other databases. The complete list of databases and additional information regarding the identified sites can be found in Appendix C of the Subsequent IS/MND. Three of the eight Envirostor listings are within the Project area. Those three locations are included in the Subsequent IS/MND and provided below. An updated search of the EnviroStor database, using the "City of Stanton" Project area, was conducted, and additional information to the three locations is hereby incorporated on page 4-64 (Threshold "d"), in Section 4.9, Hazards and Hazardous Materials, of the Subsequent IS/MND (deleted text is shown in ~~red strikethrough~~ while new text is shown in *red italics*):

- *All Metals Processing (ESTOR/EPA ID 30340041)/ All Metals Processing Co. of Orange Co. (ESTOR/EPA ID 71002315), 8401 Standustrial Street/Avenue. The Program Type is Historical and Tiered Permit. The Status is "Refer: Other Agency" and "Active."* Last reported activities listed in the EDR Report include a Supplemental Site Investigation Workplan on November 3, 2020, and a Monitoring Report on March 8, 2021. The EDR Report also indicates that a Corrective Measures Study Report, Remedial Action Completion Plan, and a Remedy Selection and Statement of Basis are due in 2023. Additionally, the EDR Report identifies that a Land Use Restriction document is due in 2024.
- *Dichem Dresser/Calla Chemical (ESTOR/EPA ID 30280009), 8100 Electric Avenue. The Program Type is Tiered Permit. The Status is ~~unknown and references~~ "Refer: Other Agency".*
- *Quicksand (ESTOR/EPA ID 70000085), 8358 Standustrial Street. The Program Type is Voluntary Cleanup. The Status is "Aactive." Last*

reported activity in the EDR report is a Remedial Investigation/Feasibility Study on March 29, 2021. A Site Characterization Report was due in 2021, but no additional information about this characterization report is provided in the EDR Report.

Further, the following EnviroStor listing was identified within 0.765 mile from the Project area. The additional listing is hereby incorporated on page 4-65 (Threshold “d”), in Section 4.9, Hazards and Hazardous Materials, of the Subsequent IS/MND (deleted text is shown in ~~red strikethrough~~ while new text is shown in *red italics*):

- *Basic Electronics, Inc. (ESTOR/EPA ID 71002748), 11762 Wester Avenue O. The Program Type is Tiered Permit. The Status is “No Further Action.”*

The above revisions do not require recirculation of the Subsequent IS/MND under CEQA Guidelines Section 15073.5(c)(4).

Additionally, the LUST database, as provided by EDR, disclosed that 56 LUST sites exist within approximately 0.5 mile of the Project area, six of which are within the Project area. The six sites are included in the IS/MND and provided below:

- *Santa Ana Regional W, 10632 Beach Blvd.* Status is Open – Site Assessment. Facility Status is Preliminary Site Assessment Underway
- *California Shipping, 8151 Electric Avenue.* Status is Complete- Case Closed. Facility Status is Pollution Characterization
- *California Comfort V, 8130 Electric Avenue.* Status is Complete- Case Closed. Facility Status is Pollution Characterization
- *Abel Concrete, 8251 Katella Avenue.* Status is Complete – Case Closed. Facility Status is Preliminary Site Assessment Underway
- *G&M Oil Co #50; 10961 Beach Blvd.* Status is Open- Site Assessment.
- *G&M Oil #50, 10961 Beach Blvd.* Facility Status is Pollution Characterization.

Considering no specific projects nor locations are identified at this time, providing additional information may not be feasible. In the future, when specific projects are proposed, the site-specific Phase I ESAs, as required, would identify the potential issues and whether the site fall under DTSC’s oversight.

DTSC-5 The comment references two sites within the Project area that are undergoing environmental cleanup with DTSC oversight. These two properties, Quicksand and All Metals Processing Company are identified, above. The comment adds

that due to the conditions of these two properties, they will not be suitable for residential use or any use involving sensitive population even after the cleanup is completed. DTSC requests that the City consult with them upon future redevelopment of these two sites. The comment is noted and will be forwarded to the decision makers.

As indicate above, no development projects are proposed at this time, but the City concurs that future development on the said properties would need to be considered carefully and coordinated with DTSC to avoid potential impacts to the future sensitive population on these properties.

DTSC-6 The comment regarding potential significant impacts under CEQA and coordination with DTSC is noted and will be forwarded to the decision makers. No further response is required.

DTSC-7 The comment expresses appreciation for the opportunity to comment on the proposed Project. The comment is noted and will be forwarded to the decision makers. No further response is required.

3.2 REGIONAL/LOCAL AGENCIES

One comment letter was received from the local/regional agencies. The comment letter is listed below:

Subject: Notice of Intent (NOI) to adopt a Subsequent Mitigated Negative Declaration for the Stanton Town Center Specific Plan

Dear Mr. Anaya:

Thank you for providing the Orange County Transportation Authority (OCTA) with the Notice of Intent (NOI) to Adopt a Subsequent Mitigated Negative Declaration (IS-MND) regarding the Stanton Town Center Specific Plan. The following comments are provided for you:

OCTA-1

- On page 4-131 and in Exhibit 2-1 (Opportunities and Challenges) of the IS-MND OCTA bus Routes 29 and 50 are depicted. Please add OCTA bus Route 529 to page 4-131 and Exhibit 2-1, as it also serves the project area.

OCTA-2

- On page 3-8 of the Draft Town Center Specific Plan Book, under Section 3.5.1 "Existing Circulation Infrastructure" OCTA bus Routes 29 and 50 are identified to serve the project area. Please also include OCTA bus Route 529 as this route also serves the project area.

OCTA-3

Throughout the development of this project, we encourage communication with OCTA on any matters discussed herein. If you have any questions or comments, please contact me at (714) 560-5907 or at dphu@octa.net.

OCTA-4

Sincerely,

Dan Phu
Manager, Environmental Programs

Letter 3: Orange County Transportation Authority

Comment Letter Dated December 13, 2023

- OCTA-1 The comment expresses appreciation for having received the Notice of Intent (NOI) for the proposed Project. The comment is noted, and no further response is required.
- OCTA-2 The comment indicates that page 4-131 and Exhibit 2-1 of the IS/MND do not identify the additional OCTA bus Route 529 that serves the Project area. The comment is noted, and the discussion is revised for clarification. These revisions do not require recirculation of the Subsequent IS/MND under CEQA Guidelines Section 15073.5(c)(4). The following revisions are hereby incorporated on page 4-131 (under Transit), in Section 4.17, Transportation, of the Subsequent IS/MND (deleted text is shown in ~~red strikethrough~~ while new text is shown in *red italics*):
- Transit
- The Specific Plan area is served by OCTA Routes 29, ~~and~~ 50, *and 529*, as depicted on Exhibit 2-1, Opportunities and Challenges. A potential future transit station is identified on the OCTA property located along Beach Boulevard. This transit center could connect users of a potential future light-rail along the former Pacific Electric rail corridor to the multi-modal network within the Specific Plan Area.
- However, no revisions are necessary to Exhibit 2-1, Opportunities and Challenges in Section 2.0, Project Location and Environmental Setting, of the Subsequent IS/MND. OCTA Routes 29 and 259 follow the same route throughout the Project site, and as no bus route numbers are identified on Exhibit 2-1, the exhibit correctly reflects all OCTA bus routes.
- OCTA-3 The comment requests the above revision to the Draft Town Center Specific Plan. The comment is noted. Please refer to the Town Center Specific Plan.
- OCTA-4 The comment encourages communication with OCTA. The comment is noted and will be forwarded to the decision makers. No further response is required.

4.0 REVISIONS AS PART OF THE FINAL SUBSEQUENT IS/MND

Revisions have been made to the Draft Subsequent IS/MND based on input received during the public review period and while preparing the responses to comments on the Draft Subsequent IS/MND. The revisions requested do not reflect a substantial change to the Project description, nor would any of the changes result in a new impact or intensification of an impact already identified in the Draft Subsequent IS/MND. The changes are not in response to comments that raise significant environmental issues. Additions to the Draft Subsequent IS/MND are shown in *red italicized* text and deletions are shown in ~~red strikethrough~~ text.

4.1 REVISIONS TO THE DRAFT SUBSEQUENT IS/MND

4.1.1 SECTION 4.9, HAZARDS AND HAZARDOUS MATERIALS

In response to DTSC comment letter pertaining to hazardous materials sites and an updated search of the EnviroStor database, using the “City of Stanton” Project area, was conducted, and the following additional information is hereby incorporated on page 4-64 (Threshold “d”), in Section 4.9, Hazards and Hazardous Materials, of the Subsequent IS/MND (deleted text is shown in ~~red strikethrough~~ while new text is shown in *red italics*):

- *All Metals Processing (ESTOR/EPA ID 30340041)/ All Metals Processing Co. of Orange Co. (ESTOR/EPA ID 71002315), 8401 Standustrial Street/Avenue. The Program Type is Historical and Tiered Permit. The Status is “Refer: Other Agency” and “Active.”* Last reported activities listed in the EDR Report include a Supplemental Site Investigation Workplan on November 3, 2020, and a Monitoring Report on March 8, 2021. The EDR Report also indicates that a Corrective Measures Study Report, Remedial Action Completion Plan, and a Remedy Selection and Statement of Basis are due in 2023. Additionally, the EDR Report identifies that a Land Use Restriction document is due in 2024.
- *Dichem Dresser/Calla Chemical (ESTOR/EPA ID 30280009), 8100 Electric Avenue. The Program Type is Tiered Permit. The Status is ~~unknown and references~~ “Refer: Other Agency”.*
- *Quicksand (ESTOR/EPA ID 70000085), 8358 Standustrial Street. The Program Type is Voluntary Cleanup. The Status is “Aactive.”* Last reported activity in the EDR report is a Remedial Investigation/Feasibility Study on March 29, 2021. A Site Characterization Report was due in 2021, but no additional information about this characterization report is provided in the EDR Report.

Further, the following EnviroStor listing was identified within 0.765 mile from the Project area. The additional listing is hereby incorporated on page 4-65 (Threshold “d”), in Section

4.9, Hazards and Hazardous Materials, of the Subsequent IS/MND (deleted text is shown in ~~red strikethrough~~ while new text is shown in *red italics*):

- *Basic Electronics, Inc. (ESTOR/EPA ID 71002748), 11762 Wester Avenue O. The Program Type is Tiered Permit. The Status is "No Further Action."*

4.1.2 SECTION 4.17, TRANSPORTATION

In response to OCTA comment letter pertaining to OCTA bus Route 529, the following revisions are hereby made to the text of the Subsequent IS/MND under Transit, on page 4-131 of Section 4.17, Transportation, of the Subsequent IS/MND (deleted text is shown in ~~red strikethrough~~ while new text is shown in *red italics*):

Transit

The Specific Plan area is served by OCTA Routes 29, ~~and~~ 50, *and 529*, as depicted on Exhibit 2-1, Opportunities and Challenges. A potential future transit station is identified on the OCTA property located along Beach Boulevard. This transit center could connect users of a potential future light-rail along the former Pacific Electric rail corridor to the multi-modal network within the Specific Plan Area.

1.0 MITIGATION MONITORING AND REPORTING PROGRAM

1.1 INTRODUCTION

In accordance with the requirements of Section 21081.6 of the California Public Resources Code, and as part of its certification of the adequacy of Final Subsequent Mitigated Negative Declaration to the 2008 General Plan Environmental Impact Report (Final Subsequent MND) for the Stanton Town Center Specific Plan Project (Project), the City Council (Council) of the City of Stanton (City) adopts the following Mitigation Monitoring and Reporting Program (MMRP). The Council adopts this MMRP in its capacity as the lead agency for the Final Subsequent MND in accordance with the provisions of the California Environmental Quality Act (CEQA) (California Public Resources Code Section 21000 et seq.), the State CEQA Guidelines (California Code of Regulations, Title 14, Section 15000 et seq.), and the City of Stanton Monitoring Requirements.

1.2 MITIGATION MONITORING PROCEDURES

The principal purpose of the MMRP is to ensure that the Council-approved mitigation measures and development requirements for the adopted Project are reported and monitored to ensure compliance with the measures' requirements. In general, City of Stanton, Community & Economic Development Department is responsible for overseeing implementation and completion of the adopted measures. This includes the review of all monitoring reports, enforcement actions, and document disposition, unless otherwise noted in the MMRP Table. However, the Council retains overall responsibility for verifying implementation of all adopted mitigation measures.

1.3 MITIGATION MONITORING AND REPORTING PROGRAM

The MMRP is provided in tabular format to facilitate effective tracking and documentation of the status of mitigation measures and regulatory requirements. The MMRP Table provides the following monitoring information:

- **Mitigation Measures.** All adopted mitigation measures for the Project from the Final Subsequent IS/MND are included.
- **Regulatory Requirements.** All adopted regulatory requirements for the Project from the Final Subsequent IS/MND are included.
- **Responsible for Implementation.** The Project Applicant or designated representative is the responsible party for implementing the mitigation measures and regulatory requirements, unless noted differently.
- **Timing of Mitigation Measures and Regulatory Requirements.** A time frame is provided for performance of the mitigation measures and regulatory requirements, and the specific action deadline is designed to ensure that impact-related components

do not proceed without establishing that the mitigation measure or regulatory requirement is implemented.

- **Responsibility for Monitoring.** The City Department(s) or other public agency(ies) responsible for overseeing the implementation and completion of mitigation measures and regulatory requirements is listed, unless noted differently.
- **Completion Date.** The dates the mitigation measures and regulatory requirements are completed are to be filled in by the approving/verifying authority at a later date. Upon completion, the MMRP and associated documentation will be kept on file at the City of Stanton, Community & Economic Development Department.

1.4 STANTON TOWN CENTER SPECIFIC PLAN PROJECT

1.4.1 PROJECT LOCATION

The approximate 156.9-acre Project site is in the northern portion of the City of Stanton, which is generally situated south of the cities of Anaheim and Buena Park, west of Garden Grove, and north of Westminster. The Specific Plan area is generally bounded by Cerritos Avenue to the north, Dale Avenue to the east, Katella Avenue to the south, and Rose Street to the west.

Regional access to the Specific Plan area is provided primarily by Beach Boulevard (State Route [SR] 39), which runs in a north-south direction through the Specific Plan area, and Katella Avenue, which runs in an east-west direction south of the Specific Plan area. Beach Boulevard provides direct access to SR 22 to the south and SR 91 to the north, and Katella Avenue provides direct access to Interstate 5 (I-5) to the east.

1.4.2 PROJECT DESCRIPTION SUMMARY

The proposed Town Center Specific Plan, comprised of 156.9 acres, is intended to improve, enhance, and supplement the land uses within the Specific Plan area by creating a mixed-use, pedestrian-friendly environment. The Project proposes an increase of 139 multi-family dwelling units, excluding accessory dwelling units (ADUs) located on single-family properties.

With the Project, the Beach Boulevard corridor would be transformed into a mixed-use and pedestrian-friendly community while protecting the existing single-family uses. New gateways are required for corner properties, and opportunities would be created along Beach Boulevard at its intersections with Cerritos Avenue and Katella Avenue to identify the arrival into the Stanton Town Center. The Specific Plan area would also increase residential multifamily units, retail/commercial, and light industrial uses through new development and redevelopment.

**STANTON TOWN CENTER SPECIFIC PLAN PROJECT
MITIGATION MONITORING AND REPORTING PROGRAM**

Mitigation Measures	Responsible for Implementation	Timing of Mitigation	Responsibility of Monitoring	Completion Date (Signature Required)
AESTHETICS				
<i>Regulatory Requirements</i>				
RR AES-1 Future projects within the Specific Plan area shall comply with Streetscape Light and Exterior Lighting guidelines identified in the Town Center Specific Plan.	Project Applicant/ Developer	Design review	City Planning Division and City Public Works	
RR AES-2 Future projects within the Specific Plan area shall comply with Section 20.300.080, Outdoor Light and Glare, of the City of Stanton Municipal Code.	Project Applicant/ Developer	Design review	City Planning Division	
AIR QUALITY				
<i>Regulatory Requirements</i>				
RR AIR-1 All construction activities shall be conducted in compliance with South Coast Air Quality Management District's Rule 403, Fugitive Dust, for controlling fugitive dust and avoiding nuisance. Contractor compliance with Rule 403 requirements shall be mandated in the contractor's specifications (SCAQMD 2022).	Project Contractor	During construction	Building and Safety Division	
RR AIR-2 All construction activities shall be conducted in compliance with South Coast Air Quality Management District Rule 402, Nuisance, which states that a project shall not "discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health, or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property" (SCAQMD 2022).	Project Contractor	During construction	Building and Safety Division	
BIOLOGICAL RESOURCES				
<i>Regulatory Requirements</i>				
RR BIO-1 All future projects within the Town Center Specific Plan area shall comply with the most current adopted City of Stanton Municipal Codes regarding landscaping standards and requirements, including but not limited to, City of Stanton Municipal Code Chapter 12.20, Street Tree Plan.	Project Applicant/ Developer	During and after Construction	City Planning Division and City Public Works	

**STANTON TOWN CENTER SPECIFIC PLAN PROJECT
MITIGATION MONITORING AND REPORTING PROGRAM**

Mitigation Measures	Responsible for Implementation	Timing of Mitigation	Responsibility of Monitoring	Completion Date (Signature Required)
RR BIO-2 All future projects within the Town Center Specific Plan area shall comply with the Design Guidelines and Development Standards pertaining to landscaping.	Project Applicant/ Developer	During and after Construction	City Planning Division	
Mitigation Measures				
MM BIO-1 Prior to the issuance of any grading permits, the Community & Economic Development Director or designee shall verify that the following requirements for nesting birds and preconstruction survey are completed: <ul style="list-style-type: none"> • The start of site-preparation activities and subsequent construction activity initiation shall be scheduled outside of the bird nesting and breeding season (typically February 15 through August 30). If site-preparation activities start during the nesting season, a qualified Biologist shall conduct a nesting bird survey in potential bird nesting areas within 200 feet of any proposed disturbance. The survey shall be conducted no more than three days prior to the start of any ground disturbance activities. • If active nests of bird species protected by the Migratory Bird Treaty Act (MBTA) and/or California Fish and Game Code are present in the impact area or within 200 feet of the impact area, a no-entry buffer shall be established around the nest site to minimize potential impacts to the nest occupants. The size and duration of this temporary buffer shall be determined by the qualified Biologist who will account for the bird species and type of disturbance proposed. • Clearing and/or construction activities within buffer areas shall be postponed or halted until the nest is complete (e.g., juveniles have fledged from the nest and there is no evidence of a second nesting attempt) as determined by a qualified Biologist. 	Project Applicant/ Developer	Prior to the Issuance of Any Grading Permits	City Planning Division	

**STANTON TOWN CENTER SPECIFIC PLAN PROJECT
MITIGATION MONITORING AND REPORTING PROGRAM**

Mitigation Measures	Responsible for Implementation	Timing of Mitigation	Responsibility of Monitoring	Completion Date (Signature Required)
CULTURAL RESOURCES				
<i>Regulatory Requirements</i>				
RR CUL-1 If human remains are encountered during any Project-related ground-disturbing activities, Section 7050.5 of the California Health and Safety Code states that no further disturbance shall occur until the County Coroner has made a determination of origin and disposition of the materials pursuant to Section 5097.98 of the California Public Resources Code. The provisions of Section 15064.5 of the California Environmental Quality Act (CEQA) Guidelines shall also be followed. The County Coroner must be notified of the find immediately. If the remains are determined to be prehistoric, the Coroner shall notify the Native American Heritage Commission (NAHC). The NAHC will determine and notify a Most Likely Descendent (MLD). With the permission of the landowner or his/her authorized representative, the MLD may inspect the site of the discovery. The MLD must complete the inspection within 24 hours of notification by the NAHC. The MLD may recommend scientific removal and nondestructive analysis of human remains and items associated with Native American burials. These requirements shall be included as notes on the contractor specification and verified by the Community Development Department, prior to issuance of grading permits. This measure shall be implemented to the satisfaction of the City in consultation with the County Coroner.	Project Applicant/ Developer/ Contractor	During Ground Disturbing Activities	City Planning Division	
<i>Mitigation Measures</i>				
MM CUL-1 A qualified archaeologist (the "Project Archaeologist") that meets the Secretary of Interior Standards (SOI) shall be retained prior to the start of grading for Project-related construction. The Project Archaeologist shall monitor all ground-disturbing activities within the areas of native soil (i.e., below existing areas of artificial fill from previous construction). If archaeological or historical resources	Project Archaeologist	Prior to Start of Grading	City Planning Division	

**STANTON TOWN CENTER SPECIFIC PLAN PROJECT
MITIGATION MONITORING AND REPORTING PROGRAM**

Mitigation Measures	Responsible for Implementation	Timing of Mitigation	Responsibility of Monitoring	Completion Date (Signature Required)
are encountered during implementation of any phase of the Project, the Project Archaeologist will be allowed to temporarily divert or redirect grading or excavation activities in the vicinity of the find in order to make an evaluation of the find.				
GEOLOGY AND SOILS				
Regulatory Requirements				
RR GEO-1 The proposed Project shall be constructed in accordance with the Stanton Building Code, Title 16, Division 1, Chapter 16.04 (Building Code) of the City's Municipal Code and any other applicable building standards.	Project Applicant/ Developer	Design Phase	Building and Safety Division	
Mitigation Measures				
MM GEO-1 Site specific geotechnical investigations by a State-licensed geologist and/or civil engineer shall be required for all future projects within the Town Center Specific Plan.	Project Applicant/ Developer	Prior to the Issuance of a Grading Permit	City Public Works and Building and Safety Division	
MM GEO-2 In the event paleontological resources are encountered during construction, ground-disturbing activity shall cease. A Qualified Paleontologist that meets the Society for Vertebrate Paleontology (SVP) shall be retained by the Applicant to examine the materials encountered, assess the nature and extent of the find, and recommend a course of action to further investigate and protect or recover and salvage those resources that have been encountered. Criteria for discard of specific fossil specimens shall be made explicit. If a Qualified Paleontologist determines that impacts to a sample containing significant paleontological resources cannot be avoided by project planning, then recovery may be applied. Actions may include recovering a sample of the fossiliferous material prior to construction; monitoring work and halting construction if an important fossil needs to be recovered; and/or cleaning, identifying, and cataloging specimens for curation and research purposes. The cost associated	Paleontologist	During Construction and Ground Disturbing Activities	City Planning Division	

**STANTON TOWN CENTER SPECIFIC PLAN PROJECT
MITIGATION MONITORING AND REPORTING PROGRAM**

Mitigation Measures	Responsible for Implementation	Timing of Mitigation	Responsibility of Monitoring	Completion Date (Signature Required)
with recovery, salvage, and treatment shall be borne by the Applicant. All recovered and salvaged resources shall be prepared to the point of identification and permanent preservation by the Qualified Paleontologist. Resources shall be identified and curated into an established accredited professional repository. The Qualified Paleontologist shall have a repository agreement in hand prior to initiating recovery of the resource.				
GREENHOUSE GAS EMISSIONS				
Regulatory Requirements				
RR GHG-1 The Project shall be designed in accordance with the applicable Title 24 Energy Efficiency Standards for Residential and Nonresidential Buildings (<i>California Code of Regulations</i> [CCR], Title 24, Part 6). These standards are updated, nominally every three years, to incorporate improved energy efficiency technologies and methods. The Building Manager, or designee shall ensure compliance prior to the issuance of each building permit.	Project Applicant	Design Phase	Building and Safety Division	
RR GHG-2 Projects shall be designed in accordance with the applicable California Green Building Standards (CALGreen) Code (24 CCR 11). The Building Manager, or designee shall ensure compliance prior to the issuance of each building permit.	Project Applicant	Design Phase	Building and Safety Division	

**STANTON TOWN CENTER SPECIFIC PLAN PROJECT
MITIGATION MONITORING AND REPORTING PROGRAM**

Mitigation Measures	Responsible for Implementation	Timing of Mitigation	Responsibility of Monitoring	Completion Date (Signature Required)
HAZARDS AND HAZARDOUS MATERIALS				
<i>Mitigation Measures</i>				
MM HAZ-1 A formal Phase I Environmental Site Assessment (ESA) shall be prepared for a future project on any of the six Leaking Underground Storage Tank (LUST) sites within the Stanton Town Center Specific Plan area. The Phase I ESA shall be prepared in accordance with American Society for Testing and Materials (ASTM) Standard Practice E 1527-05 or the Standards and Practices for All Appropriate Inquiry (AAI), prior to any land acquisition and/or construction activities. The Phase I ESA shall identify specific Recognized Environmental Conditions (RECs), which may require further sampling/remedial activities by a qualified hazardous materials consultant with Phase II/site characterization and remedial experience prior to land acquisition, demolition, and/or construction.	Project Applicant/ Developer	Prior to Any Land Acquisition and/or Construction Activities	City Public Works, Building and Safety Division, and Orange County Environmental Health	
HYDROLOGY AND WATER QUALITY				
<i>Regulatory Requirements</i>				
RR HWQ-1 Storm Water Pollution Prevention Plan. Prior to the issuance of any grading or building permits, the Project Applicant shall demonstrate compliance with California's General Permit for Stormwater Discharges Associated with Construction Activity by providing a copy of the Notice of Intent (NOI) submitted to the State Water Resources Control Board and a copy of the subsequent notification of the issuance of a Waste Discharge Identification (WDID) Number or other proof of filing in a manner meeting the satisfaction of the City's Department of Public Works. Projects subject to this requirement shall prepare and implement a Storm Water Pollution Prevention Plan (SWPPP) during all phases of construction. A copy of the current SWPPP shall be kept at the construction site and be available for State and City review on request.	Project Applicant	Prior to Issuance of any Grading or Building Permits	City Public Works	

**STANTON TOWN CENTER SPECIFIC PLAN PROJECT
MITIGATION MONITORING AND REPORTING PROGRAM**

Mitigation Measures	Responsible for Implementation	Timing of Mitigation	Responsibility of Monitoring	Completion Date (Signature Required)
RR HWQ-2 General Waste Discharge Requirements. Prior to the issuance of any grading or building permits, if construction dewatering or discharges from other specific activities (e.g., dewatering from subterranean seepage, potable water system maintenance discharges, fire hydrant flushing, etc.) are required, the Project Applicant shall notify the Santa Ana RWQCB and any discharges into surface waters shall be conducted in compliance with the Santa Ana RWQCB's Order No. R8-2015-0004 (NPDES No. CAG998001), which includes General Waste Discharge Requirements (WDRs) for discharges to surface water that pose an insignificant (de minimis) threat to water quality. The General WDRs include provisions mandating notification, testing, and reporting of dewatering and testing-related discharges, and contain numeric and performance-based effluent limits depending upon the type of discharge.	Project Applicant	Prior to Issuance of any Grading or Building Permits	City Public Works	
RR HWQ-3 Water Quality Management Plan. Prior to the issuance of any grading or building permits, the Project Applicant shall submit for review and approval by the City's Public Works Department, a Project Water Quality Management Plan (WQMP) specifically identifying Best Management Practices (BMPs) that address Pollutants of Concern. The WQMP shall comply with the requirements of the Orange County MS4 Permit, the Orange County Drainage Area Management Plan (DAMP), Model WQMP, and Technical Guidance Manual, and the City's Local Implementation Plan (LIP), Citywide Urban Runoff Management Plan (CURMP), Project WQMP Preparation Guidance Manual, and pertinent regulations in the Municipal Code. TRANSPORTATION				
<i>Regulatory Requirements</i>				
RR TRA-1 To ensure impacts to the surrounding street system are kept at a minimum, a Construction Management Plan shall be developed for a future project, in coordination with the City of Stanton, prior to commencement of construction. The Construction Management Plan shall meet standards established in the current California Manual on Uniform Traffic Control Device (MUTCD) as well as City of Stanton requirements.	Project Applicant	Prior to Commencement of Construction	City Public Works and Caltrans	
TRIBAL CULTURAL RESOURCES				
<i>Mitigation Measures</i>				
MM TCR-1 In the event that tribal cultural resources are discovered at the Town Center Specific Plan area, the handling of the discovered resources shall occur, as described below. However, it is understood that all artifacts, with the exception of human remains and related grave goods or sacred/ceremonial objects, belong to the property owner. All resources discovered shall be inventoried and analyzed by the professional Archaeologist retained for the Project. If any resources of Native American origin are discovered, all activities in the immediate vicinity of the find (within a 50-foot radius) shall stop, and the project Archaeologist shall notify the property owner and tribes identified by the NAHC as being affiliated with the area. A designated Native American observer from one of the tribes identified by the NAHC as being affiliated with the area shall be retained to help analyze the Native American resources for identification as everyday life and/or religious or sacred items, cultural affiliation, temporal placement, and function, as deemed possible. The significance of Native American resources shall be evaluated in accordance with the provisions of the California Environmental Quality Act (CEQA) and shall consider the religious beliefs, customs, and practices of the	Project Applicant/ Project Archaeologist/ Native American Observer	During Ground Disturbing Activities	City Planning Division

REPORT TO THE PLANNING COMMISSION

TO: Chairperson and Members of the Planning Commission

DATE: January 17, 2024

SUBJECT: PUBLIC HEARING TO CONSIDER ADOPTION OF STANTON TOWN CENTER SPECIFIC PLAN AND CORRELATING GENERAL PLAN AMENDMENT, ZONE MAP AMENDMENT, AND SUBSEQUENT INITIAL STUDY AND MITIGATED NEGATIVE DECLARATION TO THE 2008 GENERAL PLAN ENVIRONMENTAL IMPACT REPORT.

RECOMMENDED ACTION

That the Planning Commission:

- Conduct a public hearing then consider all oral and written evidence presented; and
- Adopt Resolution No. 2563 recommending that the City Council approve the Stanton Town Center Specific Plan, General Plan Amendment, Zone Change, and certify the Subsequent Initial Study/Mitigated Negative Declaration prepared pursuant to CEQA and the State CEQA Guidelines (SP 23-01, GPA 23-01, ZC 23-01) (SCH No. 2023110397).

SUMMARY

The City of Stanton ("City") is proposing the Stanton Town Center Specific Plan ("TCSP" and/or "Specific Plan"). The Specific Plan is a policy document that will include guidelines and standards designed to sustain the vision for the Town Center Specific Plan. With the project, the Beach Boulevard corridor would be transformed into a mixed-use and pedestrian-friendly community while protecting the existing single-family uses.

The specific plan area encompasses approximately 156.9 acres centered around the Beach Boulevard and Main Street intersection. The area is generally bounded by Cerritos Avenue to the north, Dale Avenue to the east, Katella Avenue to the south, and Rose Street to the west.

Figure 1: Town Center Specific Plan Area

The Planning Commission is asked to review the TCSP, along with the Subsequent IS/MND, and recommend its adoption to the City Council. Approval of the TCSP will require a General Plan Amendment to change the land use designations of specific properties from Medium Density, High Density Residential, and Industrial to Town Center Mixed Use District. A Zone Change will also be required to change the zoning designations from Single-Family Residential (RL), Medium Density Residential (RM), Commercial Neighborhood (CN), Commercial General (GC), Industrial General (IG), and Public Institutional (PI) to Specific Plan (SP) Zone. The City has prepared a Subsequent Mitigated Negative Declaration (MND), to assess the addition of up to 139 multi-family units that were not covered in the 2008 General Plan Environmental Impact Report (GP EIR), which accounted for 1,399 multi-family units within the Town Center Specific Plan area. The Subsequent IS/MND determined that, with the proposed mitigation measures, there would be no significant impacts to the area.

ANALYSIS/JUSTIFICATION

The Town Center Specific Plan is designed to create a district within the City of Stanton that promotes redevelopment and incentivizes new mixed-uses while preserving existing residential neighborhoods and enhancing the district's industrial character. The TCSP is

designed to implement realistic and achievable project objectives to encourage development that will lead to high-quality mixed-use neighborhoods. The TCSP will serve as the zoning for the Plan Area and establish four new land use districts; Town Center Mixed-Use (TCMU), Town Center Industrial (TCI), Retail-Oriented Mixed-Use (ROMU), and Town Center Residential (TCR). The Town Center Specific Plan is a culmination of efforts that commenced in 2010 when an initial effort was made to develop a Specific Plan. Although the 2010 draft was not adopted, some of its goals and objectives were incorporated into the TCSP after community outreach found that they were still relevant and desirable.

The Town Center Specific Plan project was initiated with a public workshop, held on December 15, 2020, to introduce the project and obtain feedback from the community so that staff could learn the community's thoughts and vision for the area. A survey was also developed and posted on the City's website to gain additional community feedback. A second workshop was held on March 1, 2021, to confirm results of the survey and establish a vision for the Specific Plan area. A survey was also generated for the second workshop and posted on the City's website. The community feedback reflected that participants wanted a safer area with more retail and attractive streetscaping, as well as increased pedestrian activity and some suggested a desire for open space within the Specific Plan area. Development of the Town Center Specific Plan has been focused on remaining consistent with the goals and desires of the community.

The vision that was established for the Specific Plan was to create a new collection of mixed-use, residential, commercial, and industrial neighborhoods while allowing existing businesses to continue and preserving existing, single-unit residential neighborhoods. The TCSP intends to achieve this through the establishment of four land use districts, each with tailored development regulations to achieve the vision goals throughout the Plan area. The Town Center Mixed-Use (TCMU) district is intended to encourage medium and higher density residential development within walkable distance of retail core areas. The Retail-Oriented Mixed-Use (ROMU) district is intended to encourage a true "town center" by requiring ground floor commercial uses along Main Street to establish walkable retail frontage. The Town Center Residential (TCR) district is designated for the preservation of the existing single-family residential character within the Plan area as requested by the community. The Town Center Industrial (TCI) district was established to allow existing industrial businesses to continue while also including provisions to facilitate new artisanal manufacturing uses such as distilleries and tasting rooms.

The TCSP focuses on encouraging high quality design throughout the Specific Plan area and will serve as the zoning for the area. The plan establishes criteria for landscaping, lighting, and building types. Streetscapes and open space standards are also included in the TCSP to further encourage the development of a pedestrian friendly environment. Similarly, the Specific Plan includes a circulation and mobility plan intended to maximize access to existing transit and lays out a pedestrian and bicycle network throughout the Plan area. The Town Center Specific Plan is a long-range plan which introduces development standards intended to establish a pedestrian friendly environment.

An Initial Study was conducted to evaluate the potential for significant impacts that could

result from the adoption and implementation of the Town Center Specific Plan. As a result, a Subsequent Mitigated Negative Declaration was prepared in compliance with the California Environmental Quality Act Guidelines. The Environmental Impact Report that was prepared for the 2008 General Plan evaluated the addition of 1,399 residential units within the Specific Plan area. The Subsequent MND built upon this initial evaluation to analyze the development of up to 139 additional residential units within the Specific Plan area and determined that, with the proposed mitigation measures, the Specific Plan will not result in significant impacts to the Specific Plan area or the surrounding areas. A Mitigation Monitoring and Reporting Program has been prepared in conjunction with the Subsequent IS/MND and will be effective if adopted along with the TCSP, General Plan Amendment, Zone Map Amendment, and Subsequent IS/MND.

ENVIRONMENTAL ANALYSIS

California Environmental Quality Act (CEQA) and the State CEQA Guidelines, the City of Stanton (City) is the Lead Agency for the Town Center Specific Plan Project (project). Based on the Initial Study prepared for the project, the City has prepared a Draft Subsequent Mitigated Negative Declaration (MND), pursuant to CEQA and the State CEQA Guidelines, to analyze environmental impacts of the project and propose mitigation measures to reduce the significant impacts to less than significant levels.

PUBLIC NOTIFICATION

Notice of Public Hearing was mailed to all property owners within a five hundred-foot radius of the subject property, published in the Orange County News on January 5, 2024, posted in six (6) locations around the Specific Plan area and made public through the agenda-posting process.

Prepared by,

Crystal Landavazo
Community and Economic Development Director
