WISE ABOUT WATER CONSERVATION

**City of
Temple**
Department of PUBLIC WORKS

**Every
Drop
Counts**

Water conservation is important to all of us.
Let's think about it, and discuss.
There are many ways to help conserve.
Make sure you listen carefully and observe.

When you wash your dishes by hand,
make sure the sink is full of dishes, understand?
The same amount of water can wash one dish as twenty.
You save water this way and plenty.

Wash your clothes when the washer is full to the brim.
You can help mom by putting your clothes in.
Plant your shrubs with dad in the fall,
when they need less water, with no waste at all.

Spread organic mulch around plants outside.
Holds in the water and saves money when applied.
Look for leaks in your pipes, and make sure they are tight.
Assist dad as he looks, you can hold the light.

Sweep your driveway to clean, instead of using the hose,
the yucky leaves and dirt still goes.

You have saved a lot of water this way,
and conserved water you can use another day.

A-MAZE-ING

HELP FIND THE WAY TO
WATER THE GARDEN!

Reuse the water you wash your fruits and veggies in.
Water your house plants with it, the bucket said with a grin.
Shorten your shower by one minute and the good you'll do,
is save 150 gallons of water a month, this is really true!

Collect water from your roof to water your garden,
and water it only when it needs it, that's a bargain!
Tell dad to adjust the lawnmower to a level higher,
the grass stays moist longer, if a healthy lawn is your desire.

Keep water in the fridge, to keep it real cold.
You don't have to let it run, don't waste water, that's good as gold!
When taking a bath, plug the tub right away,
BEFORE the water is on, so there is water for another day.

Don't run the faucet when you brush your teeth good,
fill a glass with water, and rinse with this, you should!

When you want to play in the sprinkler on a really hot day,
you can water your lawn's dry spot as you play!

WHICH ONE IS DIFFERENT?

FIND THE WORDS

Can you find these hidden words in the puzzle and circle them?

When you are little kids, take baths together, it's fun!
You save water, and this has always been done.
When showering, turn off the water while you wash your hair.
This proves that water conservation is important to you,
and that you care.

Put a bucket in the shower to catch it
from going down the drain.

Use it to water plants, it's as good as rain.

There are so many things you can do to help save water.

Be a conservationist, and a good son or daughter.

The earth is changing and we must do our part to keep it nice.
It is OUR planet, and we need to take care of it
whatever the price.

We need water to live, and be healthy and free.
Without it, we could not exist, and THAT would not be pretty.

So do your part too and tell your friends,
talk about this in school, so your efforts never end.
Talk about this with your parents, and everyone you know.
Water conservation keeps our earth healthy,
with a healthy green glow.
